

Welcome to
project osic..

Where students open school doors into + with community as all restore its natural enhanced potential..

Interact + engage, not just for another, but for yourself..

We may be in **patches** + out of sight, but we are in for the long run + will keep coming back, as our walkabout reaches out + links with **pockets** yet to self-sustain in an exchange..

patches` + pockets` lets talk..

We thank those many that have literally fueled us, as we continue on, as in **Solar Motive** selling us some nice soft solar panels for our cabin top on our sail boat that we have lived in, while we did this work these last 5 years, serving us fine.

During this process **if we have offended any one or incorrectly used work** from you that you prefer us not to then please contact us. For i`ve done my best to contact all for permission. So if you let us know corrections, we will make changes, for we have no interest to interfere in your present affairs.

We only want to trigger your thought for you to define how best to relate + interact. **thank you!**

We suggest you grab a note pad as long as you are here, to most efficiently use this as a tool. As you go thru this, define for you, your students + your community how best to do what when, so as to flow into/out of, where you are now if in anything less than harmony or offering/sharing tools to obtain it, which we welcome..

For **this is about triggering your thought to prioritize your focus;**

To come aboard to **help yourself, while you cooperatively restore your natural enhanced local community..** Which can incorporate your curriculum stumbling with now + co_evolve it. Clearly define what to rid + excel on that which can better these thoughts + network so as to bring in new awareness that locally can trigger you to rethink. As old `ways are re figured + applied that work.

For **many people right now in responsible positions are over loaded with stuff** to see the simplicity of solutions. We feel with our limited experience of visiting several countries + going thru out the US, people want to live local + share what works so all do the same. So there is no place for exports or large energy farms to supply large manufacturing companies. To then interfere in other locals ability to self-develop their natural potential + achieve harmony.

+ Certainly **no place for a war mode economy when we can with early signs develop our natural communities** within their enhanced limits. For each to develop one self within one`s potential. + In do_in that we bring all together in a local walkabout, giving hands on as we welcome our local students to come out of the schoolroom + into + with their local community, as all focus direct to restore it`s potential.

As all **first work with teaching staff to not interfere in any one`s program now**. Rather co_evolve into a calm sense as together you define an introduction for your community to safely feel comfortable to open their doors + take part, as well come into school room with community when more efficient.

As all prepare individually for their local community walkabout.

Giving everyone hands on that are in need, that daily are having difficulty, as tallies are made, + rehabs are restored as skilled/business folks/local community that can, walk along side, viewing effects left, as together adjustments are made to enrich those that have yet to fulfill their daily potential..

In this process students will coordinate how best to make a tally sheet so as for each to log in, or one log for another unable, as lists of issues get resolved;

Giving the means for each person + each students to **log in + as each change roles, then share where one is at + their perception of what is needed**, for the next one to carry on. Then to have a group discussion from students of higher levels aiding students below. Then to have skilled professionals walk along side to see their effects left, as then all come to the table to rethink as rehabs are established/restored or rid, as all go figure what + whom best to resolve or fill temporary spots until one heals, learns or defines a more permanent support is needed.

Meanwhile the **students/community members self-observe defining how well their own perception was of the reality of the situation in real time**. As more come together to resolve. As great hands on learning tool, as we build this archive + share this process as different needs are meet + more offerings are exchanged.

This in itself **gives a lot of good science skills to be incorporated as common sense** becomes understood, of what truly sustains our fuel as a human species on earth + beyond. As you co_evolve your existing curriculum;

To integrate + engage with the conservation services as you restore them + all `boon within the natural world limits, addressing the many that have exceeded them as you bring them together. + **Welcome them to your local tapering transition that you + your community build.** Supporting all to rethink, heal + go figure, opening many positions for employment as we awaken the spirit within all to simply respect all life, give a helping hand, then all come rethink for your community `plan to restore your natural enhanced limits.

President Barack Obama wants to export to bring jobs to the US, as well build manufacturing companies for exports. This we cannot agree with + we ask you all to help him rethink. **Governor Mitt Romney wants to build business as he has in past,** yet we need to do some sharing of the ecological assessments behind these footprints from all the funds he has made around the world.

Never again do we want anyone to interfere in other`s ability to self-develop, as well limit one due to their environmental degradation as another abuses/misuses in negative development locally or for afar..

So **we invite all to take off their hats + as a human family sharing this earth + beyond, we invite all to see how efficiently we can restore harmony as we live local + network what works,** as we invite all to help us build this archive;

To share this process, good + bad, along with strategies + actual schematics of good tools. That we all can use appropriately to trigger thought as we review the like ecosystem/subject that we would then apply it to. + Fine tune within our natural enhanced limits. Working with our real in time tallies + engage with good science as you integrate tools to build + maintain conservation services that fuel your local community.

As you develop your interchangeable role, that we suggest, bring each to experience the goodness of these virtual tools. To come participate + post, as you/your students + the student within all community members, self-develop, as they network globally sharing what works locally. Fueling them to do the same.

Make a pen pal + share what you are do_in, explore as you pursue your desires, yet share this process fro them to do the same. As each take turn to post for their community, having some virtual time as they network. Posting for themselves or for another. Checking in with others to fine tune an issue.

Staying updated with your interpersonal + local community needs + offerings. Recycling, buying parts when it makes sense from afar, when maybe need a few locally, but not build large manufacturing companies that require you to then have to export + fuel more waste traveling.

As in the many now that **consume so much local natural resources, in taking raw materials/processing/packaging** back + forth across the planet..

Taking jobs away from local communities.. Contributing to people`s stress, illness + disease, not to mention land/sea + fresh water grabbing, depleting local resources from those that come in from afar, + also locals doing local damage, yet not held accountable locally or afar..

People young + old we have a lot of work to do, + this awakens that deepest within to develop. As we start reaching out/accepting, simply giving hands on with compassion as we uncover the root of what is wrong + make it right.

Sharing/developing tallies along the `way as we rid them with good solutions. + Let these tallies tell the truth of how efficiently we can resolve by networking locally + afar. As we define whom, what + where, to get to the bottom of what is exceeding the natural limits interfering + what can be done to recycle + replace it. What it triggers as then **modes of investment are then awaiting investors that go thru the tapering transition;**

Now well aware of the communties needs + offerings, yet **this time they invest in locals to control their own commons, making sure all development is ecologically sound.** As locals will continue as we suggest to have a path laid out that all will share as they pursue their local food/medicine sovereignty.

Reflecting with those you are fortunate to have that live simple working with hands on with what sustains them within the enhanced limits of their local natural world. As good science engaged in + integrated becomes a common sense. A comfortable understanding as you now fill in the missing links, restoring the worn torn threads. As good natural gauges are used + co_evolved with, such as **agro_ecology + the many indigenous/local ways** that we have, that many still carry forward + use + create upon.

+ Yes some have to dig them out of the files or retell the stories, search the museums, network afar, look at the earth under your feet, aha! **an awakening once set on a path for what sustains you.**

We can't share enough what a bi`joy experience this is, to experience other`s ethnic offerings from the much goodness the world offers in the many cultural experiences, that build conservation services. As people stay `boon with their natural world with good science as they engage, + integrate carrying these values + gauges every day. + It is this that has made us suggest, all to **start this process pursuing one`s local food/fish/medicine sovereignty, so locals work the wild sensitively.**

+ **Become aware** from the indigenous/locals/visitors, anyone with sensitivity + awareness to consider all life within your local community. Whether local or from afar;

For all to full fill one`s interpersonal responsibilities + full full one`s local obligations, to reestablish balance with our genetic bio-diversity so life can link globally, sustaining what we all are interdependent on.

These are the **local prerequisites** all students can learn, that will provide them tools to take part in co_evolving the curriculum to maintain a cooperative community. Fueling them to go anywhere to further continue their education + explore.

We know **local students can become natural engineers as they keep modes of investment on the cloth/table, developing a variety of skills with sensitivity respecting all life.** As they continue to create harmony within themselves + within their local community, filling the air with music as art is lived + natural community is restored/built + maintained as all celebrate along the `way, inviting all to take part;

Posting your events, reaching out to those unable, sharing with those new to town. As we suggest you to **review a `way do_in subcatagorie in our forum.** + 1st time thru, follow the suggestions please, for your easier understanding.

As you gain experience of networking, making pen pals, preparing yourself to continue to explore this unique planet + beyond.

As all are supported to build their path as they walk it into their opening, continuing their education, exploring, now skilled enough to get them into their choice to further learn in the local exchange as all appreciate + continue to live as a local, where ever they place their feet.

As we together do an exchange with all to make life simple + heal those left behind. Making every community self-reliant within it's natural enhanced limitations. Reaching further creating good markets, no longer accepting goods from a far or wrong practices locally. Rather students **1st do local prerequisites + maintain themselves + their community responsibly. As they rejoin themselves + their family, with what ever tools now needed. + Co_evolve sensitivity as support is put in place.** Then on to maintaining their school + natural community restoration.

As each give hands on to those in need, in interchangeable roles, **they/you will self-develop beyond what you could never imagine. + It took no lengthy high skilled training to do this, just simple respect.**

Yes it is so **good to hear all speak of welcoming all people to share this planet + beyond, as we define `ways.** + We can share the sensitivity to develop the skills to walk our grounds with respect for all life. So no one is left without

their parents. It is so fragmented for both candidates to think of children immigrating because they are here, yet their parents are left struggling + if so they cannot come along with them or may face having to be deported. This is not right, this is not what we do to our human family.

Nor is it right to just send back those that do crime, when yet **we can help them go back + get started in their community to develop**, as they do work exchange, defining their place, developing the student within. Meanwhile students afar can help as they pursue their interest to continue their education, + having gone thru the prerequisites, are now prepared to give hands on support to another community in need.

As they **gain incentives in education to do**, not to mention part of their original prerequisites will be to simply give as an equal participant. Without requiring anything, as each understand what building cooperative community is all about. **This kind of value cannot be bought.**

We invite you to help us build this archive for all to understand what we can do now, without any immediate further training, accept for the students coordinating to set up the local process.

Harmony is happening in **patches` as people simply live in `boon with their natural community**, awakening to their conservation services as they daily have their hands on with what sustains them.

In this archive we will **share with pockets` without** so they come post their story as other`s give feedback, + together all figure what is in need for them to harmonize as worn torn threads are replaced.

We suggest not printing to try to save trees for this same purpose. Not to mention use efficiently this pdf with all the links, that are nice to reflect with as you go thru this, or go back too, giving yet more idea, to trigger thought to apply.

Along with this, help us co_evolve + please use our forum + help us make it a good tool. As you develop your `way that works best for your community.. As students network, reflect, post your/for another/or as a representative in an interchangeable role for your communities offerings to be exchanged + needs to be rid. For all to come together + share locally + afar, as each take part in building this archive. +

Please be specific via like ecosystem/subject when you post, enabling others to go figure or give feedback, for you to be triggered to bring home what works;

We invite each community to come take part + post what works as well when stumped. We suggest in an interchangeable role, to let the students within all, see what they can do together. As schools communicate for those unable until able, as tallies are worked. **Leaving no one left behind. Leaving no one with interpersonal overload making bad judgment for all. Leaving no government layers of dysfunction rule**, when yet it does not pertain to your local enhanced natural abilities, especially if it exceeds + is interfering.

All need to **follow up responsibly + students can help all weed out the dysfunction as local tallies are collected**, helping all take part responsibly. So now a young student is do_in an exchange in the classroom before giving hands on, yet another older student gives them guidance as they do research together. Freeing the teacher, so they may further reach out guiding over view. Yet all come together + focus direct, making choices to gather as a community, not just for their own school.

Each tally made upon a negative will open positions to turn it into positive solutions or rid if not needed. Yes we suggest prioritizing those left behind, not having daily needs met, but we also want to not get consumed by it, for many folks limited can do a lot once their needs are met. + we want to show how a need not being met can also be a harmony not had. As we expose those that are without to share with those that do have the opportunity to enjoy the music + arts yet synch with hands on with what sustains them.

We share a project osic **tally sheet to co_evolve by all**, as we can't emphasize enough how nice to have bi`joy experiences + they don't happen unless we have a priority grip with hands on as we taper off negativity + into harmony within our human potential. So we ask all to share this + we will post it in it`s own subcategory for all to edit + add to, as we then adjust. please see it now as you go thru this, so you can add to it, while you get triggered going thru this as we have + share it with us please.

Giving those without, another energy to feel, along with a sense of how others prioritize the energy they have. Making choices that to many are new, as they `boon with respect to all life, letting these values guide them daily as they work with the seasons.

Rather now **Ex:** Bulk items are bought to **maintain all the schools**, so as a whole networking is done by the students giving hands on to those that work the community + the schools. Where tallies give a bio regional prioritized focus of each biome.

A perfect **Ex: for those of you that watched the presidential town hall debate on 10.16.2012;**

do you realize how humans process most efficiently when we do it in an application with real time issues. Especially when we do it locally with our community, without being interrupted, knowing we can structure a `way.

But have you also considered the many unable, please take a review again of jerry`s issues, explained in tally sheet, that still can be + should be addressed.

We are not designed as in the last presidential debate to go 1 on 1 leaving our cooperative community behind, pulling so much wasteful thought when yet homework had not been done + 2 people are trying to show 2 different maths..

It is not efficient, when yet students could of charted all this + still can, + thread the detail so math becomes a good science. vs. Fragment it.

Rather it is **most efficient when we go eye to eye with our local community +** go direct to those that are misrepresenting + make wrongs right. As we prioritize our focus, having something to gauge with + as tallies start, students network + get solutions. **So each representative is held accountable in real time** to be present + not speak for any able person, rather speak with tallies with a foundation from the students structuring, speaking for the community, so all work within it`s local natural limits with good gauges in place..

Where all are working for the shared focus. + As we prioritize local food/medicine sovereignty we are always on a sustainable path.

This **debate showed us the goodness when we apply, our neural processing in a shared focus, as with addressing real community while each candidate, then confront the issues..** But the down side of this showed how inefficient a local town hall meeting is when there is no sense of prioritizing as a community, especially as present giving each just a few minutes.

When yet natural communities that are sustainable sit down until all is comfortable understanding what is, knowing exactly how to follow thru when with what as a structure in balance with work/celebration is shared..

What is in real time + **let this be a lesson to be very clear laying out our proposed tallies as we all co_evolve this process,** making it a very efficient tool for each to plug in local details as you create upon this + co_evolve your present issues/curriculum into a smooth tapering transition.

See if we have appropriate subcategories on our forum as well within your local community, if you don`t use ours to start. Then make yours or continue ours if works + we can adjust with your feedback. + If do your own then continue to come back + post as a community on ours or an individual or for another. To give each a better understanding to find their place in community, as locals + afar come reflect with archive + continue to build it, as each research a GPS location + fine tune via like ecosystem/subject..

+ **Add it to your curriculum** to stay with your local community as you get clear on your potential. For some things if use good science keeps us in motion as life offers when we retain a healthy balance of mindbody. This is why we don't want to just read about this stuff, we want to live it + share it so all can be fueled from the natural world that all life is interdependent on when in balance, not just locally but globally.

So each realize how important it is for everyone to full fill self- satisfaction without leaving a foot print.

Nabble, LLC. offers this forum freely to us + to you. + Yes now does have advertisement that one can pay to rid, or pay to place your own. So please note the **advertising on our forum is Nabbls**, not ours.

The folks on **Nabble, LLC. are very professional in helping** all understand their process as they continue to provide for our needs.

We are sharing here + in our forum, links, examples, + a perspective after putting many hours in with those that are not so fortunate to still be here, or those without virtual tools, as we ask you to help us build this archive + reach out as you do your walkabout + incorporate our tools as you share this process, fine tuning for yourself + your community. Then come share what worked or what didn't.

We support students/community to reflect with locals that simply live natural lives as they share how they daily focus hands on with what sustains them, as it fuels them to share solutions with those unable to resolve.

Please send us feedback/corrections/suggestions/\`ways that you become aware of in your review, as you comment. That you know are more efficient from your experiences + place in appropriate subcategory on our forum;

i come to talk story

+ we will be notified in a follow up email of your posting, + soon will due a review.

Thank you Google + Nabble for your tools + you should find us with this name alone but if difficulty than here is the url;

<http://i-come-to-talk-story.3220728.n2.nabble.com/>

Lets make every day for everyone, a

Happy International Peasant + Earth day!

Together we thank **Nyleni, La Via Campesina, National Farmers Assoc., all the sustainable farmers/fisher folks, people that try to make the work place friendly supporting those that prioritize working the elements, young + old around the world that live simple lives, neighbors, family, friends on social networks** reflecting/supporting/representing many in the world, as in the recent Rio 20 in 2012, + others, as everyday of your life you share cooperative effort to build your natural community.

For what we do locally makes a difference for those afar as well!

We are asking all to share with all or obtain bulk/email school lists + representatives for communities without schools. **Please** see our introductory email on forum, if you want to send to those that we did not reach. Or **post these links on forum subcategory school bulk email**, + we will send out this introductory email below, also listed below, for all to synch.

We feel this is an efficient `way for us all to be on same page making peace an option now for all. As we share this process to downscale;

Lower our amps, restore within our natural possibilities, asking our self the effects we leave, as we understand our footprints + create natural self-reliant communities, that restore our optimum creative potential within our self.

Our universal synergy fuels us to **share sustainably, as we come together as a human family sharing our earth! No more letting resistance of titles to interfere** as with Democrats or Republicans, or Congress resisting President Obama, or Parliament, etc. Which ever government mode you have.. Rather **as people** lets come together in what common denominators we all share..

We support you to build your path as you walk it, into your opening responsibly + reflect with natural communities along the `way, leaving neither self nor any life behind. Experience plugging in + build/restore your local community, for all to live with respect as a local, where ever you may continue to explore. Leaving you/your community more self-empowered. While layers of dysfunction are removed, as each hold self + others accountable locally + afar.

We feel this material is best used if you experience it + translate it into good science fields, integrated as common sense to be used so all can understand + stay present in the moment. Present science is not humane if it is fragmented + life has no biological connection, for we are all interdependent on our ecological categories that cannot be isolated..

As together all live local, it fuels us to than **focus direct + share global linking of our ecological balanced local biome(s),** as students/community come together to restore it`s potentials. Fueling one`s path as each prioritize our local food/medicine sovereignty. So we all rid our misuse/abuse.

Only then can we stop leaving a footprint afar, as many now are interfering in others ability to simply live.

We want each community to welcome their students into

project osic

+ Come **together creating this as a nice archive to be a great tool,** as all work this forum. As your local community helps us build an archive to share this local process, globally.

If anyone feels this is wrong, then please come + share so we can make it right. Or if you have a better `way we will unite. As we are now offering to the UN Secretary General Ban Ki-moon, the World Bank President Jim Yong Kim + President Barack Obama..

We know we can` t just clean up our own back yard completely due to all the threads connected thru out the world, as we are both helpful + hurtful as we interfere, + that needs to stop as we put gauges in place to help us understand the truth within our reality of what we can do about this peacefully + take local measures cooperatively to do it, + unite globally as these threads are followed thru + resolved. So each local community then becomes self-reliant.

Many of you may not read this before US elections, but many will as **i share the importance of our participation in defining these tallies**, that have yet to be clear. As many people do not understand what they are supporting + what they can change.

i share an email i sent to Barack in his OFA campaign, along with many of you to share, but if did not see it, you can go into the forum link below. For she shows you how we have held him accountable to stay in the moment along this process + are open for networking/your help. as he reaches out in his marathon on 10.25.2012 to give you an example of how we need to take part + hold his responsible role accountable, as well our own.

+ help change the dysfunction that he alone did not build. as we break it up in clear small pieces within our local community + do it cooperatively with our human family sharing this earth + beyond together. as we restore these worn torn threads of good indigenous values that brought us once to the cloth/table eye to eye + with sharp sensors, + see now clearly the reality in front of us, to then do what we must peacefully, respecting all life. as we efficiently fuel our self + those unable, to stay present in our moment + go figure.

All humans have this range, we all at 1 time or the other had to work with. + as Years come upon is some more so. So see how in the moment we hold Barack accountable;

<http://i-come-to-talk-story.3220728.n2.nabble.com/people-please-make-space-for-this-review-to-calm-yourself-if-need-to-see-reality-of-stopping-anyone—td7559365.html/>

We can grip the wrong doing from each now, before it gets worse. + Use it as we recycle opening many more positions right now as each person gains the opportunity to come to this platform thru their local students + share what they are perceiving + start to form your community tool shed as well your local tapering transition. Let`s co_evolve where best it should go.

Not to mention in this process **give hands on to those you feel in need,** left behind as well your local tallies showing a now coordinated effort to rehab in groups as rehabs are restored for each person to gain tools to be self-reliant + pursue do_in the same.

Or correct your perception if you thought they needed yet they didn`t. + **Be clear** if one does not accept, not knowing then this is when the cooperative effort can reach them from another `way + it is your responsibility to follow up on this, because your feelings are important + you want to make sure you understand the early signs that can be worked..

As together you build your local community to harmonize within it`s enhanced natural potential + all do this by simply sharing a focus, that stems from people sharing what they perceive in real time.. + Together we all part time see what we can do helping those unable as we focus direct efficiency globally, utilizing the synergy from good folks simply sharing respect for all life that live as a local..

For **no one can be an island by themselves**, no one can just live in their back yard for long. We are all interdependent on each other + when all harmonize it is special.

Yes equally within your part time potential now remain open to your ability to allow all to help you self-develop as well bring your goodness to your community..

+ **For some that have done much work, don`t just let the missing links of life, of good science that fills in the details, lie in files, network + see it applied** appropriately. Make space to update your reality once reflect with this forum/archive in the building. Within yourself + within your cooperative effort now as you restore/maintain yourself + explore your natural community as together you awaken to life you never experienced, locally + afar..

If you take part/reflect with this supported cloth/table focus directed by all for all, no longer will any one fragment, as in allowing a community representative to mislead your real needs + offerings. **As all hold self + others accountable.**

We want real tallies locally + afar to guide us. So lets share this building of tallies as we set up our local structures + bring in community to help. This is why we put up this pdf of **project osic** to reflect with, to let it trigger your thought to run with your reality of your local issues + offerings..

Supporting students with in all, to **see what many in patches` are already do_in to harmonize**, as they have their hands on daily with what sustains them..

We could not finish editing in time for the Rio-20 Earth Summit of 2012, sorry we put up a rough draft, but knew many of you could take the best of it. + Even now this is not about being accurate with dotting our i`s, this is about prioritizing function, energy efficiently, so you experience the result, with your creative energy flowing/correcting, helping us make it a good tool now..

Meanwhile **with your goodness, we welcome you to continue to co_evolve it** For this forum/archive can be a very good tool as a platform for all, to come talk +

together reflect, as each feel solutions to fine tune via one`s like ecosystem/subject + create upon them as you engage with your earth/sea/air + freshwater. Building your local community + another that you may choose to be part of.

We continue to clean this up to get done hopefully before elections. Why? Because we feel this time gives us a lot of potential to participate in making our communities work. + Barack + Mitt cannot do it alone. So as to let tallies rule as we invite republicans/democrats + those with other titles locally + afar to **take off your hats.**

+ **Lets seriously look at whom will resist least allowing all to participate** in locally taking responsibility, no more allowing their inability to take the time to work with all to see our clear choices for efficiency, so as not to interfere. Rather we share + they become a helping hand.

As a human family responsibly self-develop as you restore your communities natural offerings now + simply share what works.

+ **In these tallies of discovery hold yourself + others accountable** to rid the social-political dysfunctions.

Ask them now to be clear + know how you can work together in figuring out what is best for your local community. + how best to help them taper down the waste. Which then fuels us to be clear what is good for others afar, as we respect them to do the same.

If government officials don`t make sense of these important issues, + stop the waste that has programmed so many to continue the war mode economy, spending so much in weapons when yet we want them to stop being made. + They don`t come back into their local community + hold themselves accountable as well the dysfunction of their government position that they get paid plenty for, + come eye to eye as you cooperatively restore your community, + require answers to all these issues.

If they don't then we suggest all take part to stand up for what we can do now as people + work together.

Have a revolution, if that is the most efficient way, + students again can do the math as we focus direct + figure this out.

As we restore the wrong doings + continue do_in natural enhanced potential within every local community on this planet + beyond..

This does not require high tech skills or more education that prevents you from sharing hands on as you volunteer or do an exchange, as you work your way into what you want. This no long term commitment gives you space to rid your baggage + explore, sharing/resolving real issues;

To see clearly the misuse/abuse that produced it. **It is these layers of fragmented information that leaves us with mixed signals that keep many from finding jobs now.** As many have lost their ability to focus cooperatively for local living. Or many never did have it. When so many are focusing to give afar. Or preoccupied with own stuff, leaving many unattached with hands on with what sustains us. Talking about what was. Or blaming another, etc. Or simply riding on another's wave.

This kind of thought is not how we are designed, our neuro processing gives us mixed signals in result of this.

For each community is in need of an abundance if we cooperatively responsibly act to build/restore/maintain our natural simple communities.

We think starting with obtaining/control your cooperative food/medicine sovereignty for your local commons clearly can pick us up out of this mess + make a nice path for us to follow. As you than walk it into your opening. As all support each to do just this. As rehabs simultaneously are supported aiding those to do the same.

Developments that are wrong, taper them safely + we know Barack your 90 million in green economy is not all conducive to locals maintaining their local commons, or ecological assessments that should have been done, where they. Please show us. i`m still awaiting that answer to see what went with the MOU with each development. To set me straight, so if anyone is aware please share it with us. **Not to mention go back + review Mitt Romney`s many developments from his investments + gains.** Seeing his footprint left if any + see what each will do to help us all make it right.

Not to mention what really is fueling the war mode economy + it`s footprint. Which students will show threading from each local community, so now all see clearly the whole story as we work for transparency.

Not address this just by your self, but collectively network so all become aware to help + recycle as you share + reflect.. As all are invited into your local tapering transition. Same with stopping the exporting from your local community to go afar. When yet **your local community needs these wild natural resources to aid the balance of your wild genetic bio-diversity, for you to self-sustain.** So we then can link globally, fulfilling our local ecological obligations, along with prioritizing our family compassion for those without, as we come together + define.

Don`t deplete your sustainable resources locally, to send afar, leaving you to receive processed farm fed, unnatural over fertilized, toxic + most likely GMO seed products. With unfair trade unable to save own seeds, etc..

As people, we hold our self + others accountable, forget the business titles. People are manipulating for greed or no good sense of ecological limits, maybe not intentionally, so give them the benefit of the doubt. As they deplete. **Leaving locals without** as others gain as local land/sea + fresh water is grabbed. Realize we can come together + stop this so all understand, if we focus direct now;

+ i suggest even as we view or take part in conferences as in this UN Civil Society conference + do it in a manor, where what you can apply in your local community, can be worked now. + Address these real threads that enslave you or interfere or that you want to break + use this platform, as well perhaps together we co_evolve **project osic** with best resources. Check it out;

<http://www.worldwewant2015.org/user>

In this process all students within us all can do an exchange + start showing own + each other`s tallies, of wrong doing, as solutions are resolved, fine tuning those issues of whom, where, why + what it will take to hold self/locals accountable locally + afar. Letting this be your voting choice to responsibly do your part. As we rid a dysfunctional election now + continue to work in a tapering transition, no longer accepting another layer to be put aside or added to, rather co_evolve it. Meanwhile until this happens, welcome these folks into the local tapering transition + together prioritize real local needs/offerings + reflect.

Together we can link not only good solutions already being lived but also our understanding of our need for our balanced local genetic bio-diversity as our best medicine.

As we sharpen our sensors.

As we continue to **understand this is our life sustaining force on this earth.** But more important to give real time information to us all for each to self-develop so the dysfunctions of government end as all come together as one. No more waste left in layers locally + beyond. So we can better redirect the energy as well the resources as we reduce our tallies.

Can you see the job potential just to here? You can come aboard in your local community + work for this change;

It will fuel you in many `ways. Together we all need each other, so please don`t just rebel, rather support yourself/the students/your community to focus

direct + reflect with all. Thread the questions + get the answers as each rid own baggage + stop the misuse/abuse that steals from our moment preventing us from adding the harmony many are fortunate to have.

If you like what you hear, do your chores, make space + grab a note book + jot down some thoughts as you calmly take the time to review this. Please finish all of it. i`m sorry i can`t do it in less words, it is a me thing. + We invite you to share what it triggers. After you apply to yourself or do both. So please keep reading part time as you full time start working within yourself + your local community now.

Whether there for long run or not. **Daily if we have hands on with what sustains us, it fuels us to live as a local where ever we choose**, if you are one of those so fortunate to freely explore. As we ask all to work toward everyone having this as their option.

We can rid our baggage + co_evolve maintaining sharp sensors, not allowing anyone to speak for us, if you are an able person.

Together support rehabs to support those unable to participate, to take part. + for yourself, if you have an accident. As well share the local tapering transition so locals are supported to rid all the layers + **sort out tools for what is to remain in the moment for all, to become a local, global + beyond responsible participant.**

Not to mention **start your local community shared tool shed.**

Right now you can do **hands on training** as these issues are worked at.

We can make a good science verbiage from our positive acts, to be used by all languages to co_evolve in real time as all continue to create unique cultural exchanges as each reflect + support each other to self-develop as we lower our volts + go figure a community `plan utilizing the elements. **No more going forward only, rather now the footprints left behind also get worked simultaneously.**

You may say this is bad enough reading a book let alone even think of bad science as being another religion. Well it's not. **Everyone of us every day in micro moments perceive + can apply once we edit, as we can listen to our early signs + learn when to act on what.** But we have to make space to do our homework.

Those of you **late in doing this create your own mixed signals, leaving you than enslaved by yourself** or chasing misuse/abuse. Either way we can harness this so you build a center that you know when truth is real or not. But we all have to do our homework + believe me **cooperative support in collecting these tallies can be very supportive;**

Making this process more friendly. As well as President Barack's MyGov Fellow program that all are invited to take part, started in August 2012 for 6 months. As he wants to make government more friendly for the people, by the people. + You folks outside of US can review these thoughts to trigger yours.

Only in 2012 can we truly reflect with our global community as i shared this in **Barack's MyGov** + asked Joe Biden + him to take a review as well, to see now what together we all can do. As we grow from experiencing what you do, as i suggest all to take a review of **Iceland's revolution.** As we have been following them in the world markets long before any media talked about it, here is a few links to start, as you search more + discuss these values;

<http://www.facebook.com/Iceland.Revolution.Project>

<https://www.facebook.com/photo.phpfbid=383812011678945&set=pb.321400234586790.-2207520000.1350003471&type=1&theater>

For many are **preoccupied just in trying to survive, when we can redirect this energy** + go beyond this, as well beyond prevention, as we simply live natural lives where we are self-satisfied yet leave no footprint on any life.

Yet be very clear how to taper into simple natural living..

No more pockets` of story of how it once was, or being fear based, now you can become aware to **live daily** to fine tune/**interrelate** with your own community as you **engage in experiences`boon with each seasonal natural offering**. Fueling you to want to explore others. As you take it upon yourself to take part.

Please have students **create a structure that works with what you/your local schools are involved in now** to work into your + your communities natural potential. **Don`t let us or anyone just disrupt your hard work.**

Introduce yourselves, give hands on + accumulate tallies as each do a walkabout with local community of what is important + **share in like subcategories on forum to build together this archive + rid these worn torn threads as you build new ones;**

Share where stumped/strategies/schematics that work triggering others to fine tune for their condition/like ecosystem/subject/appropriate ability for each to comprehend an interpersonal + community restoration that calmly co_evolves..

Ex: many are left alone with daily chores not being met as they are ill, unable, inaccurately judged due to others negative effects leaving them over stressed, having to comply, accused wrongly/fragmented judgment having fines accumulate. Or how about the waste locally that consumes resources locally + beyond such as the depletion of your ability to live self-reliant, as another comes into your community with a **false green idea still programmed from the industrial revolution.**

We can now locally come together in a tapering transition as good science equates nature`s limits as gauges are used as in agro_ecology. Leaving you as a local to cooperatively define, protecting your commons. Vs. large development which interferes in nature`s ability to sustain you or your locals, as **proceeds are taken afar or even if they buy you locally..**

As an environmentalist or not, we must get clear on all the threads linking our sustainability. **Ex: when wave energy buoys** are put here locally a mile or so may

not appear to interfere in the many miles of crabbing, but it does. For when you understand how fisher folks work they put a line out + these pots waver, so now a mile makes a big difference when it is on the path.

This is the bad science that is being fragmented. So now locals that catch our food are interfered with when they are already over regulated. + where are these resources going to whom? When yet locals are not self-sustaining. + Layers keep piling vs. sitting at a table eye to eye to those known sustainable good fisher folks + 1 entity as we **suggest F+W to open their ears**, no more multitasking as they do not hear real time issues, as many locals believe. So right then solutions could be had as both talk + listen.

Plus the rushed focus to do this could of helped locals focus on other important issues that still are not down such as addressing the over regulation + taking responsibility out of the locals hands, from what once worked when they took care of the many local requirements that fueled their fishing industry commercially. Leaving them at higher safety risk, which we hope the changes in the Maguson Stevens Act will correct + ask all to participate in their upcoming comment period in result of it.

Many say well when is it good to utilize this free energy, thinking it is free as in wave energy, which i've seen it consume many good minds to even put an agreement together so as not to give it cheaply, which almost happened in fragments here in Oregon.

+ Many are not even ready to address the leasing part to those afar.

This **should only be done with good local ecological assessments as the tallies show** when our local sustainable ecosystems/biome(s), that are dependent on healthy land/fresh water flow to sea, is in balance as many are not. As each of you complete your community `plan use review, for all locally to be self-reliant on local sustainable wild systems. + Share these tallies.

Leaving no ecological isolation of any category. For they are all interdependent.

Do you see this difference in leasing, gaining profits as these local resources are taken afar, meanwhile your selling what is needed to locally sustain you, if it interferes in locals ability to self-sustain your commons. + We suggest starting with your local food sovereignty giving clarity for sustainable development.

It makes a difference, you watch what tallies will say + how they co_evolve into good acts or rid what never should have been created.

This is **happening across the communities**. As what many think are solutions, are unskilled interfering, abusing, while sustainable folks are over pressured + are not going to continue to comply, as many already will not take part in the many regulatory boards. For it takes away from their energy to survive. + Many have left, leaving some that could of gained from their good seamanship. While yet others are over loaded as they experience these realities, trying to make a difference.

Not to mention the **largest footprint left from the war mode economy** in your local community. Or people chasing greed ignoring respect for others as they **grab land/sea/freshwater from your locals** as they do business unethically, than to leave it depleted, meanwhile no one holds them accountable locally or afar?? When yet it is undeveloped children in adult bodies carrying behavior as grief/revenge/truth + justice is being enacted all at once with no cooperative energy as sides are supported wrongly as they are given weapons to interfere in solution building. Too many pulling in different directions producing the disassociated energy that then many target wrongfully.

We can harness this energy + sort this out + taper it down as we work to end it.

As many are unable to take the time to do this follow up, which is what we hope this archive will do as you post this detail. This list of tallies showing this detail so you locally can work it + when can't easily than reach out + network to see how others have come to peace.

We want you to post this detail as a local representative gives detail of who is supporting those locally + afar to conform to aggression that is not clear. Who is building these weapons + what entity name is it under + other affiliates that support them or produce products + services from the sale of weapons to do this. So we show alternative natural ways to replace these products + services. So locals have security in sight as they change hands on.

Your local tapering transition will welcome these people as you share your local + afar effects from these negative acts. As you reflect with those that peacefully share these worn torn threads of origin, for understanding how this way is no longer an efficient way.

As you reflect with the worlds overview that want to live local in peace + network what works for all to do the same. Leaving them to rethink if they want to be part of the problem or part of the solution, as they are supported to heal + sharpen their dull sensors, making wrongs right as then they come back as a local, global + beyond participant.

We want to see the communicative process that is working as you come to cloth/table + peacefully work thru the details, as we utilize our now tools to see clearer as we rid our own baggage, holding our self accountable, along with others

It is easy to control another + tell them what to do + feel falsely empowered, only than to not understand why you are not totally satisfied. When yet to aid another to develop them self is more challenging + it takes a centered self maintaining sharp sensors to perceive + not interfere in their ability to self develop.

Do you see how these ways differ? Do you see the positions to be filled in sharing this understanding which does not require any one to be highly skilled.

So you may ask how much more education do we need with so much already given. Yet many with big school loans are walking unemployed with mixed signals leaving them inter-personally unsatisfied because they simply are not clear.

Yes we need enough education to simply know our self without being fear based, without the programming so many have due to being repressed, suppressed, misusing/abusing + this lists go on. Sadly our neural process allows space for each mode + if we don't reflect + go within + work this baggage it self-enslaves us. Giving us mixed signals, leaving many now trapped unable to sort this out alone. So it is not just money many need.

The **point is distress is a distress, period + we can help each other harmonize.**

This you **address with hands on** as you walk with your students/community + share in the classroom tools along with on location so as to engage good science as you integrate + apply real solutions from experiencing these real issues, **so now everyone knows how to hold their ground**, etc.;

As many lessons are exchanged with community workshops/applications to resolve or in the process of **continued support from other students to students** with community members as each local shares a tapering transition on location.

As you **do a walkabout eye to eye, focus on an issue real to you**, than simply as you share this thought, realize the missing threads that have kept you from intervention with your local community, + don't stop their, define what has kept you from your self. + Please realize by posting/ taking part in building our archive, you will realize how we take part in supporting you to self-develop. Which gives you a means to start.

Please accept nothing less than to live a natural life cooperatively restoring/maintaining as you engage with your natural community locally now, whether short or long term stay. It will give you a good sense of yourself to carry inner-personal tools helping your further define you..

Leaving no isolated ecological category.

Understanding is important, for you start with your idea yet to reflect with your cooperative community which now shows you perhaps another way to resolve, as you awaken to your local communities natural potential, then to understand our ecological need to link globally.

Fueling all for a win win situation, as we reflect being fortunate to have this network + others to link with.. supporting each to sort self out + engage as you explore + apply yourself locally fueling you to define where afar if interested.

Giving you clarity to than share with locals or make a pen pal as you sort all this out. Which opens your door to explore as you share like mind. + Now you have a great beginning as you each work your like ecosystems/subject as you complete your prerequisites as a student. Or until you finish, you may want to explore another, not to mention a true personal travel guide once you reach out farther + actually meet in an exchange..

This fuels us to work hard locally + celebrate along the way;

As tallies show us our reality locally as we define how negative issues are producing these **pockets`** **without simple survival mechanisms to overcome misuse/abuse.** + It is the student within all of us, that can identify this detail for change as students support us to bring these worn torn threads to the cloth/table to rid. Reflect with locals/afar + fill in the missing links, that many can not do/have no energy to do on own + restore peaceful solutions.

As we all **share simple respect for each to heal + sharpen our dulled sensors as we gain the harmony** many are fortunate to have lived + **still living in patches`** which the campaign doesn't mention prioritizing a good science of **not reacting but initiating.** Stopping this fragmented science as i tell Barack + Bill Clinton as they invite us to participate + win a chance to go with them on their trail, in their campaign support.

Which to us, is a **footprint we will not do**, when they can pick up the telephone + we can schedule a talk from afar. This way all can go forward with what is important to each + believe me, i send a lot of feelings to these guys, as well offered to give them freely our project + or merge with resources more readily available to reach out globally. Now as with **Bill's CGI 2012** conference, **Barack's MyGov** + to work part time as a peace inter mediator with them, as well to UN Sec Gen. For this is the type of community building all should support or change there offerings as they now state what they do, which i suggested.

i left comment after hearing Ban Ki-moon speak at CGI, with President of World Bank whom wants it to be a bank of solutions. Which they reach out for solutions that we have, + i could not believe how they spoke of so much resources not being effective. i could understand if they just started their business. So it took my breath + all i can do is offer + suggest you also to consider. For many of us feel these people are part of the problem + until they inter-personally understand their effects left + change this impact, they will not resolve, for it has to start within each of us.

For each time a loan is given for someone to develop + go beyond nature's enhanced limits, we will go forward + have to backtrack after it interferes, which we can be more efficient + plan this out as each local community networks + sorts it out so 0 impact, realizing we have people to reflect + guide. As with a speaker at CGI, sharing his story putting impacts into perspective that only **6% comes from carbon neutral + 0% impact, rather like 75% comes from raw resources + processing**. i could not articulate his name but he was on a panel with Lynn whom was a professor + had written the book; **Shareholder Value Myth, so they where good**.

Sadly the conference was fragmented + yes it has taken us a lot of experiences before we got our flow thinking it can trigger solution. Even though we realize we are not polished, a lot of yada yada + errors in spelling, but we really think this should be done by all reorganizing our thought as in UN, our government's role, our community role for self-reliance. + **Build government as a friendly part supporting self-reliant communities everywhere, as we share what works**.

+ Stop energy + resource waste, stop those lost in layers while we sort this out, where they need the students to walk by their side + aid the rid of these layers. While they themselves come back as a local participant + an interchangeable role needs to be put in place, which if you focus direct + network as we globally think this out, you can then have your students make this as a challenge to utilize their energy potential;

No long term anyone, rather all should co-evolve + no one should get paid for the mess they now are in, not to mention they also should be supported to enable them to heal + come back as a community participant. Which when these roles consist as they have they easily can consume one leaving them unaware of the true pulse of the local community they represent. Leaving them unable to sort it out, after they are interfered with by these layers, etc./over regulated, unable to stand their own ground, prioritizing with those that work their elements.

No 3 min town hall meetings or a few lectures/gatherings are going to resolve this.

Not to mention **stop investment the way it is**, that is the cause of many peoples misuse/abuse as our natural resources are depleted or taken away from locals, with fragmented science being practiced. + welcome them into your local tapering transition.

We need a vibration that reflects life simply, to share this path + we offer that with simple folks do_in which we invite you to our forum + together use this virtual tool to make your cloth/table platform as we suggest in **a `way do_in subcategory**, to bring your local community together eye to eye. + review all subcategories 1st time in.

Where you **welcome** your community + **explain more thru out your idea** of what to do 1st in appropriate student levels for classroom sharing. **Combine what presently being worked or replace that soon to be finished + see what**

forum triggers?? For some ages comprehend + others cannot, to get to know community with an efficient exchange.

As schools merge with this

project osic

with several communities locally + network afar.

Gaining from our worlds offerings.

You may think you can't do that, well once you gain alignment with your daily chores when students in interchangeable roles aid your needs, it will be **amazing how your fuel ability changes**. You now may be able to tutor a young one or share some excess food your garden may produce + share these lessons with another as you work what sustains you, while the older students work on other issues + young yet another.

Helping your community go figure another way for students to learn yet not be left hungry is real support. + This can happen as community becomes the best extended classroom. Merging home schooling with the goodness the classroom + community offers, truly co_evolves all involved.

We are talking about stepping stones of cooperative engagement. Where you update your needs + offerings. + When we understand this, we speak up earlier with real signs that now easily can be over come much easier vs. awaiting for diseased states, etc.

This **can be figured out starting with a shared interest/issue**, as you than prioritize, networking via like ecosystem/subject, bringing shared focus to real priorities.

Then **as participants all experience your wild genetic bio-diversity becoming restored as stories/acts are shared of what was + what is, + what can be.** As you define folks that are still do_in + network via like ecosystem/subject to trigger

your enhanced restoration within your natural limits, that sustains your community. As all open to the reality of our interdependence on this life migrating, leaving us dependent on all biomes to link, leaving no ecological isolation.

Only this fuels each of us to define ones path as each walk it into ones opening.

Where all are supported to take part + define **who best as each exchange roles as prerequisites** + invite local professionals for their continued education to join in the walkabout to address real needs as all develop our needs + share offerings, admit mistakes + students get hands on experience as all pool thought + make corrections, co_evolving in real time..with the many good folks already do_in that we can link with.

i share my email to Bob Schieffer for prep for questions for the presidential debate 10. this Ex:

thank you `Just Foreign Policy` for reminding me of this.

as a mother, grandmother, a family member, a local community member + one building project osic with many very sensitive skilled folks, soon to be released as a pdf on our forum – i come to talk story;

to invite students to come out of schoolroom + into + with our local communities, globally. to give hands on to the many without, restore rehabs + curriculum to co_evolve the natural restoration of their community as prerequisites are filled, as they network afar. then with support bringing all to the cloth/table to then prioritize globally what is ecologically interfering in our ability to sustain locally. for we are all interdependent on each other.

+ we want all to become aware to cooperatively build their local community so all can become a local, global + beyond participant as we share this process, in an archive. that we invite all to help build. As we share what works + doesn't as

we link prioritizing all life rights. For all is needed to understand + take part to inter personally self-develop, to make this work.

when 1 natural biome is interfered with globally, it breaks the required link for our natural world to efficiently sustain all life, locally. we can stop the stress + suffering on this planet as we allow students to fine tune these threads that are worn + torn leaving many community members unaware of what they support, leaving negative effects afar;

or many have no community cooperative structure in place to fuel them to let go of a job as they see many positions needed, to stop the war mode economy, as well the false green economy, exporting, large manufacturing depleting local resources that then go afar, as all of these acts then interfere in locals ability to self-sustain.

leaving more frustration, many without as even here in US. then to be attacked. for the human mindbody experience can only handle so much distress before it reaches out like our organs left with so much disassociated energy. Fighting stealing as each trying to survive as in the survival of the fittest.

We together can harness this energy + redirect + taper off these negative effects bringing many positions now to each local community globally, as we restore + only share what it takes for locals to build on their locals to reach out farther locally, for all locals to self-sustain. Not become dependent, not accept waste traveled from afar as it depleted locals from afar.

Rather this local self-reliance then networks as true stories are told now super ceding the misinformation or the break in information that as proven to happen as in the ambassadors death in Libya.

So what about the drone attacks or any military strategy same to go wrong. Not to mention if if went right it is ecologically destroying life + natural habits that life is dependent on. Same with large energy farms when no ecological assessments. Bill we have many in the world not being held accountable from

US, as they go over develop, land/freshwater/seas grab, leaving many without, same with other so called developed countries.

This has to stop, + ex; project osic plugged into every local community will show these tallies. I told Barack Obama all this continually in his OFA, MyGov + email to Whitehouse, as well Facebook/twitter as we have progressed putting this together. For we hold him accountable now as president. Not to mention the dysfunctional Congress, etc. in government that also fights him + each other, that we will no longer accept. But we will welcome them to our local tapering transition as they once again become a local participant, as all have an opportunity to walk side by side.

In fact I share this email also with Barack now, for this transparency is what will lead our path for all to be supported to build theirs as they walk their life into their opening. + we all come together so all can share this earth + beyond.

Bill you have a powerful position here + we thank you for taking the time to seriously review what we say. For many not so fortunate that have fought for peace where not so fortunate to live, not to many we work daily with many left behind in so much dysfunction. As we speak for many without.

So we ask you to ask them the footprint that their policies/thoughts/acts/investments have left, + what % produced what we talk about above.

Both the negative of many suffering locally, globally, as well the goodness of having these virtual tools, the links, the ability for these folks to remind me + connect with you, which we can create upon as in our project osic, which we presently are reaching out asking UN Sec Gen Ban Ki-moon, President of World Bank Jim Yong Kim + all we have given to Barack Obama, to take our work + merge the goodness with their better tools, for Nabble helps us with their forum offerings + technical skills, but we area grassroots, just recently a US non-profit 501.c3 assoc.

+ I offer freely my part time for the betterment of all. Yet no response to date Nor donations yet. + the IRS was totally confused over several years, + even the US/Bill Gates Wash for life Grant we applied for + didn` t get. But we told them it is all these practices that are not working within natures enhanced limits that produce these not just 5 countries poorest, but ever local community globally has people/life left behind. + it is these fragmented science acts, allowed to take place that produces them, + all have to hold self + others accountable..

this is not happening. Yet we have good science that can over ride all this if we stop those from purchasing/interfering for their own fragmented agendas, from this long over due programmed war mode economy, that we hold even you now accountable to ask these important questions for all of us please.

For our tallies will show this detail as all have the opportunity if we stop this bipartisan inefficiency, merge + responsible come together as a human family. So now students curriculum co_ evolves with humanity as all restore our good science as common sense, yet it awakens life within us all, because it connects us with our universal earthly energy.

So we suggest as in the revolution of Iceland, which sadly was not talked about in US media, yet the markets followed early on. if all does not listen + act responsibly, + we don't want to interfere in efficiency from all voting + co_ evolving. But rather than people being pissed, we want to channel + redirect + build sustainable working communities that we know can work.

for we have many good folks fueled by their simple natural living that do just this as they daily have their hands on with what supports them + it is these simple folks we will have students network with now as they awaken the spirit within, do their homework as the student within all surfaces that disassociated energy that ate away at all organs, + now this abundant energy will be a synergy that all can simply just not image as peace is an option now if we share what works.

+ to think that Israel has been allowed to leave such a negative footprint in their incomplete science of peace non negotiating is so wrong, when so many have good sensitivity + skills to show the illness in these people that delay/assume/misjudge/not care of the life that is effected as in the many psych/medical reports from children + elderly suffering with these negative acts, yet to think as a political ploy or perhaps the real issues of wanting Iran`s water, or simply ill people unable to restore healthy neuronal function, leaving so much continued chaos is unheard of, yet in responsible positions, + the global governments support it, shows just how many positions are now available for all the work needed to restore good science, good health for all life.

In each local community. + we will show these tallies so people gain understanding of how each of us are also supporting it + stop as we taper off + into security from our forward path of prioritizing our local food/medicine sovereignty, opening many positions that before have not been seen, for there is just too many layers of contradiction, that is beyond one`s healthy neural comprehension, let alone so many filled with baggage from the earths scars + own misuse/abuse.

leaving people with baggage they are unable to process, not to mention no correlation with good community networking locally + afar, which project osic intends to do as we reach out to our human family locally + beyond + stop the production + sale of all weapons, as we bring all to the local cloth/table + build a real `plan with gauges as in agro-ecology as we prioritize for each community the support of networking for all to prioritize local food/medicine sovereignty to start the path;

bringing all locals to become sensitive as those indigenous we are so fortunate to still have can show us how to maintain + work their commons, so now they invite their local investors to their tapering transition, so as to rethink, make wrongs right as students lay out modes of good investment, now changing the global markets mindset, as people do not need all this training now, they need simple respect + compassion + share hands on to heal, become whole.

so now they each are aware of local limits working within the local natural enhanced abilities to remain local, share what works as they network with good virtual tools as we are building with our forum - i come to talk story- this platform to build this archive sharing this process. no longer leaving anyone left behind. rather now with our tallies we will show the who, what + where, + a `way to taper out of it + into what is needed to rid priorities locally as students give hands on, + many positions open now with people understanding these links.

saying no thank you to all those leaving negative effects, that we have found peace another `way.

So we agree with below + ask you to rethink all of what we share above as we feel we should have no drones either as well any weapons, we should go eye to eye with dignity for all life. Same as it is wrong as in the Midwest when a line of hunters blast at deers, when 1 on 1 is fair game.

we give our sincere thanks in aiding this debate.

peace, kara j lincoln

We urge you to also ask `Just Foreign Policy`'s question on drones—and to press the candidates on concerns that have been raised about drones—during the foreign policy presidential debate scheduled for Monday, October 22.

In the last four years, the use of unmanned drones to engage in so-called “targeted killing” has escalated dramatically. In Pakistan alone, US drone strikes have increased five fold during the Obama administration, according to the Bureau of Investigative Journalism, which tracks US drone strikes. [1] Drone campaigns have also expanded in other countries, such as Yemen and Somalia, and recent reports suggest that the administration is considering further expanding the CIA drone fleet and using drones to hunt down the terrorists involved in last month's Benghazi attack. [2] [3]

Civilian casualties continues to be a serious concern for US drone policy. Earlier this year, the New York Times reported that the Obama administration is counting every “military-aged male” killed by a U.S. drone strike as a “militant.” [4] And last month, a report by Stanford and NYU researchers uncovered disturbing evidence that the US has been targeting civilian rescuers in "follow-up" or "secondary" drone strikes. [5]

Yet, the Obama administration has failed to engage substantively on the morality, efficacy, and accuracy of US drone strikes. Nor has Romney been asked a substantive question on how drones would be used in his administration in any of the numerous debates he's participated in.

The Commission on Presidential Debates reports that the topics you have chosen for Monday's debate include “America's Role in the World”, “The Changing Middle East and the New Face of Terrorism”, and “Our Longest War—Afghanistan and Pakistan”. Considering the fact that drones have become a serious source of tension between the US and Pakistani governments, and that drone strikes have become a cornerstone of US policy in the Middle East over the last four years, the candidates ought to be pressed on the issue of drones.

Please ask the candidates about their respective drone policies and press them on concerns about drones during Monday's debate.

end..

begin.. how do we even begin??

Free Trade has caused many to feel they need to protect it or do you? This mixed signal of why people feel if a country or few living with `ways that are different + don't agree, when yet because they have turmoil along with nuclear weapons, is exactly why we need a global clarity of what truly sustains us, + hold all accountable. Not just because they have nuclear weapons, but to stop them from being manufactured, so all understand **this is not Free Trade, rather it is eating at our natural resources rapidly + destroying what sustains us.** + we need to come together now + make changes within our understanding.

It is this what we can do with our tools now, to make space inwardly, + go figure whom best locally to guide us, to **rid our baggage, heal, so no more of this disassociated energy that we all create + can harness,** can stop eating at our organs. Interfering in our lung, kidney + heart function so we can have mental clarity to go figure;

+ if **no one locally then coordinate with your community to bring in some one from afar**. If i`m close you can gather a group + we can start this process to sort out what we can + make space for what will take a bit of time, as we sharpen our dulled sensors.

For **this is not just a community local issue**, rather cooperatively we have to seriously hold our global entities responsible to be effective or make new ones. + our tallies will show this story of these details. As now all become in motion as they gain understand of how we can remove this heavy burden from all these layers producing mixed signals, leaving scars within us + thru out our communities depleting our natural resources that we are dependent on.

So **Barack we need much more that you don`t talk about as with our interpersonal support to understand**. Yes you ask for better science + math to lead this path for better education. Which we think can help us better understand what is, what can be + how to do it within enhanced natural limits. Mitt you state our students + family need support not the teachers unions. Which we feel many will walk side by side as we develop together our communities + in this process self-develop. As far as the union I have to let those teachers that know their business speak for that. + we should give them support.

We can do all of this only if our schools/community change this process. So now one applies the studies as they engage + integrate together for the objective of aiding those in need of healing, getting clear, bringing self to the moment. To actual figure out what the reality status is of our local communities so as to better use/define gauges + that is not enough. Unless we focus direct in a priority, which efficiently can be done by starting with our local food/fish/medicine sovereignty. This then sets the path for communities needs to be met + how best to locally share it`s offerings.

Help me answer this question, please. **Do our brains require all this due to how we have created our neuro networks**, as we carried so much baggage. It is like a mouse maze that runs rapid, + if we don`t connect just right we increase the trails + become self-enslaved, chasing yet more desire, dulling our sensors, then

never feeling satisfied because it is not materialism that can change us, it is sharpening our sensors.

Only then can we attach words to our feelings that are real so as to edit + obtain harmony + adjust with early signs.

For those very ill it requires skilled assessment of what parts of our mindbody we have damaged in our misuse/abuse, so as to heal the whole body. Ask yourself or if ok, help another that is in need, if you even have taken a look or can feel the effects you have left on your self + others. Will they or can you get a grip on your own + gain insight to balance or do you/they just stop because we break?

Dr. Yun Wang has taught me how simple life can be + how hard we all make it. For the world offers a wealth of tools + we can grow by it as we do an exchange. So we all have local good gauges in place + indicators that each of us can respond to + correct with early signs. + for those damaged we can still make them more comfortable + not leave anyone left behind.

ok so now check into yourself daily + ask your self, `am I aware of all that I support with what I do daily, what effects am I leaving on myself + others, not to mention my natural world around me that effects us all?? + are you willing to work with your community to restore + allow that priority to help you rethink your path? see the difference in wanting a job + can` t finding one.

vs.

Too many jobs yet not clear of what really want, meanwhile you can get fueled to simply offer your hands to start. + cooperatively as you unfold, you may discover another part of you, in your community building. When this happens the interpersonal growth gives amazing clarity as we co_evolve in real time. All of a sudden you feel your need to do a job, no longer prioritizing money paid, rather cooperatively you all just want to see progress taking place. Now this part time effort supports you into a full time training as you may again give hands on freely;

What this does in this transition is help us rid our amps. So now our desires change, we stop wasting our energy. No more does materialism enslave us, rather we see away to responsibly make wrongs right/pay our dues + realize how much we allowed these delusions to steal from our moment.

These lessons you can't pay enough for. Especially when we get clear that these large energy farms are not the answer, we don't want to supply our excess waste, rather we want to understand our misuse/abuse + pull in the reins, recycle the existing parts than co_evolve as real issues are taken care of. As local communities **rethink + utilize your natural resources using alternative energy as a supplement** only to simple good living.. As natural resources locally depict what to be used locally 1st before anything goes abroad. + Once we go figure that + share what works locally + afar, no way will they still need it from us.

Sure those that gain from this market don't like to loose these investments, but this is why **you invite them into your local tapering transition, aiding them to rethink.** For when the world shows these examples of local sustainable living, all will catch on to redefining each's participation.

No way will we take part sharing our local resources with those with big footprints, meanwhile transferring energy afar in itself is a big footprint, when as locals come together + sustain locally, than we can reach out farther thru out our biome(s).

No longer will any local need the majority of goods from afar.

No longer afar folks will come in + interfere with locals ability to self-sustain.

So you see **how efficient we can become.**

So **where than will your energy go** some say?

Well if you take a look at the folks with hands on sustaining their local food sovereignty + equate what they do as it is trans-scribed in science terms, you see a flow of life co_evolving uninterrupted. They do it with a lot of shared live music

sharing along with some very tasty natural grown local food. As they **rehab very sensitively those in need. Celebrating sharing with those without**

Leaving no life left behind.

This takes everyone do_in their homework. As they hold self accountable + address/redirect baggage that continues to surface. For this earth has many scars + it will take awhile for us all to be free of them

Not to mention the **subject of discussion truly becomes creative as it fuels to want to do an exchange afar**, knowing when not to interfere in another`s ability to self-develop. Yet help define what`s missing, as than tallies are shared as good science is used in early signs.

These are the common sense tools that are integrated, not fragmented but followed thru until completed, leaving no feelings unaddressed.

Now serious ER disasters can be managed efficiently with out fear based misinformation;

As **community helps clarify** what many in office setting failed to pick up on, from medical doctors stopping their studies, failing to refer/patient unable to express/unaware both not knowing there is another `way, or how about the technical deviation judges allow from lawyers trying to manipulate when ethics should not be bought.

They **should follow the laws of the natural community.**

Which simple hands on with what sustains us in a balanced environment is our best medicine. When law is not enforced with making wrongs right in application vs. being bought, only than can all be held equally accountable, whether a legislator or a layman, inter-personally unprepared/over worked/not informed by locals, broken threads, etc. make a difference + as a **community**

support keeps everyone on toes as these tallies are transparent, helping people adjust with early signs easily within their own self-control.

Too many community members fragment in every field, simply not following thru as layers distract + interfere, many never experience the wild seasonal offerings thru out entire biome, nor getting to issues of how misusing/abused which produce these **layers which can be harnessed + energy recycled, back into self + local/afar community..**

Please realize **students/community focus directing together, can define the truth of wrong doing as all collect tallies**, giving real experiences as serious self-reflection takes place, fueling efficiency with creative solutions. As each real experience with their ideal of their future career continues to co_evolve early on, giving them clarity to choose their own path of continued education.

or

Perhaps realize it is within our self in need of this as each then co_evolve with it, then once **calm the resistance of previous desire**, no more interest + on to exploring a real career that heals/balance, + also gives **true self-satisfaction in the exchange of applying with local community as we simply prioritize function, energy efficiently + add creative expression.**

Too many people have terrible experiences + survive than to think this should be their calling, this is inefficient. Only once calm should you explore + be free to choose your life as you walk it into your opening. + All support this.

Now **this continuity transcribes the good science of natural living**, leaving no more science fragmented. Rather now it is carried as common sense daily as we integrate, apply + co_evolve with it.

Do you realize how many spend so much energy/resources as we carry dysfunction as normal yet it directs us wrongly, vs. us being **in control of our self actually choosing joy!** From the fuel we gain from cooperatively building/maintaining our natural community;

Customize your community restoration as members **create together, as you develop a curriculum** that is real for your local community;

Start by prioritizing function, energy efficiently with creating expression resulting.

No creative expression, than take a review something is missing, in order to be a working local sustainable community that builds self-empowered people that maintains local food sovereignty, for a start as a good gauge. For all to become a local, global + beyond participant. To do within your natural limitations, within yourself, your interrelations + your physical natural resources leaving no footprint on any life. Even your neighbor, because we cannot isolate our biological needs for life.

Many **good folks are trapped in layers of bureaucracy, while others are attempting to build assistance now + aid solution not for us, but with us as an equal.** No more deciding behind closed doors or after hours or by a few for the many. This is wrong..

President Barack Obama`s (hereafter in this document referred to as Barack) ideals for fellowship addresses some of this, as i subscribe from afar. Why did i subscribe?? Because i was not getting answers to what i felt was important for ecological assessments to go with the alternative energy developments he supported. i needed to study more + share ideals, as with Barry James`s experience from red Ivory trading in South Africa. His story is very nice + i suggest you all take a look at what can be, when you have a love for the wild to be left/restored to it`s natural state..

We offer to you to do the same, so **no more thought/resources are wasted or we become real with our own delusion,** developing our ideology of what is important/ discuss it with locals. + If unable to have it locally than pursue it afar with like minds or choice of ecosystem/subject to volunteer with/create

your profession where best have the opportunity, yet not fail to leave family left behind as all continue to communicate.

As **each do own homework**.. Holding government accountable now without losing focus with the waste of the campaign. + Try to prevent further waste by addressing issues directly, to define the origin of it`s roots..

Leaving no one left behind.

Students/community members can do this as they do a local walkabout, meeting all from local indigenous thru to legislator locally + afar.

Not just to resolve issues at hand, but to seriously resolve the many layers of deluded outdated policy/mindset that never stayed with the present. Leaving much dysfunction in our human interrelations;

Government, our local communities, not to mention ourselves, as many are in dysfunctional families where we have been left fragmented from intervention as **unskilled degrees lead many on**.. Making one feel there is a solution yet no sensitive tools to follow thru with the missing links to aid one to see clear.. As interpersonal baggage left in one, can easily flow into the issues left undetected, as yet another soaks it up. Leaving mixed signals.

Our natural potential that creates our cultural uniqueness is not being fulfilled.

We don`t want to waste resources responding to layers of data alone, as files are left with non-compliance, leaving people misuse/abuse. Leaving our self unable to creatively express, due to no prioritization of cooperative function understood, or no energy efficiency to reflect with. This is of the past. With this archive we can build now, we can show what many have been fortunate to have + still experiencing, whether indigenous or intuitive syncing with the natural world with sharp sensors. Either `way we want you to share + post..

We want to apply reflection + support for folks to get to bottom of these real issues that are presently leaving negative effects, so each add solution to rid + go figure as all take part in **bi`joy** experiences as each `boon with the natural world defining your joy..

We want to prioritize what is causing the misuse/abuse, to end it, so we focus on the efficiency required to build community self-reliance. + Share in **project osic** for people to restore their own sustainable working community. Not just to ride on a codependent wave of the product/service we never should have accepted to begin with, due to its negative effects left. Nor having to reinvent the wheel, once they can reflect with your offerings, triggering their thought, now to fine tune + bring home for their specific ecosystems limitations.

Do you see our point?

We don` t want to just know what is bad, + find a solution, we want to also stop that negative from existing in communities everywhere that created the original intent, + we can do that by posting as archive becomes a good tool to add to our cooperative community tool shed, that each can share in.

No one should have to go without in 1 community, when our human potential to communicate locally + afar is such a good tool, to share these experiences as we are fortunate for such good reflections from each. Sure people themselves may be fragmented + give to others goodness yet can't define for them self.

Barack Obama has created/restored various government functions to aid as tools, so it is good for students to share if applicable, in this process of restoring local communities as they give hands on. + If no good for real world than communicate it. So it does not become just another layer + can prioritize people to think of self without leaving a footprint. + Also a parallel eye to eye mode developed which students can be responsible for, as each experience our obligations to make this right or change, then to have those in continued studies fine tune them.

Create a tool or use the forum to trigger what can work for you to connect these fragments, as together students now fill in threads for harmony, as they network + resolve with local + afar communities. Leaving no void of waste. It is to be your objective to focus direct with the many patches` living in harmony with your like ecosystems/subject. As all simply live cooperatively developing your communities natural potential. + As your pockets` without become aware + reflect, those in need of support see yet another `way, + can define the missing detail to sustain themselves. Than all continue to focus direct as these transitions co_evolve all.

Enough scars have been on this planet from reruns.

It is **amazing how many live in misuse/abuse** yet never get to the reality of what is. **Ex:** This is material that each will have to define when each are ready to review. Thru out this material is reality of our neighbors locally + beyond experiences, that most hear about, or see in fiction with the drama of theater/tv or reality on internet. + A few real links of past + present negative happenings that may take some further research to get to the truth + more explanation needed for some. Which can easily happen to any of us, as many locals are yet to be aware it is already taking place within your local community, or threading it now or to happen in future, locally + afar.

1 below is a book of **Democide**, the other is the you tube video that you can find called **Unsurvivable**.

others further down thru out this material;

V.org with women raped + shot, the stories of child labor in the Congo, the other on **Shiva Vandanya`s Diary blog** with Indian farmers committing suicide, + stories where land/fresh water/sea is grabbed from local`s, leaving locals without struggling more. As well stories that work that many good folks have worked hard to report with very good science.

We share reality of our planetary + beyond happenings that we all need to take responsibility for as we continually check into our self, ask + observe the effects we leave on others. These reflections can trigger our local + afar thought. **You may think you can shelter your children, but if sharp sensors they are getting signals from afar in their neuro processing.** So it is better to inform so as each can then process efficiently vs. our present moment being interfered with, leaving many with mixed signals unable to sort it out.

Taking part with **project osic**, students with students + with community in classroom as well the entire biome `plan will give them fuel for their clarity.

This is **your choice of viewing these links + whom you share with.** Dealing with reality always makes it easier to get real with our self + rid our baggage as we share what works.

Why we share this is for all to seriously take the time to help us create this tool to heal the wounds deeply embedded still from this past + now experiences. Not just the actual drone or bomb effect, but the people afar that left their homeland if lucky enough to survive. + Are still feeling displaced or every night experiencing nightmares, contributing to their present illness, effecting all that are untreated/unsupported, which leaves an effect/over burden on those in attempt to help, etc..

We want to be aware of the affects we leave, for sharp sensors perceive these signals from others, as people are enslaved, within them self. When yet this has not been understood by all, but can be as we focus good research/stories + application of peoples understanding that have had 1st hand experience. + With good solutions over come, as we can harmonize.

We need to come together to sort this out, for we have many scars left as well present day perceptions of events still happening, yet many cannot process the mixed signals, yet our neuro processing with support allows us to harmonize.

Take a look at a few **Ex`s:**

Death by Government by R.J. Rummel

169,202,000 Murdered: Summary + Conclusions (20th Century Democide) + he continues to explain detail by whom, etc. read all;

www.hawaii.edu/powerkills/NOTE1.HTM

or how about this whiplash with a war mode economy, especially when it is business gains prioritized by many. how can we continue to allow this.

Quote; Paul Craig Roberts,

‘The few thousand Hizbollah fighters were able to defeat the Israeli army, which is equipped and supplied by US taxpayers` dollars while Americans are foreclosed out of their homes and left unemployed as Washington applauds the off shoring of their jobs, because Syria and Iran provide Hizbollah with financial support and weapons that destroy Israeli tanks.’

see whole article;

<http://restrictednews.com/2012/09/29/how-the-governments-lies-become-truth/>

a view of how Hizbollah started;

<http://www.csmonitor.com/World/Middle-East/2012/0719/Hezbollah-101-Who-is-the-militant-group-and-what-does-it-want/What-are-the-origins-of-Hezbollah>

Can you imagine the purity of our youth + their studies, that have no conception of realities, not to mention our many misunderstandings, as adults we carry. Yet perhaps have perceived signals/issues fragmented, not yet being aware from what, than to experience a war mode in real time locally or afar. + How these

layers build, as we try to sort thru what we see + hear in media. As many still have vivid memories that keep them awake.

We ask you to focus direct with us for your community, so together we continue forward with good sense, as we taper out of this..

We don't want the Jews side or those against, etc.

We want each to become sensitive to the life below your feet, working within nature's limits as we prioritize local sustainability as a guiding tool to start with local food sovereignty, with locals controlling + working the commons. + Investors supporting it as we all come into the local tapering transition + together rethink. Fueling us to rid this baggage, building alternatives, going forward so all can have a good night sleep.

This contributes to no more vets being displaced in mind + body after such experiences that they never where prepared for.

This contributes to no more each night, unable to have a good night sleep simply from nightmares or in pain injured, from living in these targeted areas. As well from living in the area that are building the weapons.

Now realizing we can work thru from both ends, 1 to stop the war while 2 healing as we restore harmony + explore.

Knowing **my own experience as a child + adult, i perceived from afar,** having no clue of why. Perhaps the many books i read of the concentration camps really left negative effects that i was too young or untrained to associate in a positive manor, if one can with this trauma.

Especially as my father as a child was beat with a belt from his teacher in the south + i would shy away as he would do the same with my siblings. So together it leaves mixed signals if unable to openly discuss each issue which we didn't, at the fault of me not knowing how to process all this, when they would offer their love + ask in support.

Yet i knew there was another `way + what i was experiencing was not the `way.

But i **had no clue what `way to go**, so i experimented trying to stay true to myself as i sorted stuff out, + this is early on, even at age of 8 when i was tied to the stake playing cowboys + Indian with my cousin, thinking i really got shot, when yet it was my period, yet never was prepared. Never doing a fiction mode, rather wanted to define the real `way.

As a young child this is not easy.

Yet no teacher, no social group, not even the many so called professionals dealing with the many family dysfunctions offer a `way. As they only hear words of being ok, + fail to see the early signs, that fragment when yet many teachers over worked, that many learn to see now.

Ex: we are an open book + it just takes observing + interacting + following thru when we see one have hives, or skipping school, wanting to leave home, always trying to be like another never happy with self, difficulty adjusting in school, these lists go on for many, yet a child is left alone trying to sort it out not having words to connect with what one feels, yet many parents don't have a clue, they are passing on the suppression/repression they picked up from their parents living it as normal, as they where not allowed to speak at the table, or ran from home early on then to find their own language from survival, etc.

Rather later on in life as i continued to attempt to help a few, nurses would read their doctors files stating non-compliant, + they did nothing. Or i discovered in archives, many good ideas left in file that never reached my eyes as family was left unable to balance issues positively on own. Rather **aggressive negative acts continued as a child + even as i type this or post comments, leaving me always thinking with each thought;**

ok is this what i`m perceiving or is this based on my collection of research. Meanwhile i then see my thoughts out their from another afterward. Making me think we have a global consciousness at work for those that can tune in, so how do i continue but to try to bring people together to go figure. Yet not interfere or duplicate, rather add to the bigger picture. So we each can contribute as we define the pieces to this puzzle of how to rid our issues as we are fueled by our understanding of existence.

So i`ve **decided to continue to share these ideas to trigger your thought, to invite you** + we will continue to work at the truth. Which i`m looking for a few neuro scientist`s along with a few to have a discussion. So if interested stay tune. Meanwhile **we offer our sensitivities, look for answers + share skills, as good folks reflect as they simply live a natural life, bringing us understanding of our interrelations to all life. As we bring them together sharing like ecosystem/subject as we welcome you to come build with us this archive.**

i`m thinking it will be **posted in the next` move do_in** subcatagorie in forum. As we **prioritize events taking place now, as with Syria, Iran + Israel** along with our idea to vote for truth, + what does that mean?? So i`m continuing to try to finish this before election. + for those spaces in turmoil we ask all to come together part time sharing thought to see how best we all can redirect to help them rethink, be safe, make peace, etc.

We are bringing up some of this on my face book/twitter at kara j lincoln, seeing the array of thought as the public joins in. Such as starting with this outsourcing of US votes, trying to get answers + understandings, many to decide if vote at all;

<http://restrictednews.com/2012/09/29/vote-counting-company-tied-to-romney/#comment-2350>

Realizing **today`s news/advertising with vivid film, leaves many with mixed signals** + truly unable to process such foolishness as people are perceiving also

real time reality locally + afar, yet unprepared/unemployed really not understanding what is happening.

Then to have those in government so preoccupied with juggling numbers, when yet they could use hands on from all to make government more simple. + Barack has offered **MyGov + more** (i explain more later) for people to share to do this. No one person can know every thing + sadly Barack has done a lot, that many are yet to be aware that he wants you to fill in what is good for you.

To see presidential + vice president debates should have more clarification with facts + students here could do this showing the math. **Government shouldn't be a job maker, people should make business as they first define their environment to work with in**, so we have lost our priority for life with simple respect, perspective, don't you think? Rather take a **look at how Iceland imprisoned their bankers for wrong doing**, gave funds back to people + all is progressing. We could do that to!

If i thought what we are trying to bring to the table, was about baking a cake, i would not interfere. **We have real solutions if students come aboard to help.** i can see why Vice President Joe Biden was upset, **these are real issues affecting many**, + is nothing to take lightly + to see so much controversy, it can get old. this is not a way when yet we could lay out examples as stories, especially with a the funds both parties are spending. Which we refuse to add anything to the kitty, for this could support education to lay out these proposals.

To see President Obama (+ i mean no disrespect as i have called him Barack) be calm, i thought was a good thing. When yet **Mitt appears to be to hyper + i can only think how wasteful his footprint has been with his development, as well now with Barack's green economy, where both need to explain some of this, yet it is not talked about**, so i keep reaching out to find a way.

Business from both can be appreciated, but **natural living defining what to do when, only becomes efficient when 1 is calm** + in harmony with the natural world. So all these investors that race as they technically juggle + multitask the

markets really have not got the sensitivity it takes to work + protect all life in the commons that all requires, as in balancing the genetic bio-diversity each community is dependent on, for all to link.

For **responsible positions with good virtual tools should not have errors**, + we should not have issues turning people into machines to try to maintain them. Nor should we have such high risk weaponry, when this continues to happen. Humans alone when not centered, have too much error, especially when it can be backed up as a combined educational program, such as what we are proposing here.

As in the CIA making mistakes on their call of protesters attacking the embassy vs. a terrorist act, when yet as we propose the community stories would know + bells + whistles would go off with early conflict. Or Joint Chief of Staffs alone defining without local communities what direction military should go in for over all tapering transition, which the tallies can be real support as tools. So **we are looking for more efficiency to end the high risk + see the early signs as people work together building their community + themselves.**

Not to mention **older folks that actually experienced these realities still suffer, leaving mixed signals.** When yet our human experience with Qi Gong + calming exercises can aid our self-repair. Along with focus directing as people self-express + reenact the issues at hand, defining another way. As we suggest the **priority performance do_in subcategory on forum.**

When many bring them together as in the hands on acting out of workshops, etc. Only then can they **realize how incomplete it was to carry this baggage for so long without skillfully seeking help to rid the distress**, that leaves serious issues to our organs, which can be done. As they would release + feel better giving them fuel to get involved sharing what happened, especially with those young that were being disrespectful of the happenings, truly not understanding.

Ex: Theater workshop in Palestine is leaving positive results **where young are telling grandpa, no i will not pick up that weapon, rather we have found another `way to express + talk to each other, as both sides have a discussion together, etc.**

Or those perceiving the manipulation even now + unwilling to work together, thinking there is no solution with this war mode economy, leaving them with so much hate. **We continue to share solution, then they calm** + redirect looking to resolve, which puts us all in a better state of mindbody harmony. Especially when we cooperatively share, allowing our energy to flow into constructive harmony as we build our lives, knowing there is a simple `way + when not happy, signs can be figured early on.

There is many solutions. We have experienced the international community wanting to live local + share what works. **In respect to all those that did not survive, we carry forward much goodness now** + can network it along with reflecting with many we are fortunate to have now with great sensitivities/skills to living simple with our natural world.

Peace is an option now for all if we refuse to settle for anything less.

We want Barack/Congress to see all the worn, torn threads from every one`s perspective, which is impossible to do from any healthy human being. So we have to show him, in his responsible position, as well others these tallies. + Inform him of his local responsibilities being same as all. vs. his or should i say the channels that have put him where he is?? Unaware pursuing other senses of priority with different perspectives very unfamiliar by many, due to the bubble government employees are in. Especially with this war mode economy out of control internationally. + US having more weaponry then all together, leaving many programmed as they are entrapped in it.

How sick is this to want to be the best or have the most??

This is not a healthy mindset + this kind of competition we do not support.

Together we can as local communities co_evolve to harmonize with the governments as people become the government, if entity is to continue to exist. But not by our self, as we must address the local dysfunctions in this `plan of restoration + share these tallies locally + beyond as we make wrongs right + **hold self + others accountable locally + beyond. Utilizing the local tapering transition to deprogram** as tallies show what is real + this is after homework networking;

As we unite + define, we can harness what has caused this. + **Only do for another when they are unable** + even then restore structure to rehabs short + long term to support one`s independence. So all then come to cloth/table as an equal, self-develop/heal + co_evolve our communities natural potential. + Let that be our ruling force. Then government roles once needed that went on to layers of issues, that replaced issues at hand as priorities got clouded, now can be simultaneously sorted out.

As we **welcome the legislators to come back into their local community walking side by side with students** + fulfill local obligation as everyone does.

Only this will show than clearly a natural understanding as more positions can be hired to fill in these out of time realities, bringing them to now as they are either incorporated, edited or deleted, etc.;

Please check in with yourself thru out the day + bring to the cloth/table what you cannot responsibly do on own + together rid unwanted ideas/positions, change policy so all clearly walk thru this evolving process together, with local students giving hands on to real people in need, presently fallen thru the social-governmental cracks as each responsibly adjust.

With the **support of very good minds that we now are fortunate to have** in young + old, as we welcome all to come together + focus direct. Supporting those that leave negative effects to rethink + become whole as those that perceive solutions share local realities + recycle what can, + new innovation is grounded within nature`s potential. Not one that has run from their body, lost in technology

that has no earthly or beyond application in real time, yet thinks a schematic will work. Don't just jump on another's wave, rather even here as we build this archive, let it trigger you to rethink, not just act, than to be redoing down the road.

No cold turkey, No excessive waste for some to gain on others negative effects, rather sharp minds come together in each local community + with hands on + set priorities for simple respect. This needs no further budget or researching funds, or files of what should be, as many people try to pass the buck. These are acts of responsible examples as one follows thru as they grip the moment, what ever each is doing + make it harmonize not just for themselves but for the community..

As we **network these tallies that are not reversing ASAP**, as with help as they go thru local tapering transition processes as we explain further below. Addressing us to come together when many without. Now each can then adjust not to just locals that are still misusing/abusing thinking they aren't. Rather others sustainable, cooperatively reflect with hands on/thru virtual tool, sharing tools that bring us up + beyond these behaviors that many take as normal. So we bring all tallies up together.

Then when running on own self-reliance, we ask all to **take responsibility to be part of this tapering transition** + support + focus direct students/community, be an in between with legislation + people stressed in between this dysfunction as threads are connected. So as to see how to assist needs to be met in the local community. Address what is being done to remove that which no longer is needed or resisting + assist these layers to dissolve;

Clearly knowing when to seek others afar for reflection vs, not giving your self ample calming energy to figure yourself or as a local community. Which we also suggest reviewing the forum starting from a beginning to end when 1st reviewing + take notes. But we have a **priority performance do_in subcategory** that suggests another way to go figure when unable locally. To gather folks + do a mime, motion performance in the wild.

So you know when to do this to celebrate being thankful as you share with your neighbors + **when with early signs to fuel another way** to resolve with early signs, when yet no words can be discovered.

Legislators need to know that they alone cannot make policy. Only our intervention will support them to end the worn torn threads, due to them knowing this foreign language best. So they can surface now also as a community member with simple life right respect with all. + support from community will help them catch up to rid the past baggage that keeps interfering in the moment.

Now **choose with all what is needed** + how best to recycle what in the platforms before just ridding them, as we understand underlying intent that created them. No more in same role for life time, accept defining for yourself + even then it is best to keep a mind like a young child + continue to explore life to truly co_evolve within each to experience their potential.

Rather all **do short interchangeable roles + yes be open to feedback** from all that responsibly walk side by side, as a local in your community. No more **Ex;** life time judges + lengthy term legislators, etc..

Let young + old intervene for optimum efficiency in interchangeable roles that bring issues to the moment + gather all for understanding.

No isolation from afar as our ecological territories do not allow that. So when we know what works in 1 area, it is wrong to not allow it to trigger also what works in another, as long as respect for life in like ecosystem/subject is prioritized;

Vs. as in generalizing that many have same issues + then pass judgment inefficiently, wasting resources of others. When yet the few in need can be given hands on from the students as a **learning tool** for all, even those legislative policies/positions now can become clear + efficient or rid.

i share with you a response to the invitation to the **IFHRA Domestic Violence Conference, 11.20. 2012 in WA**, that i shared with Barack Obama + few Oregon Legislators, holding their responsible positions accountable now in real time. (few changes made);

Hello,

please share or post if have means at conference:

will your conference have a teleconference online? posting board for sharing? ability to interact?? follow up, etc. from afar. this is the only way i can participate now. i have some work i`m trying to finish before elections, supporting Barack Obama + all parties to work together now + the future, leaving bipartisan falseness behind + come together as a human family, each as a local responsible participant.

thank you folks for allowing me to share, for if we cannot calmly set up measures in respect to all, we will continue to fragment bad science with yet good virtual tools that we know can work. Sure it is difficult to bring us eye to eye as we parallel with the internet, but if we don't fragments of layers continue to build + resist.

It is this disassociated energy that many can not process now or never, as many earthly scars have proven. We can harness now by coming together.

If i can clarify my understanding, please contact me as a you gather with a group so efficiently we can reach out together. + i also will call or chat or email thru teleconference. Unless local then i will meet eye to eye, presently in Charleston, Oregon + soon to be in Friday Harbor, WA.

i do have an interest to share + learn, for our **project osic** i`m presently editing, representing our combined` effect as we networked in exchanges in our explorations;

as well carry work from those fortunate to of shared in exchange that no longer are with us, along with many not so fortunate to have resources to communicate + those without virtual tools, that are dependent on others reaching to them.

i want to get this out before election + now share links with people to resolve for i believe there is a more efficient path now + that is to work with Barack Obama now in real time as he is getting much resistance around the board working with the many dysfunctions. For we all have much work to do carried beyond the elections..

i gave unedited version to Rio_20 earth summit 2012 for people to take the gist of it.

we can globalize thru local community networks, so we as the human species can understand how we work most efficiently for harmony. + with early signs support in a number of ways.

+ as i continue to try to define as in my community discussion last night;

it is these early signs that can give us tallies. + this project osic of ours will focus direct with communities, welcoming students to come out of school room + together we need this hands on support mechanism, as good minds work the tallies as adults + children walk + resolve together. After reflecting + defining local clarity to be applied.

as in we have an interest to stop all weapons, accept for personal hunt.

many people are very upset or not interested in participating with what they see as offerings now, or they say leave them self-destruct, those that repeat these social upheavals, meanwhile others know the US + others have interfered in attempts to help, supporting than not, etc. + many are really upset that each bomb to help them is so costly to US/others. which i find them to be fragmented them self, yet pieces of reality, trying to be clear as we all sort this out..

unaware of how with support they/them self could heal + be more calmly cooperating. vs say easy to do for another + fail to do for them self. meanwhile they are left with real negative issues without community support, from dental over do to real accidents detained in court unable to complete their medical needs, or work as others technically/legally deviate with unethical manipulations globally, not just locally.

we need to give compassionate support that follows up for each. not fragmented. + a sleep gas mode is as afar as i will go. to safely put people out of harm, to than follow thru with education/healing.

our neuro processing has not been understood + good research can aid this understanding of how many perceive from afar as well unable to sort out mixed signals once dull sensors in misuse/abuse. but we can learn this. + with good local rehabs with hands on, as students do this with community now, local curriculum's also will be co_evolved by their tallies + networked via like ecosystem/subject.

it is a human/life right for all to understand at a fair to no fee that we can gain discipline over our self-sensory observation vs. belief, as many have taken struggling behavior from our earthly scars as normal. yet we can resolve for inner peace. but it takes training for us all to do our homework.

+ tallies can show the worn torn threads of each as we support tapering transitions customized to each ecosystem subject as people learn to live local `boon with the natural world + self-develop as each satisfy without leaving a footprint.

it is due to no organization of our global human understanding of being a human family 1st, not to mention how as a living species we all are interdependent on our balanced wild that we can + must sensitively work in order for our co_evolving processes, not to mention link for the migration of all species to their simple living aiding our life. so all wild set aside property should have local indigenous skilled people guide locals to control their own commons, as they train to work them in respect for all life, isolating no ecosystem, isolating no ecological

category from our local living, as all gain wilderness experience to better be prepared for our natural earthly changes. vs exploit ER preparedness, etc.

by simply learning how to `boon with our entire biomes along with our neighbors, enjoy the foraging/hunt as we start with good gauges we have + we support links as in agro_ecology + ecological good science aiding this life sensitivity that we all require as we have our hands on daily with what sustains us setting this path.

Miguel is one that has fueled my clarity, he knows well the global food crises, etc;

http://ourenvironment.berkeley.edu/people_profiles/miguel-altieri

with this ecological understanding we also can build sensitive technological development but only when we have these MOU`s of ecological assessments in place for each local community. + taper out of these weaponry/military contracts that each state gets to build them.

we have links we suggested for solution to reflect with, as we state in project osic pdf being edited now. + i've sent them to Barack + few Oregon legislators. Showing these examples as in this;

http://institute.davinci.ac.za/brochure/Prospectus_2012.pdf

not to mention governments dysfunction in having representatives not responsibly be local community participants, interacting with these tallies as communities restore their natural potential.

which is a great answer for all life to be simply respected, realizing how we can gain this self-control + communicate calmly.

it is wrong to attack an ill person. we need to aid their healing.

+ even those people to have training to calm, to be aware of dull to sharp

sensors + their over powering mindbody effect. which many police now are not informed, as i have had this experience in past with my psych teacher in a mandatory training due to them being gun happy. for they had no inter personal awareness of their own inner tools + it takes this calm sustainable state to address ones balance. or when people over stimulate, not understanding, it is a hormonal process that they then are enslaved in, chemically out of balance, + it triggers extreme energy that they cannot control. Nor is it easy for those around them. For they cannot listen unless you tune into their suffering with real compassion in a way that calms them. Until certain other measures are followed up on with them..

same a fisher folk or a farmer as a politician + all fields should be trained sustainably as they give hands on building local community as we suggest in **project osic**. than preparing them for on their own to go out in the world + enjoy the exploration. connect with their pen pal etc.

these early signs can become made available to understand.

+ presently what i`ve experienced with western medicine in the US, is very fragmented, leaving ill people more ill, unless you have resources to continue on to correct it, etc. which actually if learn early signs, it is little to no cost to correct oneself. + even after when suffering to death, alternatives can make you more comfortable.

i posted on our forum article of such as we should not have to wait until our flesh breaks apart to die as i disagree with present intensive care practices + gauges.

so we feel we want to globally unite building ecological sustainable working communities where people live within natures enhanced limits locally + simply share as we link with many + build an archive.

tallies tell the story/aiding each to self-develop. + we have solutions from students giving hands on, as they inter personally unfold + gain education as they do prerequisites for their local community. as they maintain it's potential within their

energy limits as they co_evolve. so all work for each to become a local, global + beyond responsible participant;

to restore them self along with the rehabs needed to heal + for ER when it happens, which we all know it can happen to any of us.

to bring all to cloth/table to a `plan land/fresh water flow sea use review. + use good links to network for resolving the world economic crises with good science as we focus direct with each local community to integrate a tapering transition holding our self accountable, others locally + afar, + correct misunderstandings;

to view + understand how all can go beyond this falseness of no jobs, or need so much training when yet it is simple respect to support our self as we do an exchange with what interests as well what is in need along our path. those dull to reflect so all sharpen our senses. + as rehabs created we together address the restoration from all the earths scars, + end the war mode economy, yet become sensitive to work our wild, supporting local food sovereignty as a start for locals than to control as investment modes are made to support local infrastructures for locals to reach out, share facts in real time giving investors no reigns to invest in anything else. As they than rethink make wrongs right + come back as a local, global + beyond responsible participant.

we can't all know everything at once + it is more friendly to work together.

no more false green developments or world exports rather local self-reliance sharing what works. with good science engaging + integrating people feel the motion of life energy as they reflect simply, not only having to know computer.

now as local students responsibly advance they then continue education with their clarity thru out the world as all support each to explore aiding another as they build them self as they walk their path into their opening.

the world offers us a wealth of goodness + we can take these fragments of patches` of goodness + exchange with these pockets` without.

but it starts with communication + we have good tools so each is answered directly with what is pertinent to each of us. not many continue to try to reach out yet not get an answer + continue on as i have with Barack Obama.

this is why computer alone is not good, unless it build's a means to efficiently address what one is asking. eye to eye is good, but that can be contributing to the big footprint that causes these issues to begin with. + it can be simple to log + have people interchangeably log, so those of us that can't participate comfortably than we can follow up + read or talk to those if need.

as one share`s their truth. only than can others with sharp sensors detect how best to guide + together they focus direct. i can't tell you how many prerequisite college coarse`s address fragmented reality, same with military/police force training, etc. where interpersonal realities are not addressed. not to mention local application of hands on training. as project osic plans to trigger. with each understanding/co_evolution from the exchange. as all cooperatively enjoy their community responsibilities as they build for people to self-sustain.

not just locally but to adapt + respect life as we all work together for all to freely migrate. for their is no isolation of ecological categories. when we learn to be sensitively working all ecosystems,

then we learn our true human potential.

so i suggest initiating this from all of you as you go within + rid baggage that stands in your `way from responsibly joining in with your local community + help us build this archive of what works. not to mention my offerings to UN have never been answered. with all the resources out their we should not have to struggle so much + work so hard as we have to get this shared.

(even this email is time consuming due to technical errors, so i do apologize for so much misspelling/sentence incorrect structure etc. if it isn't my stupidity it is others. So i hope you get the gest of what i say here to trigger your responsible

acts. + down the road as we get more support we won't be so over worked. So even here i'm correcting now + have to email them back saying sorry for making it difficult to read. i really don't try to take up any ones energy. But we are all in this together + can make it more friendly.)

we just now became applicable to receive donations, so we hope to get more organized with others support to reach out farther.

not to mention merge with the many good folks now simply living to share these real experiences.

i feel we should not use weapons at all. only if needed, i suggest like a sleep gas to immobilize sharing to the world that their is another `way for all to heal. it is wrong to allow these people that are out of self-control to injure others, or get injured them self, which i've seen plenty, not to mention than be heavily drugged + released, as here locally 3 times stating no funding to keep them in, etc.

leaving fear + mixed signals in others locally + afar. than to see the war mode economy gain in the world markets is something that will be of the past, as we cooperatively all can make changes now + end this short sighted cycle that has left too many early scars on all life. simply because all of us have been too preoccupied lost in own layers to see our human realities, than to apply peacefully in an organized structure.

Any/many folks raging out of control, if we review their tally most likely will show misuse/abuse with many worn torn threads. no natural healthy life does this.

so we need to look at abusers as our children that need support.

the native American Indians would see these signs early on as they would than take a child under their wing, as well many good folks now can share these lessons, once structured. As in community understanding **project osic** from students creating an introduction in class.

not many got to the undeveloped child within adult bodies, rather as a child showing these early signs, they were put with adults that could guide their understanding of their misuse/abuse until they gained self-control + came back with bi`joy experiences as they took part cooperatively building community that harmonizes.

sadly many races of people have been wiped out or gained support wrongly to excel as they interfered in others ability to simply live. now we have the means to sort this out + stop it.

as i share every day trying to address responsibly it also takes me away from finishing our editing within our limitations. As in this pdf of **project osic**.

simply i need to go to work!

enjoy your meeting + i look forward to experiencing it from afar.

meanwhile please take a review of our forum link below which sets a footing for an archive to be built from all, as we share.

sincerely, kara j lincoln

Wow, i tried for 3rd time to edit + resend above email, all i can say is sorry when this happens. Libre`s open source document which i like does not fit into yahoo or Gaia's page format without changing the sentence structure + then there was an issue with the spell check, etc.. i can't tell you the technical software problems i have had to do what i do. So i have to relearn. i'm a function person + plan to have better means to not inconvenience any of you as we get more organized.

i know many of you can see behind this, as well many have screamed much sooner giving up, but i won`t.

Point is we can get clear..

i don't recommend everyone to do as i do, as i've been over working getting this finished + wanted to comment my feelings to Bill Clinton`s CGI 9.23-25.2012, which I did + then I followed thru to review their offerings;

i guess if UN was just starting, what they say would make sense, but they are years into this + these people are buddies, reaching out for serious help.

Ban Ki-moon wants solutions + admits so many offerings yet nothing is organized to work over all + wants sustainable means not just for profit thought. As well President of World Bank wants to be a bank of solutions now. But i had to share that they have to be accountable for how they produce this dysfunction + are part of the problem by giving loans to those abusing, not organizing, holding countries accountable.

The low + middle income/**the laborers connected to our elements have great exchanges to offer**, + should be with equal say as they come to the cloth/table for planning, as they talk directly to those than that can act on their decisions made. + This should be the building strategy of every community.

In the world supposedly 64% of them are ill in need of serious support with what could have been + still can be prevented if we stop the mental stimulus + balance hands on understanding. As people are supported by students until rehabs finished + even after, so as to continue this community classroom mode, not just to restore but to make it a part of maintaining community that harmonizes;

Where **every act can be explained in good science as it integrates everyone** to sustain themselves yet respect the dignity of all life as we are interdependent upon each specie to do it`s job. + Do_in community together supports the creativity for unique solutions. This reflection of energy fuels motion in all.

Not to make more off limits or parks just to play to give children means to more activity, rather wild should be sensitively worked as children have hands on from early on taking part of the restoration + planning. Producing seasonal foods as we forage, plant small fields + migrate is our most efficient way to prepare everyone for being comfortable in the wild as we boon with these offerings, supplying the activity we need as the human species is designed best for hunting + gathering.

So how did children get to computers, being inactive yet minds racing, being a big part in why we are over weight. People utilizing less space for physical activity seems strange. How did parents/community allow this to happen?

Understanding the natural world + our inner tools needs to become priority, as we house so many critters, critters to fuel our food, balance our soil, prevent our disease, keep us healthy, cleanse our air + fresh water, kill mosquito larvae when species planted in fresh ponds. Giving us many conservation services to work with, as the roots of indigenous thought are created upon..

We feel **project osic is a great solution** for all to incorporate all these ideas as they transcend into place or one sees what they do is not real + co_evolves. Without just jumping in + backtracking.

i can't stress enough as i hear folks suggest good ideas but i hear very little prioritizing our understanding of our responsibilities integrating with the natural world, which should be the fundamental scaling common denominator starting point.. Only this can then efficiently fuel each one. + To **prioritize our local food sovereignty** can then be a cloth/table platform to then define which solutions are appropriate when. vs. So much fragmented technology, as we here of this tech device to reach out to do this, vs. touching + sharing feelings eye to eye, as we work hands on with what sustains us..

As solutions at **Bill Clinton's CGI** conference i yet to review all but **i didn't hear about putting our hands in the dirt or a child playing in the mud** as they garden along side, the smell of the food being harvested or caught + being cooked, etc. but you have to give Bill credit after all his wrong doings as he still

comes back fighting for solutions. + If he listens to project osic + allows it to trigger his `way within nature`s enhanced limits, then we know he will help.

For **Free trade is not free it steals our local natural resources, globally** that all life is required to have if we are to sustain a healthy life living our human potential, giving us our ability to co_evolve as a species. Not to mention inner tools now to continue to explore + harmonize.

Verbiage + acts needs to be grounded with the earth below are feet in order for each to come from their center. Vs. many go to work leaving children to fend for themselves in a material world. For remember these children along with the undeveloped child in adult bodies are perceiving stories locally + afar. + It depends how they apply what they perceive + communicate it to all. As we need to sort out our ability to concentrate, follow thru + remain in control of our self in a harmony state. Not just exist, accepting what is.

So when each here are triggered to walk side by side each need to follow thru with their truth so families can co_evolve together. + Building community gives them a means to reflect + share with each other as they build a relationship of choice. As they put pieces together that where once with no association.

To aid ones ability as early signs are perceived to then share comparisons, reflect, supporting one to unfold. + Compare what can be easily addressed. vs. deciding factor when to bring it to the attention of an adult, sensitive + skilled, including teachers to follow thru with parents for solutions within the local community..

Can you imagine how children in war conflict areas are processing, as many psychiatrists stories have explained how difficult it has been. + As i told one the other day in a comment, it is getting just as bad to be at the other end of this trying to stop the weapons form even being produced, not to mention see them be targeted.

With present day lack of good transparency of when + what is happening, **we can't just look at our back yard**, we need to share local stories locally + afar + not leave controversy. As we follow thru when one assumes/gives false facts. + Share good stories of our human family locally + afar that are subjected to conflict as we try to stop it. Iran is a good **Ex**: how bad is this when people think they are building a nuclear weapon yet many say they are not, i add my comment after hearing Barack speak on 9.27.2012 at UN.

<http://www.iranfact.org/>

Every country should have the right to express to all globally as we change these gauges + address our early signs, which comes far before a red line they are talking about.

+ Media should hold self accountable + if not, by their boss to fact find, vs. the public having to call in to tell the station they where wrong...

It made me ill to see how Congress in July 2012 had such a difference as they voted for + against reducing specifics of US military budget. So i have no clue how military anywhere can be in real time with simple respect for life. When so much misinformation is given to the public everywhere.

Not to mention as many experience unethical judgment thru the US courts, as they appear to be stuck in what lawyers present + should go up + beyond it to stay ethical with subject at hand. + in many cases not even allow such technical deviation.

Which **project osic** we can have students focus on these tallies as together we hold people accountable + reflect with the systems that are dysfunctional.

Peace Action West (PAW) does good work giving this detail, check out their website + stay in the present with them;

www.peaceactionwest.org/

They are a membership organization **fostering broad-based civic activism to create a strong voice for *peaceful* and pragmatic solutions to global problems.**

With this kind of ideology left from congress as in over our present military spending, to debate alone, leaving many people unaware + uninvolved is inefficient.

We can now gain experience, + ASAP come together with our children/students + develop the undeveloped within all. As we together walk side by side + restore our local communities, sharing hands on for all to understand, as we each admit our truths + if any shortsighted, we than need to reflect locally + afar, so truth is understood..

As we focus on these issues together, only then will more understand how many now, do not understand the truth of what is really happening locally + beyond.

Remember we are writing this to reach locals, globally. We also try our best to plug in locally + we have been kept busy with important issues + feel **it takes a cooperative sense of coming together to share that makes a difference.**

People on their own can not + do not have energy or clarity to cooperatively focus on a community, such as whom is the pillars of your infrastructure for your community?? Whom is controlling what?? + How best can you bring all to this awareness of these folks so all on own page, especially when each are perceiving from many channels??

We think students can figure this out with teachers/administrators + community together.

Sure every community will be a bit different, but when you start focus directing into our real priorities hopefully it becomes clear as all gain understanding. For **when you work within nature`s enhancement abilities**, side by side with people

developing their student within, **it fuels us to follow it's path laid out** for us for each communities potential.

This is different then development as is, as each pull their own way or compete, than to have fragments of good sound sustainable practice.

We are talking about everyone do_in sustainable practice + 1st communicating it in a focused `plan. Not fragmenting local, state + federal, rather linking efficiently with all.

Their is no doing it for your child`s future unless we do it with them now.

This thought is real for how we efficiently process now.

Do you see how **this changes our perception of our roles, as we become present with our own reality** that contributes to our baggage, that they than carry forward?? Now it clearly becomes aware to rid it, as we give calm space for it to surface. Which now many have no calm space as they are preoccupied/carrying behaviors trying to survive, no calm space to free themselves of own misuse/abuse that many take as normal.

Now don`t just get motivated with thought of passing negativity to your young ones, for we don`t want that alone, rather we want you to do it for you. As you turn eye to eye in your walkabout with them + tell your child they must do it for them, + don`t tag on to you, vice versus.

Good **Ex:** When I write to **Congressman Peter De Fazio** about a negative issue, he comes back stating he agrees, + has been trying to do same yet others won`t agree, leaving him with a lot of unhappy people, that want it their way. This energy needs to shift for a humane `way of living simple with all taking hats off, to sort this out,. + we feel with all being on same page with our natural world via like ecosystems/subject as common denominators, project osic can trigger some solutions as we all come build this archive. For the people by the people as in **MyGov, one of the 6 month programs started in 8.2012**, i invite all to take part in.

Barack has started it for people to see availability as tools needed + rid waste + dysfunction;

www.whitehouse.gov/innovationfellows/mygov/

When legislators can't make a difference representing local community something is wrong + suggested to use these ideas starting with them also.

People coming together sharing these tallies/`ways from others afar can more efficiently make good decisions when in harmony. As all work together, **not waste energy getting upset** which leaves issues unresolved, rather trigger local thought to define the missing/worn/torn threads. Going beyond ER modes or even prevention + actually harmonize daily with our hands on what sustains us, not leaving it for another to do for us/but with us.

The only `way this can happen is if **you sort yourself out**, for our perceptions can not always process the way we choose if not disciplining a calm state with sharp sensors, maintaining your self-sensory observation vs. belief. So with early signs of discomfort define how best to work it;

Go within your self + see what it has triggered, bring it to calm so you are clear. Take a walk or a few nice deep breaths, inhale into belly at count of 4, hold 2 sec + release thru nose. Wait 1 sec + repeat 8 times. Reduce that cortisol hormone that results from stress + feel these early changes + stay in control of them.

So if upset go eye to eye + what have you organized with as a cooperative community participant. For **you don't have to carry this weight alone**, if people not open to discussion, rather share + discuss to define another `way to reach them..

This is why we suggest **a local tapering transition** so you gather + compare when no negative issue. Get to know your real local community needs + offerings as your `plan is set in motion. As tallies continue to give hands on support as we suggest here.

Now when you **welcome people that are leaving negative effects** as your perceptions are real + agitated, + hopefully before stress, gather + share the facts, giving them a change to understand, rethink, heal if need + make wrong right locally + afar.

This **transition for all is a win win situation** as all can calm as efficiency within natural limits are restored + understood.

No way can just a legislator enact for you or your local community needs if they themselves are not part of the local cooperative community. Nor can you or i be expected to know all their language + be on top of their schedule the way it is. Simplify + apply in real time as you find a `way to talk real issues as all walk side by side seeing same shades of color in each issues, as a local community participant.

But as in today becoming aware of a last minute vote for such a serious issue as expressing to our Senators that we will not support as red line for military action against Iran, **opposing S.J. RES 41 on (9.20.2012)**. To go to war, is like needing to go shopping, the way the process happens now days with no threading of life rights all down the chain of events. If store is closed you miss out that day, this is so dysfunctional. + These threads produced from these acts then going to war or the cost of these weapons + how they are paid from local people, need to be clarified + made transparent in real time, so people are not so numb with the idea that this is a paying job for many.

Rather we need to understand life that is being destroyed + stop it.

No i`m not interested in being bombarded with a military budget on a local message board. Rather **i want to see the tapering transition of each local company as people get clear with supplementing themselves with alternative sustainable local work** + say no more, as they choose to change + be active in local sustainable building of their community.. Not large manufacturing for afar, unless certain tools make sense to do in a few spots only.

Ex: people remaining ill are yet to be aware of like Qi Gong practices for century`s, along with other understandings to manage our self.

For **we are not interested in breaking unions or more folks becoming unemployed**, rather we want folks to understand the innovative conservation services as their community is respectfully fulfilling it`s potential. + Each of you inter personally thrive on your desires that fuels you to explore as your career blossoms, as you begin with volunteering as all shift, + you go deep within + experience as you take part in these interchangeable roles + explore.

So now people **see the conservation value of stopping each business that supports the war** as they become familiar with the story of our human family/the ecological effect, that there is no just local bombing, for all ecological categories are connected. + These weapons that people have daily hands on, contributed to the destruction of our ability to globally link our needs.

That effects all + students will show these threads to their community.

Come on people **how dull are you going to allow yourself to be?? Going to war is nothing to take lightly for any one.** So we say as long as all of this needs simplifying than **we are going right to the point of ending all weapons except for personal hunt** + what is that take to be fair 1 on 1 with a wild animal for your food/medicine/clothing or shelter, etc. + Do it with your community so it is a **managed hunt that makes sense sustainably for your community working the elements as well for the species** that also has it`s purpose in conservation services as all life does, including ours.

Do you see these positions needed?

These don`t require highly trained skills, they **require respect for life including compassion of how we cannot know everything**, but we can understand the importance of prioritizing our function energy efficiently now, leaving us in a much better shape to heal, do an exchange. As we then are fueled with creative expression, putting our heads together to resolve.

Ex: 9.29.2012 i share an email to OFA to Michelle Obama asking me to take part as their campaign promotional offering on the CA trail with Barack + Bill Clinton (i corrected some spelling in this copy);

Michelle,

for everyone to have the chance to move forward, this can all be done simple.

when i hold my ground + tell the guys i'm happy to call them at their convenience, with a little heads up do to weather, i feel it will center all to focus.

if you can't calm yourself + take the time to address what is on your mind + make a phone call, then perhaps the chatter shouldn't of been said to begin with.

i have a good footprint + i plan to finish my work here.

again i suggest telling the guys to invite all to merge, stop the bipartisan republicans + democrats, + get to business with each going direct back into their local community as a participant + work with the many solutions we have now if we walk side by side with our students + bring them into the community, along with so called professionals as they together take a look at the results left from their effects, as they see patients/clients on their own turf.

Michelle, please tell them;

friends i have thru out the world are simple peasants, fisher folks like in this community + others thru out the US, raising families, working hard with what sustains them, music filling the air.

then to have a business come in + take over, even Wal Mart could work a better deal, **stop it's footprint** which **i add here as i edit in bold**.

many walk in + buy their way, take over thinking they can do what they want, then to define the land is not suitable, then they deplete it or profit from it + take funds away, leaving locals without, as **natural resources are depleted, that they depend on. Not to mention us as we should be linking our wild biomes..**

some of these people are people that your people support in big development. + you want me to go on the trail with them. if i wouldn't be so busy i would love to,

because while they are saying their speal, i would be saying mine telling folks what i'm do_in _ how they need to take part now + help these guys define the good science not being integrated. for all locals should have the power to control their local commons as they fulfill their `plan, starting with simple local food sovereignty. vs. all this trade as in NAFTA + World Trade taking place going beyond nature`s limits or interfering in locals to sustain.

+ only should they welcome newcomers in + explain local needs + offerings, what is wrong, what can be fixed, what they can help with + together the locals maintain their community.

i've told Barack + Bill enough to make some changes, are they listening?? i don't get an answer to my questions, so i will continue to work on this project osic sharing links to the people for people to responsibly share this planet together + set transparencies as in what i suggested to MyGov.

i would like to see the detail of your peace negotiating history with Israel + Palestine + show you another `way, for anything that goes on this long is being fragmented without good science.

as i posted last few days out + about, what Michelle would your girls think, how sad would they be, when their friends are working thinking the Obama administration thinks they are not building nuclear weapons, then to hear their parents or even some of the news of Barack talking of this red line, when no sensitivity is discussed of the ongoing disassociated energy with attacks verbally + what that does to a child, not to mention an undeveloped child within an adult body as we their are many.

have you not seen the psychiatric medical reports of these people/children in fear, etc. all these years.

they deserve the peace of mind as many in patches` on this planet have + if anyone can do this Barack + Bill can, but not if they are fragmented like Bill or led by lack of transparency as with Barack. so either you know something we don't + hiding it from us, or your allowing this disassociated energy that Netayanyu has dulled his sensors with, + i have compassion for all, but i refuse to allow a dull sensor person leave these kinds of negative effects on our children locally as we hear this as well those afar.

i don't know Michelle about your family for i respect you to care for it + i know how i've worked with my lil 2 yr old grandson as we deal with these issues that daily we hear of. + how can these people that are so dull be allowed without the proper support to sharpen their sensors, giving them fuel to gather sharp minds + lay out the local facts in real time + responsibly acknowledge + bring it to calm asap, + on to the next issue. like an ER doctor knee deep in alligators in the ward, which my friend has been.

no one should be making decisions for an able person or generalizing. not at this high stake with weaponry of mass destruction, even anything beyond personal hunt, that should not exist anywhere on this planet for police them self + military are inter-personally not trained to be human within our potential so they can become a local where they place their feet + be responsible to hold their ground.

i need to go to work + i share my work with many.

Michelle until we meet, i do hope you talk to these guys + tell them we are yet to be on the same side. + until i can show them a business that Bill Gates or Al Gore has supported yet La Via Campesina whom represents many thru out the world can show where the abuse was taken, not to mention right here in my back yard with the natural gas intended to export or the fracking that leaves toxic effects, or the monocultures + GMOs. for i know of these farmers in India that committed suicide trapped with MONSANTO. can't you see how French, Russia stopped using their product + Germany now considering to stop these ill practices that should be everywhere. vs letting finances dictate the world market.

sorry i refuse to allow this to continue when yet we have simple solutions to turn the market with modes of good investment after we market our project showing ways that people can

come into local tapering transitions + invest once facts are transparent + people locally in charge of restoring communities of great joy as they all get fueled working within nature`s limits.

i can't tell you how i've repeated this + it works + it can go far more than giving people jobs, it can restore healing energy for people to rid their baggage, harness the disassociated energy as they are fed with good local natural food, good

thought of what sustains us, conservation services offering many tools that many not even aware of, so now this hands on exchange goes viral.

forget your lady with her 15,00, if i told you all we sacrificed, not to mention those that couldn't make it, you would see your emotions are in need of sharpening. + that is what happened in the material world people get trapped in.

so is this what you want Michelle, for me to walk with Barack + Bill + tell this? i don't hear this kind of verbiage, + i know if Barack gets my sent of what this really can do, you folks would stop this foolishness of wanting funding + you would do business + hold your ground.

for i refuse to also deal with more military illusion thinking that is strength as with Mitt`s delusional state, just take a look at his footprint + use transparency + students can help on the trail.

now if you want to get serious + bring me to the table for Iran + Israel/Syria, etc. to see some real transparency, then you can count me in part time for that is the work that is very high risk right now as many are being killed, meanwhile many are gaining, we have watched the technical trading + it is sick how it continues. + you people are in this responsible position so i hold you all accountable to make these changes.

but i prioritize my attention, my energy + i ask please you do the same.

thank you for rethinking.

peace is every ones option once you open the transparency to every local community globally + let those with sharp sensors collaborate. no more localized groupy leaving the energy pass from 1 to the other, open it to the world. for we have no isolated category`s + we as the human species are interdependent on our wild biomes for all life, including ours to migrate.

this is the only way to stop disease, disassociated energy + vaccination as Bill Gates states as a good investment is a sad way to promote our restoration `plan as we can build ecological sustainable working communities;

i love Barry James story, with his Red Ivory Trading in S Africa, as he loved the trees more than the wild life in S. Africa + works to save real conservation services

as he works them, which you could do Barack with sensitive people to guide as i repeat with Miguel Altieri from Berkely with his agro-ecology.

then Barry went on to ecological management, when even right here in Charleston, Oregon where the sea lions could be a managed hunt, vs. the emotional environmental fragmented science, allows them to be a high risk as they injure people when they interfere in them working the elements or can even as they walk the docks. which has been such a treat for people to crab + buy their fish of the boats.

we have such goodness + we could have much more if you use good science + stop fragmenting good + bad.

yet you people allow this fragmented science to stay in place. i write but get no responses to your different entity`s in charge when i offer solutions.

check out Barry`s ideas from his school;

<http://www.davinci.ac.za/education/education-about-us/the-seven-davincian-principles/#>

http://www.brousse-james.co.za/index.php?option=com_content&view=article&id=121&Itemid=72

http://institute.davinci.ac.za/brochure/Prospectus_2012.p

with good virtual tools in place, teleconferencing + transparency, putting priorities in place, we can resolve, leaving no life behind.

good day

love, kara

end..

begin..

This gives all people a chance to become a local, global + beyond community participant as all further their self-development with students exchange;

Furthering local reality + do it as your work into your creative expression, prioritizing function, energy efficiently. Which than **fuels one to be self-satisfied as harmony spreads, in self-reliance, due to calming self to choose.** vs. Be enslaved with a career created from misuse/abuse, just because you survived it. Rather go on + explore + sure you can use it part time to aid you, but not dictate your path into your opening, rather you choose your ability freely, as you put in your homework + walk it.

It is **best when all participate in the building/maintaining of good rehabs in place**, sharing your particulars, for we all know this is human reality to easily be in need. You **don`t have to be together all at the same time**, but **you can each take turns logging** who was their + brief over view so others can conveniently check in + update appropriately when can.

So **people can all be on same page.** For at any time an accident can happen to any of us. This has yet to be prioritized, + that is why we have a great separation between community + government. **Leaving many left behind..**

Not to mention leaving our self behind. How many of you are over pressured feeling something, not clear, maybe those mountains/deserts or oceans many have fortunately grew up with as homeland, not to mention those that go for spiritual retreats. Knowing well what you are experiencing daily as you go to work is missing this.

As **many of you indirectly are contributing to the depletion of our earth** which many seek retreat in, this totally can leave your neuro processing in a hypocritical state for our hidden brain knows well as it perceives far away. Any of you that have studied photo reading know well. Not speed reading but photo reading as each day we perceive much more to process than ever imagined.

Now imagine, actually just many of you can go around the corner + see the signs of those their now **as in the monocultures of the Midwest that left/leaving dead zones in the gulf of Mexico.** As now they are clear they where misrepresented +

over bought Nitrozen as 1 example. + The large energy developments as they are laid in your path as we here stories, it is only a mile difference you can go around, etc. etc.

Not realizing people are all ready over regulated at high safety risk, working with the elements, making their daily/seasonal jobs harder. + **Why is it that when people do this for several years as they contributed to their local community, especially under harsh working conditions, that they than should be now interfered with??.**

Some say for the better of all, not true;

If any of you participated in the **marine reserve dialects + saw fragmented science, or speak to health professionals that treated those illness as in mountain top mining** or the many exporting local natural resources, you would better be prepared to intervene.

We can harness this industrialized programming as we parallel with simple natural living but not for long. The trajectory will change our course soon on, as we easily than feel from our comparison of natural living to what is exceeding nature`s limits. As we **bring to our local tapering transition, tallies of understanding + recycle** what we can, as we all collectively add our input locally + afar if getting mixed signals + welcome those leaving negative effects to the cloth/table + share these tallies for a win win situation so community works together..

Until we do this, we truly have no democracy.

Or do we actually have to make a peoples deal? What, you may say?? the judges make deals.. the Congress + Senate make deals.. world governments make deals.. now the thought of us having to make a deal as people, that simply want to live supporting our local communities without such footprints;

Michelle Obama, you spend more on your choices that people are having to support, yet many are without, as the Obama administration is being accused of a lot of spending last year, for your personal accounting, can you explain yourselves?? I thought you folks paid for your own personal consumption, do you?

Barack can you explain why people feel Israel is got control of this election + the idea of Iran being accused of a nuclear weapon in the works before elections is a ploy, a deviation for a few things supposedly that people are not understanding;

As in for some to gain on weapon sales as US gives them to Israel + Syria. Yet many ask is Israel just trying to get water from Iran. **Which many say is real issue, many are confused?** vs. Iran not having nuclear weapons. As VP Joe Biden says in debate. Which would be nice to respect these people, vs. carrying negative thought as in the 15 years of peace talks from Israel + now Romney/Ryan ticket. vs. thinking Intelligence may make a mistake, when yet student`s + communities networking can clarify + stay current in a positive potential. Can you explain this story in detail that deserves clarity?

Not to mention other countries that are being supported on both sides as people gain from the sales of weapons.

Ok + how about NAFTA + the world trade agreements not complying to ecological standards as in the heavy footprint they leave, shipping goods back + forth to process. Or not working within nature`s limits when developing. Not to mention not holding locals accountable afar when they go in + develop destroying natural resources, grabbing land/fresh water + sea, leaving the locals that never have been use to land rights documented, yet can organize + prove how long they have worked the local grounds + make corrections. + Even if already organized many are being abused, as developers deplete the resources + how they process them leaving huge negative effects.

Not to mention the pharmaceutical companies as many doctors are over using, misdiagnosing + not managing patients to heal themselves or sharing alternatives

as in Traditional Chinese Medicine, as locals can grow herb/food local natural gardens to manage their own health as all understand what we are talking about here.

That we need to **link our wild biomes not just locally** reestablish our wild balance of genetic bio-diversity, but how all life including ours is dependent on globally migrating.

But we in **project osic have reflection with simple good folks globally to trigger clarity**, as we welcome all of you to fill the gaps for your local community to restore within it`s natural enhanced potential with good gauges + you help us resolve all of this in doubt globally. As we bring all to the table in a tapering transition locally + globally + open the transparencies so sharp minds can prioritize + guide.

Where you clearly speak what deals are irresponsibly being done that you see if different locally + afar to help us prioritize this order of sharing our cooperative focus as a human family sharing this earth + beyond as we all go to work self-developing into each being supported to build their path as they walk it into their opening.

+ Respectfully find good science verbiage that can be a common sense we can share that is clear for all to understand;

So each maintain own discipline over self-sensory observation vs. their belief. So we can go beyond with good professional modes of people making no more deals no where, rather ecological natural enhanced limits are guiding awareness. + Curriculum co_evolves for each ecosystem/biome as you restore it with your local community. + Come share as your representative from your interchangeable role, posts, as together we build our archive. As well you use our forum until you define differently.

We are fortunate to have great potential now due to these people being fueled from how they simply live to share what works with those in need as they do have a reality of our global food problem.

Good **Ex:** we refer often to **Professor Miguel Altier`s agro-ecology** curriculum created with indigenous `ways that work thru out the world, that he works with, that can set local gauges.

As well these folks **that help us remember so much detail as we welcome more links;**

<https://secure3.convio.net/fww/site/Advocacypagename=homepage&page=UserAction&id=233>

see this **Ex: which the average person cannot stay on top of all this that is passed** + we should have a direction + then responsible interchangeable roles acting when locals themselves cannot resolve.

Please co-sponsor H.R. 4025 and H.R. 4024

Dear [Decision Maker],

I am writing to request that you co-sponsor Congressman Edward Markey's Keep American Natural Gas Here Act (H.R. 4025) and North America Natural Gas Security and Consumer Protection Act (H.R. 4024).

i share with you how we work this project osic as i edit it to reach out, + ask you to please do the same. + You can also support even if as a local community you gather + write letters together + all sign, bringing students/teachers into the process for their fact finding tallies, for this can change if you representatives come back to take responsible part as you walk side by side with your local community, understanding how so much is fragmented in wasteful layers, leaving folks left behind.

Which we welcome you to welcome your students to come out of school room + into + with your community to give this hands on, while rehabs + community is

restored within its enhanced natural limitations. Giving people understanding of stories happening that they never imagined, giving all tools to resolve. So as to stop all this attention required + prioritize some ethics to be understood vs. fragmented confrontation of **Congress/Senate pulling their ways, when yet nature should rule** + a common sense good science to lay out the path, not controversy or deals.

Ex: Drilling and fracking for oil and natural gas threatens the water we drink, the air we breathe and the communities we love; we should not risk **any one's** public health and environment to sell energy like this period.. let alone have to be on top of what is being voted on from legislators.

We have means to ecologically stay healthy + work building our conservation services as we gain sensitivity from the many indigenous that can help us understand how to work our wild lands so as a human species we co_evolve as we globally then link our balanced local biomes with genetic biodiversity that we need to survive, keep us healthy, help us grow our small farmed foods.

which many now have dulled their sensors supporting or just due to not acting, allowed those dull to create layers vs. **work with good skilled sensitive folks as with Prof Miguel Altieri from Berkeley, Ca that shows in his research that we can have same yields without toxic ill effects** as we have solutions for our present global food problem we have, which these methods interfere in.

not to mention the many around the world having land/fresh water/sea grabbed + or depleted, leaving locals without as these large developments continue + no one is holding locals accountable locally + afar, which we ask to add to this bill..

the **oil and gas industry wants to export fracked natural gas overseas through liquified natural gas terminals planned across the country.** the industry is already in the process of building expensive infrastructure to transport the gas to these

facilities.

not to mention **no sound plan for restoration of our land/fresh water flow to sea use review**, which i + suggest you also, offer suggestions to Barack Obama in the MyGov + to UN, in attempt to define how best to work with governments. so as we can regain an efficiency ridding this fragmented bad science. where developers exploit natural resources, not working within their enhanced limits. nor using alternative energy as a supplement only. when these large energy farms are interfering in our ability to restore our local genetic bio-diversity + link their path globally. to sustain what humans are interdependent on.

not to mention have **locals manage your own communities after going thru a `plan land/fresh water flow to sea review giving all peace of mind being in their wild**, vs. FEMA`s idea alone for ER preparedness of our earthly changes. which does not prepare people with wilderness awareness.

exporting natural gas overseas will cause gas prices to go up after we have built all the infrastructure needed to export gas and we are dependent on more and more fracking. this is **bad for consumers and threatens our communities and the environment. not to mention our health.**

every time we have to remind you of this, it makes me aware of how dysfunctional our position is.

where are the government gauges to work within nature`s limits, where are yours as a local cooperative for your community, such as agro_ecology, working for local food sovereignty, for locals to protect the commons.

we can have students collect these tallies to welcome investors leaving negative effects into a tapering transition, where together we heal, make wrongs right + support all to become a local, global + beyond participant. always having a mode of investment on the table ready to invest in now supporting locals to self-sustain as they work within nature`s limits.

please let **project osic** trigger thoughts in each of us as we welcome all to build this archive showing the process of building ecological sustainable working communities where we harmonize;

engaging + integrating good science as our daily common sense + stop the fragmented science from happening.

thank you **Food + Water Watch** for bringing this detail to our attention. + i'm sorry your representatives that get over paid are putting us all to work like this. which your tallies will show this detail of waste so as to define `ways to resolve.

thank you folks + i realize with the many layers, we are all in this together + sadly more dulled due to numbers out voting what is simple + sustainable, to flow as all life in harmony does. Which can fuel, if we redirect + sharpen our dull sensors. as we work now supporting those that work our elements to come to the table, where good science is then enforced;

Prof Miguel has had the experiences where over 200 tests where over ruled due to another thinking their values could feed the world. this proves we have a lot of work to do + we hold you accountable as well ourselves to no longer allow any development without it working within natures enhanced limits.

again i offer **project osic** which i`m presently editing for those that have more resources then our new non-profit, for us to reach out, as we share what works to all.

living locally responsible is the solution to world peace as all share what works for all to sustain.

good day..

end..

begin..

how about making a deal, i share thoughts for election debate
10.3.2012..

<http://i-come-to-talk-story.3220728.n2.nabble.com/we-have-solutions-please-take-a-review-of-what-i-sent-out-yesterday-corrected-today-to-trigger-your--td7559334.html>

end..

begin..

This network truly appreciates the many good stewards we still have on this earth to reflect with. **We are about serious change locally + afar**, so as to **end** the war mode economy, + bring local responsibility into the local community. No longer needing/accepting a military to do our personal responsibilities, as they taper off, as well legislators that are not actively a local community participant, yet want to represent us.

We feel many are not open, or their sensors are unaware + need stimulus right in their face, perhaps not realizing how dull they are. As they prevent truth from being shared so we can work at the facts. Which we support you here in **project osic to help people understand to calm, so as to sharpen their sensors + realize when stories are incomplete.**

So we must continue, as uncomfortable as it can be, when we see untrue facts we need to as a community have a representative in interchangeable roles, then set one straight. + if it continues from same source then welcome them into your local tapering transition, as each that perceive positive solution, then help them to rethink.

So no more thought of sales as it stimulates those that are dull to react, vs. responsibly seek solutions to share.

Ex: So than what is military as is, needed for?? Accept to fill positions from locals as they feel war feeds them to keep a job. When we know

we have plenty of good positions if we rethink all this + work within our natural enhanced limits.

i`m not saying they are not needed to remove the layers of their position in government they helped produce by participating. But they **need to become a real local participant locally where ever they plant their feet. This is the missing equation in US military + many. for their own sense of self, to become whole,** they need to be free to make human judgment that is sustainable, as they take part in new local communities;

Sharing what we know now as in our archive as we link with many globally in these experiences. So we get 1st hand story that is complete with good science that we know with sharing our forum, that it is simple natural living daily with common sense, as we share this human common denominator.

Understanding how we gain fuel from working within nature`s enhanced limits. In order to even fit in to a natural cooperative community. that fuels them to make good judgments in what ever they do..

Not live as in boot camp as they totally loose their sense of self + why so much screaming??? Why so much programming??? Than to have others unaware, not on location dictating as we have many lessons of loss from this in past experiences from incorrect judgment in real time.

With **project osic** as a tool, **each community has a spokesperson that is best if an interchangeable role.** Keep life simple. As energy is not wasted + people can work at this disassociated energy + recycle for themselves vs. be over loaded interfering in others ability to take their own responsibility. Each community will build more cooperative tool sheds as they unite with the local recycling places already do_in good work, yet over loaded. Take a look at your local **Food Pantry`s,** + non-profit businesses, **etc.**

The **ability to volunteer + work community efficiency. vs. starting another entity competing** to your next door neighbor perhaps already struggling,

then to find out shortly after all the work you put in, you end up closing, due to no business..

Folks **this is a hard way to learn when yet we have a ` way do_in that works**, please take a review with our forum, sure it is a lot of yada, lot of typo errors, but we address serious issues fro you as a community to come post + together as a person we sort this out.

Giving all a clear reality of this dual process taking place, so as to synch these happenings + **be clear to recycle what many never expected** + even buy at prices now being able to afford to stay within your budget.

Students/student within all yet to develop are great to aid this process. Not just to continue pulling in the threads, rather to stop those/policy that are resisting, in themselves + those deviating/manipulating for their own gain or perhaps sincerity but sensors have dulled/ simply unaware. As natural innovation inspires creativity leaving you in motion to explore.

Actually i`ve asked **`The Hidden Brain, author Shankar Vedantam**

www.hiddenbrain.org/

To consider aiding us in some understandings, which actually his book can do, so check it out.

Those of us still working on our baggage, can in micro seconds start repairing our dull sensors to reflect. Taken responsibility + choose to step down + be supported to rethink as we reflect, each supporting/building a local tapering transition. + Regain our sharp sensors.

Define where best to find your place in your local community to harmonize as you start freely reaching out giving hands on, understanding your ecological responsibility that fuels you, helping you walk your path. Meanwhile **sharp minds will excel at organizing, with this part time help, of you following thru**, which

fuels a representative for your community to post with us all + focus direct, sharing our wrongs/rights. Co_evolving. Linking with movements as each fall into place vs. repeat misuse/abuse.

Please let young + old sharp minds intervene + help us resolve peace now, while others are healing.

Leaving those dull in place, is the old school of thought when people where preoccupied struggling for survival due to wars, doing for the whole, many times failing to do for self, not even aware of do_in consciously in the moment, etc.. Which many on the globe are still doing, but in US + else where **we are fortunate to not have the drones yet/bombs go off/civil wars, etc.. + We should stop them from being built everywhere.**

Ex: It was amazing to hear on NPR from a community supposedly spokesperson in Texas to state they will go against the UN, **if Barack wins, due to them disagreeing + the local authority was supporting them + felt Barack would call in the UN guards to stop them.** So stay tuned, it is ideas like this that started Rwandan war which is total lack of self-control to allow anyone to influence you to be disrespectful on any life. Same with Libya embassy being attacked.

It is these times that **we can organize for simplicity as we get fueled in understanding** as we work with real natural gauges in place to aid our self-development of sensitivities required to stop misuse/abuse.

Only when we **`boon with the natural world,** this will happen. This is why we ask for your ecological review, to work your wild, not just leave it sit off limits. For the sensitivity of developing it for our local food sovereignty has rigid guidelines that produce conservation services to aid as tools locally + beyond.

If we have a good sense of our self, we do not allow our self to ride on any ones wave, including ours here. + This at times is hard to define, this line requires us to maintain our sharp sensors to detect when old baggage is still buried deep within. + Many people on this planet was part of these earthly scars still triggering

aggressive acts. As undeveloped children + those in adult bodies, with no upbringing with good social political support as many communities have, are being left behind + these people easily get swayed as they ride on others wave.

Another **Ex: is the US shootings in our schools.**

Have you taken a review of the parents/social support systems or lack of support for mindsets for these children, then to see the child`s surroundings of how well their associations are perceived with our unconscious mind, as **Shankar calls it being on autopilot.** Which can be good if we want it, but what if we don`t. Yet our minds perceive all that happens around us more then just what is being told to us.

i know from my personal experiences of networking, sharing exchanges that many communities do not have ecological understandings of what should be our prioritized cooperative effort for our communities to sustain our ability to self-develop.

it`s easy for a parent to tell a child what to do, but to help a child make good choices to self-develop + communicate *all that they feel, is not happening.* Leaving many with mixed signals yet leaving many on their own to fend + they are doing a very good job, + now we need to take this energy + aid them to do_in within some context of inter-personal awareness along with their ability to reflect with all locally + see the truth within all, so as for each to make our own decisions, not because we tell each other what to do. But **we feel a different energy when people reflect that really have some good `ways about them.**

This doesn`t take understanding of brain surgery to know what we say is not it, vs. how we say it + the tone we give that is perceived more so. + How many times do you **check in with yourself + catch up with you,** let alone with a loved one/child or neighbor/not to mention as a community??

It works + it is worth getting to this understanding that you can empty out baggage, + still make space for **do_in** your homework, **not doing** more living with bad choices to produce more baggage. But you have to get real with yourself + work that which surfaces. **Try to go with those that took part + eye to eye get clear** or give them a call + follow thru. If not fortunate to have them yet, call a friend + steal deal with it, for our mindbody gives us this ability to let it go if we work it as if it just happened.

Our inner tools are really helpful once we learn how to use them.

It is **more efficient when we address our early signs + not just act yet**, rather tell yourself there is more baggage perhaps to unload, especially when new to this idea. + Make no long term commitments accept to yourself to get clear + empty out. Than when this happens you will feel your center + know that this is you + as you build you have a good foundation that you can rely on as you become more in tune with your gentle bells + whistles + work it, vs. ignoring until we become so dull we have to be hit over our heads with a hammer.

It is **amazing when we can address our issues early on**, redirect them + stay within our limits + go figure as we calmly progress. vs. 5 steps forward + 3 back.

Then less baggage surfaces + you become sensitive to these early signs as you no longer let them steal from your present ability to stay with the moment. Drawing in that good energy from past that over worked your organs along with those future thoughts that just interfered, rather

Now what we once thought was real makes us ask more questions, gather other opinions from real folks that you can feel the energy from, young + old, locally + afar in our established networking, where we share real family issues, respecting all life.

So when we see or our children as in today`s (9.19.2012) news, we can openly have some tallies that make sense in a discussion, vs. now as many have no clue;

Who is Sabotaging Iran`s Nukes?

<http://news.yahoo.com/sabotaging-iran-nukes-084500157--politics.html>

Please check out their updates locally + share the threads + offer input with early signs so we can change this mode of a few voting on misinformation or too late to communicate to stop the disassociated energy from voting wrongly;

<http://www.iranfact.org/>

+ **next time a vote comes up like this** you can then be updated + question it as you take part. This is what virtual tools are unique for, but sadly how many of you or your friends don't have access this way + the medium used to stay updated. This to me has been a lot of information. + To see us not be informed or me, maybe more of you are informed than i think. But i seek understanding from many + they have no clue + then Senate acts on it with out us participating should not happen. Tallies will show the truth.

No more isolation of any ecological categories for we all are interdependent on our ability for all life to migrate. It is only in these cognitive delusions that we can clarify.

We welcome you to come post anything that you feel can simplify helping all become aware. Please look at the next move`do_in subcategory on forum, + once we get a bit more organized we will pursue that mode. So if any of you are ready to post in that subject i will get your comment + perhaps you can start a ball rolling.

We don`t want you to stay in this computer/paper mode if we end up publishing, which it is hard for me to cut any tree let alone make a paper book.

The point we want from all this is to have us all be working this information into real live good science as we engage daily resulting in art forms that are a `way of

living, as facts fuel. Not the waste of art that has no application for self unfolding or community function.

Real energy feels good, as we make changes + live with the art in every material object we surround our self with, it is a joy to have natural elements around us + not have to create an art from as in such wasteful products destructing the elements as people exploit them. Create with them. with the fuel the natural world gives us as we stay within it's enhanced limits.

Where many young + old are stuck with mixed signals + it is this confusing that cannot sometimes perceive reality, nor control oneself when subjected to more anxiety. So we feel by engaging together as we share + build an archive to network with globally via our like ecosystems/subjects, **real friendship is made** for our ability to all continue our explorations, **sharing a common denominator as we co_evolve this understanding.**

We want to see schedules of nice acts/events of sharing potluck + music live as we travel thru, exchanging/participating in lessons + even as a temporary local be invited into a workshop or 2 + take part. Or as we are looking up something for one with out a computer we want solutions via like ecosystem/subject + we will also try to share as we work our life.

Experiencing young + old awaken to another `way is a true bi`joy for what the elements bring to us. + It is educational projects like this that all should have an advantage to work to. As communities celebrate the goodness being worked, so all can reflect with hands on, not just via computer.

We want to exchange with people having difficulty with the elections + feel this can be a tool to go figure with, so your energy is efficiently used for yourself + your local community. + If have issues gather like folks/children + give us a call + we can discuss this as we rehash/vent + exchange some `ways that can trigger clarity in modes as we reach out + reflect with those that are fine tuning these issues.

When you get enough modes going your `way, as you work at pieces to your puzzle, you will be in motion from your good work fueling you now to more easily feel the connections. Prioritizing what to do when + where with who + enjoying it.

For **when you travel on a sailboat with a lot of bells + whistles, those all can break** leaving you very codependent + stopped waiting to replace parts or repair people if unaware your self. + This goes for any materialism you become dependent on. + They take energy to work, so take a look behind or underneath + read the amount of volts/amps so you know what footprint your are getting into. + Try to rethink this as you reflect with those that are locally self-sustaining without a footprint, adding traditional `ways that work + create upon them..

We traveled thousands of sea miles with a few solar panels + a water desalinization tool taking seawater + making us fresh each day, sprouted our small farmed seeds, as we stocked up on our natural small farmers grains/beans/nuts + seeds + caught fresh fish along the `way.

You can do the same collectively as a local community or singular depending on your usage + proximity of others, etc. So **do an energy use study**, it can be as simple as a form to calculate your needs + do it after you get involved with your local community `plan use review. **Solar Motive in Port Townsend, Wa** can share this with you for updates of more efficient products;

To define where best what should be as you lay out good math of the volts used + the volts you rid as you exchange alternative thought. Ya never know when your existing buildings might not be where they should be + **as a community you gain from working with all, from buying bulk from the farmers directly/coop, as well now you talk to them + know their needs + offerings as you work together as a local community.** For your local community. Not take your natural resources for afar leaving you without.

But when you learn the tricks of the trade as in the old school when people went to sea + had **only their inner tools working the elements, amazing**

sensitivities develop. Many people fail to put a value on our inner tools as we gain from conservation services, which we can do now, reflect with these ideas.

We know by our own experiences of still learning, but after approx 60,000 miles at sea, the wind, waves, current + surrounding sea life tell us a lot when we directly are in tune with it, vs. gadgets. + We feel the vessel in the water before we see it, as we did in the fog in Alaska. Or learn to judge the materialism we choose as in new spacial dimensions, when we know our tools, aiding our inner tools, not just rely on technology, but use it to enhance your own sensitivity as you wean off it.

For in the real world the elements are in motion + materialism is easily destroyed.

I'm sorry to not support the American Dream as many do, for it leaves out our ability to live free as we `boon with the natural world. When we create our space to live with each season, it takes us much farther thru out, knowing our entire biome(s). As we know we are connected with our neighbors leaving no isolation as we share natural resources. Too many folks isolate themselves to their back yard.

As **many emotionally loose it, when their own back yard disappears** as they know it, when they never gain this real sense of our wild existence as hunter/gathers, dependent only on our energy to efficiently maintain us in the moment as many migrated many miles in different ecosystems + still do if fortunate to harvest seasonal offerings, shared by all.. As humans observed much death + birth realizing what short time our human existence really is. + To develop sharp sensors as we reflect with those that live with sharp inner tools only are a true experience, as story is shared eye to eye, songs recording history as many still do.

It is these gadgets that are wrong in curriculum`s when tools don`t help us enhance our inner tools. + **we ask you to taper off them** or minimize so you can build on your community real offerings in each as they unfold + support not attaching oneself until clear, then you will discover that you never will, as baggage

is rid. Leaving you with better choices to listen + check in with early signs so as not to collect.

As we have experienced that **we should not have to wait until our skin falls apart to suffer to death** as people are now doing.

As i've observed in intensive cares in US, watching loved ones/new experiences, die. For it is this **material inability to process that clutches people`s grip**, as organs are depleted, chasing it. When death should be such a healthy experience vs. the suffering long before. Leaving people in mental breakdowns not able to know what to do with the loss of their loved ones, as Douglas went thru + we are welcoming him into community, as he starts to come out of it, after serious illness + loss of his hard work collections.

Not every one that passes thru present rehabs, with negative issues can get help. That is why with community effort in **sharing a tools shed, offerings are made by many to reflect with as inner tools are some times most important.**

A seaman i recently met is doing a **fellowship in the intensive care, for just this, as his experience is, no one gets close to people in the intensive care, rather they stand over by the door with computers.** The few i've watched triggered a lot in me, yet i did not have the skill to read what i was feeling until after a few more experiences. Know knowing this makes a difference in how one is diagnosed, treated + cared for. The tools are not sensitive enough to detect real changes as many of them are as some existing machines along with many insensitive nurses that are not in synch with doctors, as those nurses just follow their directions, not to mention lack of communication with family, especially when family dysfunctional + **they follow laws making no sense..**

then to have those sensitively skilled end up over worked or fragmented unable to do it alone.

When yet **there is a more sensitive humane `way. Dr. Yun Wang, in Seattle, WA, i speak of, has taught me that. With his Traditional Chinese**

Medicine skills + sensitivities. Which his sharing has helped me + others be able to get thru some of these ugly experiences without being subjected to more. As we would taper people off being over medicated + mismanaged into herbal formulas then taper off them.

Many struggle due to the layers of out dated/misinformation/communication beyond their pace of perception. As local resources go afar for others unaware that go to war, which is wrong. When **all that are self-contained can share awareness by reflecting to live local + keep it local, as students give hands on to those left behind**, until + with the restoration of appropriate rehabs.

No weaponry, do we support, to be bought/exchanged or executed, only recycled as materials can be used, as this whole mode is tapered off efficiently. Rather all should share awareness of living locally energy efficient, without footprints. While all locals are supported to protect your commons starting with local food sovereignty to show a path, as we suggest due to making it simple. That then **gives all freedom to choose your own path as you walk it into your opening.**

We do not agree with selected assassination for no one. Especially when one day supporting them + another day not. Too much baggage connected, that needs to stop because many were left with fragmented information, giving them the right to consider doing the same. This is not a good example for children from responsible adults.

project osic can surface these tallies with you for your reality in your local community to understand, so all know what is a good path for you to make it happen..

We just ask for a general sense of sharing specifics so our shades of colors are easily detected when we each talk about a subject. **Nothing is in stone +** we want to trigger you to do what works for your local community. But we also want you to realize we all are interdependent + there is no ecological isolation of no

category. + we want to talk good science as we see acts being applied for efficiency, that is the focus shared of all coming together as we build this archive.

Government/community/interpersonal dysfunctions, get in the middle of many trying to communicate. Struggling is struggling no matter what the reason, which interrupts the reality of people`s success story, which we want **project osic** to help end.

For we see now as in Barack opening to public for comment, which I gave my 2 cents, did you?? which i understand not many aware, for Developers, connecting citizen developers with tools they need to unlock government data;

<http://www.whitehouse.gov/developers/>

i'm not saying we have access of what should be transparent with equality to share our opinion before they act on it. But i do believe these can be tools for us together to define. For it amazes me the mindset some have that seem to influence people. Realizing many people themselves are not clear of how to stand their ground within nature`s limits. So this is a co_evolving process dependent on what gauges you decide upon. So please let this trigger you to set us straight + help us build this archive as we pool this focus with students + together direct so each locally define their own environmental limits. do_in good assessment of many factors that all will share to define if missing any via like ecosystem/subject.

Let us know a simpler format, another subcategorie or few in forum, to fine tune + simplify as you share what works.

i certainly know all the years i was preoccupied in what i thought was important, + none of that was being a responsible cooperative participant, nor did anyone ever invite me or share with me any of what we share with you here + in forum. i ether had my head up my butt chasing money or another misusing was interfering + i was always trying to go re figure. + i was working starting at 12, with all professional fields as well those with out, not to mention trying to raise others children then went on to wanting/having my own.

+ in this constant transition saw how ever one of those in responsible positions where doing the same, preoccupied in what they thought was right yet fragmented, never with any ecological or ethical true reality, thinking for the whole locally or afar.

Sadly, no eye to eye follow up with those choosing not to do computer, yet??

some of this information is yet to be understood. It is these local channels that we want all to take part in. **For if it is not suitable than Barack + his team wants to know.** For we support people to have a choice, but students in school need to learn both, enabling them not to run from their body as they chase their mind, as many now do with computer. Yet help them understand how special the tools are they have if applied responsibly for their community to truly develop with all their goodness.

+ Once student with in all give hands on + help sort out correct rehabbing, on to all coming to the cloth/table for developing/applying hands on with their restoration `plan networking, all will truly co_evolve with feeling the energies change in each + themselves..

We want each community to go figure..

Imagine where you are now, to do_in a community walkabout with your local students..

For they will take tallies, give hands on support, if you can` t, as you simply share your truth, without feeling guilty of what state you are in;

So now lets see how each can focus direct for efficiently seeing whom + what has been doing beyond nature`s limits + who is do_in within. + define who is in control of who, pulling the strings, making the shots, simply do_in good work or not, as you work with students to incorporate this into a now study + invite them all to where??

As students are guided/guiding teachers, supervisors, school boards, community leaders + members. Then do a reach out to those doing as i was for many years of my life, simply working my butt off, working to hard to cooperatively see how simple this can be, as together all restore your community within it`s natural enhanced limits.

Using good gauges as with agro-ecology as we for 1st time or maybe once again if as a Tribal member lost contact with the earth that once sustained you or maybe you are a wise one that has done for ever, that can show locals the path, as you start with obtaining your local food/medicine sovereignty;

As locals work + control your commons. + All those leaving negative effects invite into your local tapering transition as tallies tell the story of your true needs + offerings. As each is supported to taper into what is within natural enhanced limits, rethink + make wrongs right. Staying in the field or changing careers as each become a local participant supporting all to become a local, global + beyond responsible participant. + Now investors come to invest in modes as students have developments/offerings ready on the table, for local investment to stay local.

Do you see all the exchange, work needed, strategies + innovations needing one to fill the positions just on this last page for you + your community.

+ **It does not require high skilled people.** It requires compassion for those in need now left behind, + truth from yourself + commitment to come to the table with your fellow cooperative community members, holding self accountable + others for simple respect for life. + Rehab with what can, as support needed is put into place as you co_evolve within your potential as you work with + allow students to help you set your path for you to do your homework;

+ **Now you gain understanding of how interdependent we are as a global community needing our local biomes to be genetically balanced** + diverse with bio-diversity. As you network experiencing these conservation services that have always been here, but perhaps depleted + now can be restored if fortunate.

Which in return is enough to start helping others, do theirs, as they see some hands on application of the much over done theory in the many classrooms that are out of real time. Leaving to much to comprehend when yet students are proving to be less active physically which is interfering in their health.

Not to mention **many students are subjected to much stress not living within their limits**, nor knowing how as they see family members without, not knowing another way. Then to carry this behavior as normal + then on with friends to technological tools to try to define self as they bond with something real, then expected to comprehend another displaced curriculum that many are fragmenting with, none of this is real time flowing good science of how we process our mindbody + is mentally over powering, leaving no energy to be physical.

We don't have to be a brain surgeon to figure this out. Bill Clintons` CGI showed how inactive young are compared to how they used to be, as well projecting terrible increases in the future that we can change asap, after you take few notes here. **Calmly go thru + apply to your self + loved ones**, post if in need or can share to sharpen your sensors + plug in + network via like ecosystem/subject. No one has to do this alone, we can make this a true bi`joy experience working with our natural world, feeling life energy come thru us in an exchange;

Then on to work, **inviting your students to help out more** as you reach out covering your local community.

Then to **have an interchangeable role for all to responsibly stay up dated** as they take turns coordinating + posting in your format you choose, whether using Nabble or not, giving all a sense of reality that this is my earth to share + be part of it as well beyond. But we appreciate you coming back even 1 per community + post building our archive, sharing what works, what doesn't + together we make it a great tool for all to check in with + fine tune what to bring home to further define, customizing for themselves + their community locally to self-sustain it's natural restoration + maintenance.

Adding an itinerary for events do_in as we suggest in – **i come to talk story - forum**, for all to take part in + enjoy. **So please folks for efficiency start 1st time reading in order to make sense of all** the yada yada from many good folks, simply trying to live, some not so lucky to have the tools now we have as well those aware to reflect with sharing yet another light to lead our path, for you to build yours as you walk it into your opening. Supporting all to do the same.

Not to mention check in thru out the day + reflect with your effects left on self + others. As awareness of how you local community needs to responsibly link with the world so life on earth is better for all + we stop the many from suffering, locally + afar. + With students tallies we do it efficiently.. Letting these tallies tell you how to vote, how to redirect yourself part time, maybe full time for your support, giving hands on when can, logging in for yourself if can, or ask another to help if can't.

Sure **this can be kept simple** so you are becoming aware locally of what you can do, as well **students will aid understanding of how we need to participate federally/nationally + locally in priority, not to mention internationally as we responsible become efficient as a cooperative community.** Showing others how to + learning how to, as we pool our thought + come together in the building of this archive. As we then co_evolve with you, making changes on forum.

We don't need to focus on the global changes, earth will take care of it self rather focus on what you can do to you + to another now.

+ Go on + **truly enjoy the exploration of `booning with our natural world** + the many cultural connections created with it, when it is in harmony with simple respect for all life. Even you folks displaced from your homeland, right now find locally like ecosystem/subject + share, + **we all will work for the reality of everyone being able to transverse + choose responsibly where to live**, as we make changes now to share this earth with respect to all life + stop the war mode economy as well the large energy farms from others interfering in locals ability to maintain own commons.

+ Sensitively work the wild, as this is the only way we truly co_evolve our human species + enjoy optimum life on this planet..

Together we rid our baggage, self-develop + as soon as our energy permits, we do what is comfortable for each, + plug in do_in 1 of the many needed community tasks from sitting positions or even lying in bed, to actually walking side by side as you aid ones path, aiding another, then on to do_in the choices that open up in front of you as now you are not just looking for a job.

Rather **network + experience those simply living as they daily have their hands on what sustains them as they harmonize + make it happen;**

Music fills the air, art is lived while natural conservation services add more tools as a resultant of down scaling the waste. As they lower their amps + prioritize function energy efficiently.

You can recycle upon what once, many thought where good ideas, if it doesn't succeed nature`s enhanced limits, fueling more energy.

Integrate as you engage in it + co_evolve with life in motion. Your self for starters + in having this respect for life, you become energized to work into part time total self-fulfillment as you continue to maybe dig deep in what you had buried, by perhaps being preoccupied. Now go to that subject + volunteer, then once you are clear after exchanging different roles that help those in need along with yourself.

Seek out new paths of study, don't just isolate because your local community limits you, rather plug in responsibly to see how best to pursue your direction. + Go after it starting with a pen pal, so now you can also get to know another ecosystem/subject of choice as you reach out to them perhaps aiding their community building for the experience. Which also gives you a different perspective with what you are do_in locally. + **by the time you are done with prerequisites you become clearer in your furthering of your education.**

This is how you can **walk into full time self-satisfaction**, as you are clearer with your studies + the directions you have laid out in front of you. In control of your choice + do_in what feels good to you, as you co_evolve + explore the world, locally + beyond.

When **yet so many see no options + feel trapped**, unable to responsibly act locally as baggage builds. Do you see how you can add to this tool for yourself or another.

Where now **you easily can leave a local position, responsibly**, knowing it can be fulfilled. Or maybe rid the position, + your local community co_evolves it into an act of completion, giving support for each to fulfill their exploration afar, if that is your choice.

Please don`t settle for anything less..

Just don`t leave any footprints;

As the student within you that now awakens, wanting to stay youthful as only in this state can we have the best inner tools to be clear, + be fueled to truly to explore the earth`s goodness + beyond, where ever we choose to put our feet.

Nabble helps us with forum/archive to have excellent communications knowing you are working on your needs being met, + ours the same. As they offer freely this virtual tool to anyone of age, please check their support for updates. They gain by advertising, so **please remember we yet to pay to have it removed, so none of the advertising is from us, it is Nabble`s way to support their free support to us + you.**

So don`t blame Nabble for my yada placements, nothing is in stone + we can make changes together. Contact us in appropriate subcategory + let us know your feelings.

While **each community works with locals to go figure, students will learn great responsibility for self**, all life + know the verbiage of science. As math in tallies/solutions are shared locally + afar, from good hands on experiences with community, understanding good science taking place as each co_evolves with sustainable tools.

Along with **experiencing hands on support, which is a very good interpersonal reflection as a learning tool**. Not to mention fill roles to network locally + afar as they continue their education with their interest as they fulfill real local issues.

Leaving all well prepared to stay in the now + be self-reliant in the wild, understanding how ecological bio-diversity sustains all life **as each learn to be comfortable alone in it**. Fueling all to explore the world + beyond, after their local prerequisites of maintenance are done for school + local community.

No more as in present, where **Barack** is trying/passing policy/supporting ways that work, but only if all utilize + apply as it is integrated into existing realities that need to be tapered into + then further fine-tuned differently for each community. Do you see the layers here?? On top of what many already have/if aware of dysfunctional behavior passed on from family attempting to survive?? Take a look within + now ask around + what do you see?

Not all people review the **Whitehouse website**;

www.whitehouse.gov/

Nor should they be expected to if they do not want to use computer. So does this mean than they should be left uninformed, no.

This is why **no local/state/federal or international entity should rely on computer without also having means to do eye to eye communication** for local cooperative, responsible maintaining + ongoing restoring of each community.

Same with **Organizing For America with Barack Obama's entity**, for we need to understand his responsible role + what business he is involved in as a president now;

We don't share this because we support his campaign alone, rather we are welcoming them to try to help us define, how together we can make changes. + hold responsible roles accountable + change the dysfunction.

We want you to cooperatively responsibly act so now an interchangeable role is respected + all on same page with local happenings + it is locals that decide what is to be shared afar. Not a bipartisan display of simple respect for our president.

Not a wasteful campaign interfering in our presidents work. Rather lets hold Barack accountable for his wrong doing + support him to change + take note of all his good work in progress, please don't just whip lash our citizens in a 360 reversal, lets finish what needs to be done as it co_evolves with each one of you as you come together as a cooperative participant + live local, + share what works afar, respecting all life as we regain human values.

Lets stop these negative acts from happening again, as we create upon what should be in priority, not just respond or act on them. Mitt bring in your goodness, + why have you waited 4 years to offer them, if you saw an answer before this?

This **funding is out of control**, when so much could be used in your local projects + as in **project osic** to make links in the process as real issues are resolved, so i'm not supportive of either candidates funding campaign. + i've closely followed Barack's wanting funds + never letting up, not ever realizing if my many suggestions where even read or considered, as emails where generalized for all i believe + they would have to answer this at

www.barackobama.com/

for i do realize how busy Barack is at Whitehouse + want to respect all of us to get answered, not just from Barack but as we cooperatively efficiently organize, as we offer this to trigger your thought. + now with campaign + daily reads several emails, while a team tries to read all of them + sort them out. So i can't just expect an answer. Although it may feel depleting we still have put effort into asking him questions/suggesting as well try to study Whitehouse offerings online..

but think of this what if each issues was supported with campaign money as the issue was restored, do you see how next campaign would never repeat what happened, rather we could look behind us see communities restored with all those funds spent here from both sides.

Each should go eye to eye or talk to representatives + give ample time to discuss as people in each community come together in **project osic** as an example. A 3 min response time at a town meeting is not a solution by far + we want to see it changed. As well Barack thru out his campaign has given many chances to take part in a draw to have a payed means to visit him.

We support you to understand this as a responsible community participant, not as irresponsible lobbyist. Rather we want dysfunctions to end + we want all people to be respected for their work. So if you do it locally, then you can share what works + for that which is not applicable, then pass it on holding other locals accountable for sorting out their baggage.

We do not support campaigning with funds at all. Rather local communities should have interchangeable roles as each responsibly efficiently represent your local community + in our linking of acts afar for our global responsibilities to be in tact. They are not + can be with **project osic** being made into a good tool.

This is exactly what students can do as they should be required to understand + use this computer as a good tool + apply understanding of our restoration potential, within their local communities. Giving them a sense of reality to interpersonally align themselves with their local community obligations.. As all gain understanding in each local community on how we are interdependent on our

ecological balance of our genetic bio-diversity, as our best medicine, for our food + our local sovereignty. This requires us to link globally. Leaving no ecological isolation of any category.

In do_in this many stop doing wrong, + now we can efficiently address negative issues around the cloth/table platform as we calmly move on, leaving no life behind.

Virtual tools are handy but it is wrong to exploit them. So an adult should have the right to learn or not, + the local community should not be dependent on them;

But as a tool, utilize their goodness. As an eye to eye parallel of communication is established also, where people have a choice to function simply without a computer also..

i stress this due to my experience for it is not easy, but it keeps us real with real time;

Leaving us to resolve local issues for our self-reliance that leave us in tune with our self staying within our skin.

Leaving our sensors sharp, as we self-sustain + gain from our engagement with the wilderness awareness as being a back yard resource. Filled with an abundant of conservation services. That can free our self of importing from afar, that which we can produce locally + stop exporting, unless it is a good tool that can be helpful. Yet too much for a local community to manufacture just for themselves. + This is where good environmental science comes in, knowing when not to interfere in a local`s ability to self-sustain.

As we share this, all come aboard + do the same, + can share this earth in peace. **Not have to support fear base or paranoia thinking weapons will resolve** our in differences, when yet our own congress cannot agree as they resist each other or resist our president now. As each different president shifts as bipartisan misinformation builds + wastes people`s resources, including their own. As they may not be clear of their local`s agenda in real time.

This should end, + we **should have no party as people represent their local community**, + even that should be interchangeable so each responsibly inter personally develop + cooperatively build their local community. vs. be over loaded dulling sensors, chasing agendas or simply lost trying to dig their way out.

i say this over + over.. so please rethink.

It will be interesting to see the tallies of people as all rid baggage of programming within one self + our communities, as we see solutions rise..

To define how many need a military mode/existing regulatory boards that over lap, once local community is clear sharing awareness, taking responsibility with good rehabs in place, aiding their self-reliance. Leaving no one left behind.

As many now see positions they want to create or fill temporarily as they get clear to pursue true potential. Supporting all to do the same as they walk side by side in a walkabout, 1st locally than afar.

For government to be producing/supporting people to use natural resources + funds from all, to support military afar, sell + implement these weapons against another, is not a decision shared by us, nor many of them. Peace Action West shows us this detail of exactly who is resisting what for all to review freely, check them out + subscribe to their updates, + share with those without a computer as you regularly have your community discussions. Take turns logging in updates for others to catch up..

Same with **NIAC** making us aware as they stay on top of who is doing what;

<https://secure3.convio.net/niac/site/Advocacy?cmd=display&page=UserAction&id=237&autologin=true&JServSessionIdr004=7zmbwhx1k5.app332b>

Ex: i share my email to Senator Jeff Merkley, + i think this is absurd to even have to do this, Congress is just not responsible establishing peace negotiations as a global participant, as we can do now in 2012. i can't imagine how our grandchildren will ever survive thru all this if we don't stop this foolishness now + walk by our children`s side + together resolve as sharp minds, young + old, now work together as they then include their young ones when appropriate, if unable now;

Jeff,

i am writing to express my strong opposition to a recently announced proposal to provide unconditional U.S. backing for Israeli military actions against Iran. Senator Lindsey Graham says he is moving forward with a measure in November that would promise U.S. troops, money, and political support should Israel attack Iran.

As your constituent and someone deeply concerned about the prospect of war with Iran, i ask that you take a firm stance against Senator Graham`s proposed measure and provide needed leadership to prevent war and support of a diplomatic solution.

Should this resolution pass, the decision for the U.S. to go to war would be effectively outsourced to Israeli Prime Minister Benjamin Netanyahu. Americans do not want to see the U.S. enter another disastrous war of choice in the Middle East, and they certainly do not want U.S. leaders outsourcing such a choice to a foreign leader. 59% of Americans oppose the United States getting involved if Israel strikes Iran according to the 2012 Chicago Council on Global Affairs survey.

Senator Graham`s proposal undercuts U.S. civilian and military leaders while goading Israel to act. The Joint Chiefs of Staff`s Chairman, General Martin Dempsey, recently warned, "i don't want to be complicit if [Israel] chooses to [bomb Iran.]" According to former Secretary of Defense Robert Gates, "The results of an American or Israeli military strike on Iran could, in my view, prove catastrophic, haunting us for generations in that part of the world", and "such an

attack would make a nuclear-armed Iran inevitable. They would just bury the program deeper and make it more covert."

War would be disastrous for the people of the U.S., Iran, and Israel. A new study concludes that strikes on Iranian nuclear facilities would kill 85,000 Iranians. Iranian civil society is warning that war would bury the hopes of the Iranian people for democracy and human rights. Iranians are already suffering under sanctions that are increasingly failing to distinguish prohibited transactions from permitted goods like medicine and food.

We need leadership to prevent war and find a peaceful, diplomatic solution to the standoff with Iran. I urge you to stand up and be on the right side of this debate, and the right side of history. I urge you to strongly oppose the Graham resolution.

I personally offer our project as a model in the building now, as no one should be supported to be aggressive especially when they have not completed responsibly a peace negotiation over 15 years as is in this case. This goes against all our good curriculum that students are confused with as you in your responsible role allow such lack of homework, as we can set this path clear within peaceful research, as we take healthy minded students + skilled professionals + resolve what is detaining, what is the real issue + why the US is allowing so much dysfunction to continue both in Congress to even consider such a proposal not to mention the UN, as well our interrelations with our global members.

This cannot be pursued from the war mode economy people to gain profit, when yet humanity is held hostage.

Please do not give any one power that has failed to communicate skillfully + let us help you with this review that needs to come back to the table + good science applied, not fragmented as we lay out the facts, replace the worn torn threads + rid that which is unethical as well leaving ecological negative effects now as well to all of us.

for we are interdependent on the linking of our genetic bio-diversity + with

out we will also go down with them their locally if aggressive acts take place. it may take some time + already the many issues are proving to hurt our health, from the negative acts out in the world now, where our bio-diversity is being destroyed, microbes are becoming resistance as more spaces are allowing pests to become, + health will decline due to our ability to not stop this madness, for this is our sustainable wild that requires linking globally, when yet here at home, locally we yet to balance.

so we have work to do now with our local resources staying local, as we can network what works for others to do the same. no more exporting no more manufacturing for large exports. no more attacking Iran when they have showed us proof. take a look at their facts please. for it has been inhumane to let any bully that has interpersonal issues continue all these years to leave such negative effects on our human family, take a look at the medical/psych reports of the children their + here, this is our human family we are talking about.

peace can be option now if we share what works + allow those with sharp sensors to lay out the facts with good math, letting students help as we co_evolve this long over do process. + do it within our human potential to be calm + create solutions so resources can go back into building ecological sustainable working communities. where all live local + share what works, while we all come together + end this war mode economy + what triggers as people fall prey yet to know they even support it.

our **project osic** soon to be distributed will show these tallies + all of you will be asked to come into a tapering transition, so together we resolve with good data in real time. no more will people say i didn't know what we have been supporting for now we have the tools to collect the truth + share it. along with giving human respect as well for all life, as we taper down while sharing alternatives to replace that which so many have come accustomed to, as now people realize the threads attached + they are + more will cut them. saying no thanks we found another way. then we will see how much longer the dysfunction will survive, from those that fail to let us help.

Peace is an option now if we share what works..
end..

begin..

wow folks i`m working so hard to get this to you ASAP. + reach out to many along the way. So please forgive the disjointed ness + I hope you do get the gest of it to trigger your thought. But i do hope you take breaks, which i`m not, but i just did. Gather some fresh salmon off the dock or tuna/crab, by putting your name on the list, to buy direct from the fisherfolks + they will call you to come pick it up fresh.

i **just made some really yummy burgers**, filled with Indians /Mexican/Moroccan + more as we see the goodness different cultures give us;

Spices of turmeric, cumin, coriander, garlic, red pepper variety, seaweed dried + crushed, onion chopped + a big one, vegie burger mix of garbanzo powder, pressed oats + left over cooked brown rice, eggs according to batch size, i put 3 + topped with soy sauce + crushed black + red peppers + coriander. Hard to have any left over for as soon as they cool to eat they are yummy. It is also good with left over vegie soup, wilted vegies to chop up fresh + mix in as you recycle your weekly shopping. It is nice as chunks like a burger if want to finger it, or a pilaf, to add a fresh salad with buttermilk/ yogurt dressing is nice with less mayonnaise + powder for a buttermilk dressing mix.

But **choose wisely with what you can handle** + do a variety of above, not just all in 1 meal, best to keep it simple, so 1 time use some of above + another try the other.

+ yes we`re **sorry for the many still without food**, as i share with my neighbor as he smells my cooking, + now he is learning when has resources + when not we share. But i`ve been in countries where they would smell, yet many meals went by before we were aware they where without.

This is how bad it is when parent do for their children rather with making them understand what is really happening locally + beyond to all. As in i was lucky to have toilet paper + always good tasting food, mom + dad never realized how

greedy people where to make processed food, or toxic fertilizers for more yields, GMO`s or prevent one from using grandmas seeds + exchanging, etc stripping the nutrients which is very wasteful, which they then learned later in life. + **yes I was naïve not knowing everyone did not have food or water or sanitation back then, which still many are without.**

So **think about this + buy direct bulk with your neighbors from the local farmers** network, + just put on a pot of nice natural grown whole grain on cooking to lead your path of what to eat when + diversify with nice buckwheat regularly eaten in Russia, or as millet in Africa, or amaranth + quinoa from S. America, wild rice locally, etc. + for you folks that have a problem digesting try adding a soak with probiotics, as i + many do with my mushroom drink we make, that many around the world do regularly for all ages. Not to mention as in Russia 2 big jars of it + children gained respect early on not to take food from mama, always to leave enough + go to the next batch, as they would participate + all chores at school + home early on.

begin..

i say this yet **we realize this pdf will be isolated for people with the internet to efficiently appreciate as you** can review link + then reflect, go on, etc.. As well subscribe to how ever is best for you. But we do ask you to please think about all this + cooperatively take responsibility now + share with those without computer. Don't wait for another to do it, rather call in/post/email folks young + old, as all take off their hats + start with a `way do_in as you review some ideals as well post, + use our forum for your community to check in for updates until you decide something better for your local gathering + share so your schools are welcomed into your community so together you **go figure with project osic + help us build a good tool.**

Than as you get clear + organize, + if you do your own as with **Nabble**

www.nabble.com/

create a forum/blog what ever, than **still have representative come back as a community + keep us updated** + share what worked, share the issues + open to others input, etc.

We want to see these tallies as they co_evolve with good local/afar policy that gives feedback to us all. To overcome those that just want sales + people to use their resources as they make funds over war or peace.

This is not us, for **if you maintain sharp sensors you will redirect, not controlling but rather reflecting this difference for young + old to gain experience to responsibly act** from our local/global offerings/interactions.. not hide them from it.

This is the problem we are facing that we can harness + i told Barack that today (8.27.2012) as he expresses his inability to match Romney`s campaign funds, as i said money is not the answer;

As in identifying this truth of all these layers, leaving people unable to utilize good fragmented effort i`ve experienced in some programs, yet waste in others, as **congress had restricted so much, which seriously needs to be debated until resolved, with the public with sharp sensors.**

We all need a local tapering transition for some issues as we work into new programs offered, as curriculum co_evolves as students of **project osic** trigger each to thread + prioritize with each local/afar community. Which some issues are not even seen by some because they still yet to focus as a community cooperatively, due to many left without, misusing/abused?

We feel we can gather an interest as we focus on local food sovereignty, sharing like thought pooling our resources bringing us together to than focus direct a `plan. Meanwhile while students are collecting tallies as they give hands on, no one will be left behind + each community holds it`s ground. As local commons is protected + worked sensitively as all learn to `boon with in nature`s enhanced potential.

In many exchanges, still **amazing lessons can be a stepping stone, as in a simple recipe shared over eating together**, as we become aware of our inner tools to judge as we experiment. + How about being considerate to aid another as you deliver them a meal you may make at school, as you creatively make reach out programs or invite them in?? Or you get to eat with them as you where giving hands on with a chore??

i can't tell you the bird food i've made from not being in sync with myself. As other times it **amazes me how i need no measuring tools as i improvise leaving tasty results as my sensors perceive..** + i take note as i check into myself + observe thru out every day as i continue to rid my baggage.

This contributes to why, organic food, which should be naturally produced food within the natural world`s enhanced limits. So food is produced locally with all life respected that grows it, microbes + yours. + Reasonably priced. Not to mention our past generations saving their seeds from their local ecosystem, building healthy soil + wild biomes for all genetic- biodiversity, yet many local live out of balance.

What do you think?? Has this earth ever replenished local balanced biomes with healthy wild genetic biodiversity + linked? How about when many Indians were free before their lands where taken?

Sustainable food comes from naturally syncing with all life. Yes many have exploited the cost of organic which is wrong. But to have sensitivity for all life + not exceed it`s natural limit, which some can be enhanced as in agro_ecology, with still this being a good gauge. Many factors are not considered when they speak of this, such as origin of needs, offerings + waste of how products produced, by whom how far away.. So it is an efficiency we are prioritizing + this can sustain more local life. vs. Just higher yields traveled farther., leaving negative local effects on soil + all life.

We could not believe government wanted to pay us not to plant a specific crop. When we could of sat down + discussed whom should plant what as a community, listening to what the land speaks + working within the potential for all to be marketed. Which is what we want to achieve here as tallies show another `way..

The **fertilizer atrozene was used on our fields by prior owner to give more yield yet soil was depleted badly from it along with it`s monoculture crop.** This type of farming should of ended long ago yet still many are fighting it as well i just saw 90 more chemicals from 1 source, that are toxic.

Prof. Miguel Altieri has proven in his over few hundred tests with indigenous that you can with natural plantings/natural fertilizers, show yield is similar yet no toxic health effects;

Which is **good science integrated on a social-political + interpersonal level** as each community comes together, networks globally, as all focus direct for our ecological potential to fuel ones path to co_evolve + resolve with good changes..

Not suffer to death prematurely with toxic exposure to chemicals, that natural `ways can replace + indigenous reality still being used thru out the world clearly has created his curriculum.

Not suffer to death due to lack of genetic bio-diversity in our local wild within every balanced biome supporting life, supporting pollination for our food/medicine, supporting us to heal with natural alternative herbal formulas that have healed from the beginning of time, well used thru out the world.

So why is it western medicine for many is isolated + fragmented as doctors say there is nothing more we can do, when yet they simply quit studying, as the world has answers for us to taper down + replace + than taper down + rid along with change of our behaviors. As we tune into our self + our natural cooperative ability to restore our natural balanced community + take responsibility holding our self + others accountable locally + beyond..

When yet many alone get so attacked when going against mainstream trying to keep their positions wrongly.

We can further gain understanding of the root of our human species fuel. Which only then can our communities sustain us. + When our commons are balanced with wild genetic bio-diversity, + we globally link, more people/life will gain this natural fuel + harmonize. **Needing less intervention from anyone afar. Accept to exchange the goodness.**

This to some is very tongue twisting/incomprehensible psycho babble as many still are left with **too much baggage, to see a way**. Plus the layers left in society by so much dysfunction with the social-political mode is truly beyond humans potential to process neurologically. Let alone with the present fragmented curriculum. Along with teachers/staff struggling with the dysfunction from students/community, presently not syncing co_evolving curriculum, not to mention a student coming to school hungry leaving it harder on teachers to teach them.

As each of you can welcome project osic into your local education system + come help us build this archive as a good tool for all.

Yes **luckily we have those that just reflect good energy to rethink with**. As energy shifts + acts take place with little words exchanged. This is what we want to hear about as archive builds. Yes I personally will continue to work at ridding so much yada, but it is their for those that still need to understand. + Take the time to do their homework. To get out in the natural world + living inside the same as with outside air. Will explain more of this later.

In **project osic the world can efficiently exchange what can resolve, as those that can comprehend can reflect the simplicity it can be**, etc.. Making market/government wrongs right, which we feel many are trying to do. By letting all take part, no one cannot do it alone. Good science of application only can replace these worn torn threads. Where then a policy is

understood/applied/shared/followed up on + corrected vs. good ideas left in files, not being accessed or people not even aware it exists.

We each must do our homework, which we all have difficulty with these worn torn channels that can become tunnel vision, leaving no space for some locals to take part. As **we must go within to understand the tools fortunate to seek out + define when best to cooperatively act, as in building this archive for our communities to fuel us + when best to inter-personally respond to fuel yourself..**

Meanwhile **local jobs become over regulated**, with people feeling like no one listens. As they are just on as if nothing/or anyone else was important. But we cannot give into this fragmentation or interpersonal triggering of left over baggage, etc.. We must Get real + link with local folks + gain support for this detail. Members/students can aid in truths on both sides, as all connect good science of application, re-threading efficiency for simple respect for life in real time, efficiently..

Ex: As Set did as he discusses with us his fishing reality + honestly states he cannot due his job efficiently, which is very hard with the existing over regulations, not being sensitive to timing as they define the days, not allowing them to consider when best with weather. So he asks if we mind sharing with his wife that is interested in understanding how she can get involved to make changes with an existing regulatory boards upcoming comment period for the Maguson Stevens Act in response to our last comment period + more..

Good science integrates making it common sense to pursue clarity to override this resistance/sense of attack as it keeps a motion, as all life is in. yet many have no clue of what is common sense in other cultures, so we gain a lot by sharing with the world in an exchange of what works. Ending the programming that we are the best or we can show you the way, rather than a `way;

Whether general assumptions or real negative interference, as they trigger baggage in some + reality in others to thread solutions as together we address these early signs.

No healthy person truly wants to leave negative effects on any life, human nature is above this. Yet we do. **Our neuro-processing has a wide range of comprehension** + as we tilt many lose their `way, then to be enslaved by oneself or another or simply ride on another`s wave. Short sighted of our true effects left on others. Meanwhile others could simply be out of real time as they are overworked chasing solution from their limited perspective/control of others, etc.. we all have been guilty of this. So all this produces the disassociated energy that leaves negative effects as it interferes in serious work, that is required for one`s survival.

Many are self-developed utilizing good tools from indigenous traditional `ways with simple respect for life, yet technically co_evolving as we create within nature`s limits. Which we must also deal with the many unnatural states of negative issues. So best if a representative posting for your community is in an interchangeable part time role. So as not to distort good energy to go figure from own interpersonal ability to express what is. vs. being consumed + lost in layers, due to others not doing their homework, noting be clear yourself to perceive truth.

Please leave no space for another to decide for you accept when unable, then react with early signs. + Be open to constructive exchange of perceptions + follow thru when convenient to see what it triggers within. Tell the truth to another when you feel you can follow thru or not. **Sit down eye to eye,** + get to know yourself, your loved ones + your local community tools as you take part restoring them cooperatively.

Not isolate to computers, rather just use the tools to bring us together so you create dialog in the present with all facts experienced within your reach + then act in real time, being able to refer back as a reference.

Even our **project – i come to talk story- tries to help you not forget your self.** So take notes + do this after you do what you feel is important so you can calmly sort this out, so as to go slow with it + apply + experience. Not awaiting someone afar to act/buy or control you, rather they take part with you. An exchange to better `boon with your like ecosystems/subject for all local commons to have locals stay in control of it. This is what good investors support.

Which **this takes cooperative ongoing meets to do this with your part time commitments as a local.** So make this a tool to carry with you for life so you regain that youth, that student within as you walk side by side with your local students/community. **Whether your stay is permanent or not, you gain as a participant to than walk as a local anywhere.**

For the wild genetic biodiversity that creates our commons, if out of balance, is our local fueling life force temporarily. **Only** when each local community brings their commons into a working balance + link, will our life truly sustain + co_evolve on earth. For **there is no isolated ecological category. Each is interdependent on others.**

Can you imagine going to congress as a community + not accepting what is said, not to mention as president having such resistance.. + Now with sharp young students we make a connection with clarity, no more thought that doesn't connect.

We need acceptance, acknowledgment, admittance of misinformation/wrong doing + connections to integrate ASAP with respect to a local tapering transition for all efficiently.

This is how our human mindbody works best to move on as each rids own baggage, making space gripping the misuse/abuse. Stating what is, moving on exploring this unique earth + beyond as we share awareness for each to simply respect life, listening gently to early signs that are given to us all if we maintain sharp sensors.

Meanwhile legislators need to find their place in local community + make space to then responsibly adjust their dysfunction in their present political position, considering they get paid + we don't. We all need to rethink this paid position. Yet give cooperative support for all to hold self + others, accountable locally + afar. So **in your meets welcome them in.**

Where again it brings us back to **starting with our local grown fresh food sovereignty, locals controlling the commons;**

To ground the local reality of good gauges to then invite local investors once they have experienced the local tapering transition as all rethink their intervention. You may think at 1st what about starting with all the other professions of many that it takes to build a community that works. Well each of you has to be fueled to do your self-expression right?

We want to keep this simple, deal with the nuts + bolts. Fisher folks/farmers are the fueling force if they naturally can do freely their sustainable work as we support them in cleaning up the past/present pollution, bringing wild life back to a natural balance. Not farmed fed or GMO/toxic pesticides + fertilizers/monocultures, not emotionally allowing wild critters to interfere without a managed hunt, etc..

But real gauges in place with indigenous `ways that work as with **Prof. Miguel Alteir`s agro-ecology** or the many good in `permaculture now as with **Jenny Pell,** etc. Not to mention the many **good moms** as with **Wendy + papas** as with **Daniel** raising lucky young, as with **Ahanu** + friends offerings, with hands on from the beginning, as they simply live with respect for the natural world.

We are very fortunate to have many good folks to reflect with now that are working with hands on with what sustains them, which fuels them to share experiences as we all continue to prioritize our shared focus.

Look at 1 of the many **good projects, that networks community offerings that you can join into, starting at a young age** that we link with, giving true lessons to

young + old as we simply grow our natural food, make a meal, learn the science of simply integrating our chores + maintaining our self responsibly, as we take part in building natural communities;

<http://edibleschoolyard.org/>

This is why our international affairs, along with local are fragmented. Due to these lines of communication not synching with reality of what is, nor what we perceive thru normal media. Many prevent people from knowing the truth as they fail to prioritize a focus, that is actually experienced so all on same page as reference point, leaving much fragmentation locally + afar.

Not everyone is so lucky..

let me share what i suggested for a product on Baracks` **MyGov**

transparency software connecting every global community + i add here to comply to our ecological categories that have no isolation..

yes a simple priority list of the reality of what we all face globally, showing tallies as students aid the restoration with their local community, reflecting with a gauge via like ecosystems/subject..

putting these high risk planetary issues + beyond in retrospect. so now as each fulfill our interpersonal + community obligations + share what works. we then get to explore globally as then to continue our education + share along ones path.

making migration free to all as we work thru a tapering transition as real tallies of our human shared common denominator track, such as we suggest starting with local food sovereignty.

so we know now the effects left on our natural resources from each weapon, each development, where tallies tell the stories + when locals unable we gather global support, all by tallies that have human compassion for each one behind them.

we are not a machine but we can create a great software to be transparent in all we do in real time.

we than can check off these tallies of many + have a gauge to refer to, so now we have a perspective vs fear base. now we can reflect with those in harmony + know where we fall + what is lacking enticing local creativity vs just compete.

now we can fulfill our local community potential as well rehabs to work with each personal energy ability.

Please don't short sight yourself, we can gather good scientists + good stewards that are indigenous simply living + together make simple common sense as we all have the opportunity to engage + integrate simple science.

+ This is our joy experiencing/sharing offerings as conservation stories bring solutions to the cloth/table to trigger what can be brought home + modified, as this archive builds, as what we proposing in project osic.

Many corporations have entities under mother corporations, so if you do see something you like take a look at the peoples footprint running it, + follow the threads to all their entities. Same with those being bad that can move so fast. so we welcome them into a tapering transition so we have no flaws in this piece of technology that each community will take part in.

This is why we need a new program now, for when Barack spoke of RED LINE + Netanyahu 15 years trying, + Iranians thinking they are peacefully complying isn't acceptable, maybe for those with dull sensors, but we want early signs to be clear when people are disrespected on an interpersonal level, where we regain human compassion + share when people show how dull their sensors have begun + aid this restoration process, so Israel + Iran + all communities are living peacefully, not like this fragmented chaos that than goes around the world, leaving such mixed signals in young + old.

We need to be updated in real time with all as life co_evolves.

We have enough good tools to make this happen. This `way we can establish whom where + when we can cooperatively act when those locally are unable. + As we see these networks irresponsibly or simply unable to keep up locally, then this is when patches` that can, will help define the issues at hand for these pockets` unable with early signs.

Triggering us together to figure it out, as in the next` move do_in subcatagorie on forum, bringing good minds together as we are do_in in - i come to talk story, which we welcome all to come build. or we merge or share where best to easily reach out + perfect the missing detail, as are tallies tell.

If someone has something to hide, then something is wrong + we need to look at these early signs that we can change..

Do you realize how simple distrust can be a deeply rooted problem as baggage then piles on, + mixed signals become confusing. As in Ex; NAIC working on their conference + in their facts feeling Barack`s administration does not feel they are building a nuclear weapon, than to here what they did at UN, without something to back it.

We want to put this into real live retrospect now, with those working for peaceful communication so we can get to the real truth so globally we all are on same page.. we need facts of ex: this story so we give others a chance to give peaceful resolutions now, for real people are suffering due to lack of structure with these gauges + tallies in place..

Do you even think of the small children hearing their parents discuss this as many are left in fear? The psychiatrist/medical reports?? We need to look deeper into this + resolve solutions as we harness this disassociated energy that is harmful. + If we have an open platform where all can express then those that are sensitive + skilled can better observe to reflect with those still in misuse/abuse so as to aid their self-development. As we reflect with solutions from those simply do_in their work in harmony, as many are fortunate to do, when they respect nature`s enhanced limits.

So when we ask our self what effect we are leaving on our self + others, we need to follow thru clearly + network with such an organization + start locally to network as a cooperative community knowing your neighbors, making an interchangeable role for your representative to log as you share for all.

Please do your homework it is our obligation to understand our interpretation of our interrelatedness between natural divisions. + As a community many can share this as indigenous locals lived/living within these limits. + If no locals then seek them afar. Don`t just act to feel good, make sure no footprint is left in the process

+ if you reflect you will see that interacting goes beyond feeling good. It fuels our energy to gain mental clarity + physical strength.

this gauge comes from the reality there is no ecological isolation with any categories, i repeat, it is only our cognitive perception + that we can change, we as the human species is dependent on our global linking of our local wild biomes with balanced genetic bio-diversity. so we are not taking math out of the sky, we are being lead with real in time good science working within nature`s enhanced limits. so this is all interdependent for all life on earth.

again i say starting with agro_ecology with Miguel Altieris` work can set this path as a good gauge.

Tags: [sharp sensors vs dull deciding for others](#), [when to decide for yourself vs. another](#), [local prerequisites to interpersonally develop as a local](#), [global + beyond participant](#), [gauges for peace](#)..

end..

can this end? Yes, how you may say, take a look at these comments 1st that we could really appreciate more transparency, in the reality of how this equates to what we do everyday in our sustainable chores as those living simply with nature put into retrospect, when yet many local communities, not to mention people that are not yet cooperatively involved in community, have no good sense of this, or if they do, what to do with it. So don`t you think it is time to be efficient with what we do with hands on, all the `way to what we support, vs. what Washington thinks should be.

Not to mention the effects we leave on our self + other life.;

<http://dissidentvoice.org/2012/10/obama-and-romney-similar-views-on-foreignmilitary-policy/>

then we have this mode;

<http://dissidentvoice.org/2012/10/arab-jews-vs-palestinians/#comments>

+ don't forget;

<http://dissidentvoice.org/2010/08/a-terrible-disease-of-the-mind/>

before you think of what is directly effecting you, your misuse/abuse continue to read another perspective;

See this story 8.30.2012

Ex.: Land Grab compromises Food Sovereignty in Southern Africa

(Maputo, 15 August, 2012)

The on going rush to African land by national and transnational investors was a dominant theme at the People's Dialogue and Summit being held at Mumemo in Maputo.

From Mozambique to Swaziland, passing through Angola, South Africa, Malawi, Namibia and Lesotho, the voices and experiences of the people have expressed mounting concerns about the increasing enclosure of land to promote large-scale investments that seriously affect the fundamental rights of the local population and compromise efforts to achieve food sovereignty.

'Everyone knows the problem of the land. It is a complete invasion', says Renaldo Chingore, a leader of the National farmers Union in Mozambique, UNAC.

Three special commissions were organized aimed at a deeper understanding of the impacts of land grabbing, sharing personal experiences, discussing alternatives and recommending a common strategy to defend land and water as fundamentals of life.

By listening to the people, the land problem, which had already been presented as an extremely serious matter in the speeches made during the plenary sessions was characterized as a phenomenon with potential to rapidly expand all over the continent, and to impact negatively on the present and future of Africa.

In particular, common concerns were expressed about the role of the governments in utilizing laws and the smoke screen of legality to enclose thousands of hectares of land and water resources, evict entire communities, and deprive traditional property rights of any effective recognition.

This was possible because governments are taking advantage of the scarce knowledge of the law by the people, who are not informed about their rights and prevented from expressing their consent, in open violation of national and international obligations contracted by the SADC members.

Many participants reported that there were efforts from investors to obtain the consent of local leaders by making promises and ‘putting sugar in their mouths’, but there were also other several cases of **direct action by government Ministers, who are ‘treating the land as their own property’**.

‘We only know what is happening to our land when there is a conflict’, says Herbert Murombo ‘as this means it will be too late for us to intervene’.

In some circumstances, as stressed by Alice Kachere who said, ‘Fisher folk realize that they cannot access the sea or the rivers when they are faced with newly built fences’, which seriously affects the self-sustaining capacity of communities.

The delegates demanded an immediate moratorium on all large-scale agricultural investments such as the Pro-Savana project in Mozambique. This must be accompanied by precise political responses, such as the intensification and facilitation of the process of recognition of common land titles in favor of the communities;

the dissemination of information on land related laws and of people's rights in local languages; the respect of the right to free, prior and informed consent of affected communities; the direct involvement of peasants in the definition of agricultural policies based on sustainability, food sovereignty and agro_ecology; the realization of a seeds' bank to preserve biodiversity; a regional ban on GMOs and the assumption of the duty to inform consumers about their presence in the food by clear labeling, and the improved access to local infrastructure capable of stocking water and cereals for the needs of peasants and populations.

Via Campesina Africa News

La Via Campesina Via Campesina is an international movement of peasants, small- and medium-sized producers, landless, rural women, indigenous people, rural youth and agricultural workers. We are an autonomous, pluralist and multicultural movement, independent of any political, economic, or other type of affiliation. Born in 1993, La Via Campesina now gathers about 150 organizations in 70 countries in Asia, Africa, Europe, and the Americas.

begin..

please read some background with Gates Foundation idea of **Pro-Savannah Project** + others;

<http://www.gatesfoundation.org/g20/Documents/pro-savannah-case-study.pdf>

<http://www.brasil.gov.br/para/press/press-releases/june-1/brazil-to-highlight-south-south-cooperation-initiatives-at-fao-side-event/files/fact-sheet-brazilian-technical-cooperation-final.pdf/>

<http://www.trademarksa.org/news/mozambique-gives-assurances-not-only-brazilian-investors-can-benefit-land-agriculture/>

The South African Minister of Trade and Industry Rob Davies, explained that procedures are on course to develop the Southern Africa Customs Union (SACU) industry. "Developments have taken place in SACU region so what we can do is to turn SACU and regional into a regional industrial policy," he said.

He further said they intend to develop the entire African continent because it has challenges in industrialization. "Our intention is to develop industries in the continent as a whole. Looking at factors such as the industrial value, to beneficent produce before we export them, industrializing the existing products and adding value to agricultural products," he explained.

Davies said they want to create balance within the SADC region because most of South Africa's exports are from neighboring countries. "We do not seek to export maximum amounts of what we are importing from the region, but we rather want to create balance within the region," he said.

<http://www.trademarksa.org/news/bitc-signs-mou-sa-counterpart/>

It is this global controversy that we can clarify preventing people from leaving negative effects if we create this archive to be in real time with our global happenings so as locals we hold our self + others accountable locally + afar.

our combined` effects response, emailed to a few;

Thank you for sharing La Via Campesina`s article on Land grabbing from Pro-Savanah Project in Mozambique.

Folks, President Barack Obama, former President Bill Clinton, former

President Jimmy Carter, Senator Jeff Merkley, UN officials, Please rethink!

Please note i have taken off forum; project osic, to edit, which i did release in pdf unedited form at RIO 20 to many of you.

i'm addressing + sharing this info;

please note our project in the building welcomes you to use it as you share your story + build this archive to help you build your local ecological sustainable working communities, so we may all link our balanced biomes + the sharing process of how to do it most efficiently,+ harmonize with your goodness, stopping the suffering of these repeated irresponsible acts.

so locals are held accountable locally + afar by locals + the international communities to make wrongs right.

your locals can gain much by networking talking to each other + to the world. allowing others to then trigger solution, when yet uninformed locals are taken advantage of.

this is wrong + Barack I share this with you for you to see the reality of what our local citizens participate in afar as well others. + it should be stopped as locals prevent them from doing business unethically afar. as well make wrongs right!

please folks use our forum + let it trigger you to unite for numbers can better stop as the realities reach responsible people. have a spokes person update for each community + let your students take part in community building for each to become aware. make this an interchangeable role so all stay in tune. becoming a local, global + beyond participant in realities of natural building, over coming this resistance.

we want to know whom it is that is grabbing what, with contact information + detail. we see too many people get negatively effected as a few try to

stop. this is why we feel networking can sometimes better hold those responsible accountable from their local origin vs. you locals that are being abused. as well support in numbers.

but yes in our travels we saw a lot of inexperienced people as we started + still becoming aware our self, that allow these people to come in + buy their way which is wrong. for all locals need to unite + only allow people/investors to support locals to protect your commons, for the wild needs to build a healthy balance of genetic bio-diversity in order to locally self-sustain. as well all globally then come together + link these balanced ecosystems for lessening the suffering of all life on this planet.

don't get hung up or disillusioned from the false green economy, the earth will continue to do it's cycles with the universe. it is people that can better become aware of `booning with it, to fuel us vs. deplete us.

which sadly many do not understand how important it is to listen to the `ways of the good gauges as in agro_ecology proven from indigenous `ways that work. so we all can work our wild, protect the commons as locals work them sensitively + welcome investors to secure this.

please see our forum for how we welcome these new people/people leaving negative effects in a local tapering transition, so as to support them to know your real needs, let then rethink + become whole + make wrongs right. for many investors are ecologically unprepared as well You Barack now in your responsible position as well all of you, please rethink. for this is the reality that is taking place from many large alternative green economy modes/as well the world investors not informed of ecological conservation service investments + it is wrong for locals to lose control of what they should know that sustains them best.

yet we all are learning + best if we learn together.

i apologize for the madness of the US campaigns/market investors/private

investors, waste of resources all across the table from both sides. so much good reality could be taking place yet so many shallow people think it is money that fuels us.

this is so wrong + i know many of you that work the land fish our sea/waters know well. yet when they are taken away it is so hard to see our hard work/loved ones gone, suffering.

we will unite, i with my limited experiences which again recently was detained from the greed of software Microsoft, that i have to redo my work. but i also will not give up.

please link, share your thoughts + together we will build a tool to resolve + link to more;

<http://i-come-to-talk-story-net.3220728.n2.nabble.com/>

thank you all for letting this trigger what you can do ASAP comfortable + African Folks, i hope to see you in Maputo area down the road, love kara

We have policy in place, which we should not have to have full time researchers/policy interpreters to follow a negative act that has already taken place. Is this not what legislators get paid for, to enforce what policy is enacted;

Executive Order (E.O.) 12114 - Environmental Effects Abroad

On January 4, 1979, President Carter signed Executive Order 12114 (44 FR 1957 (1979)). This E.O. required that responsible officials of Federal agencies be informed of environmental considerations and take those considerations into account when making decisions on which **major Federal Actions could have environmental impacts anywhere beyond the borders of the U.S., including Antarctica.**

My personal experiences with the US judicial system is that it is not efficient + to bring justice in real time, could be delayed by several years. This is why we need

good sharp minds to put this into context now. So locals totally understand how we can have our hands on what sustains us. Many say for how long considering whom has control over our environment?

Lets take a look here for a bit of history about A wind turbine. Google and the subsidiaries of two Japanese companies are investing \$500 million in a wind farm being built in the northwestern US state of Oregon.

Read more at:

<http://phys.org/news/2011-04-google-japanese-invest-billion-farm.html#jCp/>

<http://phys.org/news/2011-04-google-japanese-invest-billion-farm.html>

We suggest our commons be supported, but **is this what you want?**
Many look at the jobs for how long?? + stop. When **we can look at the sustainability of conservation services to be tools for jobs forever.**

Consider the ecological environmental assessment for 845 megawatts of energy to power more than 235,000 homes on this one, others more. A 2 billion dollar project with co-investors, can you imagine what if, if companies have issues. i instantly refer back to our banking negative issues, still happening. we need to cooperatively figure this out as we prioritize working within enhanced natural limits, inviting environmental engineers to the local tapering transitions to help us speak on these matters. Some will + some are afraid to, as others are bought to speak for their companies values.

Not to mention supply source + open pathways for travel of these goods + now US military supporting all these countries to continue to trade as in Barack, remember how you asked India to open a Wal Mart. Which now i see after viewing part of CGI with Bill Clinton, you guys like this expansion of business.

Is this what you call economics?? Hello folks, are you remembering the war mode surrounding China from links proposing what is happening in above links.

So Washington, perhaps you?? for i refuse to say all the American people, but many (it will be interesting in these tallies as we focus direct, with **project osic** in each community globally to see how many) are pushing Wal Mart + others whom buy products from China (look folks on items you buy + see where they are from + how made, how traveled, how packaged + negative effects left, + look at local offerings + negative impact left locally). This is not fair trade. As Mitt said China is a criminal in many offenses not to mention creating so much unnatural stuff. Then to interfere + undercut local businesses.

Barack your plan is to cut 50 billion in next 10 years, from the existing 700 billion military budget. Which supposedly is personnel + outdated equipment.

See Ex:

<http://www.armscontrol.org/pressroom/Groups-Call-On-White-House-To-Update-Outdated-Nuclear-Policy/>

+ the nuclear modernization programs;

<http://www.armscontrol.org/factsheets/USNuclearModernization/>

When i say i work to end weapons from being built, what a joke many think. But if we didn't all work at this we would still be with a lot more than now. Plus all need to get real with how each of you support it. For many of us are very serious of ending it.

Barack + Mitt are similar with their military budget;

Stated in an article critical of the military and titled "A Leaner, More Efficient Empire," progressive authors Medea Benjamin and Charles Davis wrote; i take a piece from it;

Over the next 10 years, the growth in the defense budget will slow,' the president told reporters, 'but the fact of the matter is this: It will still grow.' In fact, he added with a touch of pride, it 'will still be larger than it was toward the end of the Bush administration,' totaling more than \$700 billion a year and accounting for about half of the average American's income tax. So much for the Pentagon's budget being slashed.

i repeat what above links stated if read;

<http://dissidentvoice.org/2012/10/obama-and-romney-similar-views-on-foreignmilitary-policy/>

Sept./Oct. 2012 Foreign Affairs by Andrew J. Nathan and Andrew Scobell, titled "The Sum of Beijing's Fears," paints a clear picture of American power on the coast of China:

U.S. military forces are globally deployed and technologically advanced, with massive concentrations of firepower all around the Chinese rim. The U.S. Pacific Command (PACOM) is the largest of the United States' six regional combatant commands in terms of its geographic scope and non-wartime manpower. PACOM's assets include about 325,000 military and civilian personnel, along with some 180 ships and 1,900 aircraft. To the west, PACOM gives way to the U.S. Central Command (CENTCOM), which is responsible for an area stretching from Central Asia to Egypt. Before Sept. 11, 2001, CENTCOM had no forces stationed directly on China's borders except for its training and supply missions in Pakistan. But with the beginning of the "war on terror," CENTCOM placed tens of thousands of troops in Afghanistan and gained extended access to an air base in Kyrgyzstan.

The operational capabilities of U.S. forces in the Asia-Pacific are magnified by bilateral defense treaties with Australia, Japan, New Zealand, the Philippines, and South Korea and cooperative arrangements with other partners. And to top it off, the United States possesses some 5,200 nuclear warheads deployed in an invulnerable sea, land, and air triad. Taken

together, this U.S. defense posture creates what Qian Wenrong of the Xinhua News Agency's Research Center for International Issue Studies has called a "strategic ring of encirclement".

end..

begin.. asking what is wrong with above picture that perhaps we all are supporting unknowingly as we work so hard or purchase these products these people push??

the tallies we suggest will show each community utilizing natural resources within it's enhanced limit ability or not + this is a start to have these facts known to locals. For many yet to be aware there is a natural alternative or why one should even become aware + be more efficient.

When we have control, which **Native Indians realized we are to be good stewards owning nothing**, yet when we think we own + then to have another over rule, that is not good. Or due to business downfall others take over at an unfair or perhaps reality of previous inflated price?? Can we as locals still then with these business transitions reassure that ecological priorities are included in the original MOU`s, as i ask you Barack to explain with your 90 billion support on the green economy?? if even then was correct, can continue to be correct as it co_evolves in real time with our human potential to continue to work these resources + be locally self-reliant??

Subsistence is our priority to maintain sustainability. It is nature that should control + sensitive locals, learning from indigenous/natures `way to co_evolve good science, which was it good or fragmented then? should have these rights to work these means + sustain themselves as corrections needed, ensuring that all natural life we are dependent on remains uninterrupted.

Take a look at the exploitation of cost of organic foods in this report vs. a natural grown food that we are talking about;

<http://medicalxpress.com/news/2012-09-evidence-health-benefits-foods.html/>

Now **we have a few more confused issues for students to digest** as in medical curriculum involved, considering if their doctor is not clear, alternatives to a doctor + an agricultural food farm bill of 2012, which we talk about below with Prof. Nestle as she sees it a complete mess that up until now farmers would be penalized if grew any fruits + vegetables for a balanced nutritional diet, not on commodity list.

See here for National + International awareness + how all should support our local small farmers + see here for 2012 Farm Bill updates + how you can get involved;

<http://www.nffc.net/>

The ideal of ecological assessments preventing abuse to critters in the soil + effects left as in the dead zones in the gulf from the run off of over sold Nitrogen in fertilizers to Midwest farmers in US, due to monoculture crops + depletion of surrounding indigenous filtering grasses/watershed area, now replanting, which they now recognize as they went fishing.

See now how government entities are simplifying/merging/ridding wrong doing;

<http://www.boem.gov/Environmental-Stewardship/Environmental-Assessment/Index.aspx>

<http://www.boem.gov/NOP/>

<http://ocsenergy.anl.gov/guide/index.cfm>

this list is lengthy..

it is these individual transitions you want to be part of as they are created, + directly pertain to your local ecosystems/subjects so all gain clarity as we exchange locally + afar..

Plus take into consideration the thought of investors related here with the war mode economy + negative effects as it changes. So we need to harmonize with some simple clarity, as our local communities take part, what part is for us all to decide? Whether you support another or us, **we still want you to support yourself 1st, for this is our biggest unknown as we carry misuse/abuse, leaving negative effects on our self** + others that many are over looking, as many research many other issues, **yet they all stem from this.**

If we each can gain support to go within + work on this clarity, we then will resolve.

For we are **not interested in the fear based misinformation** leaving wasteful expense of people`s energy + our natural resources, as people are injured, killed + many still now getting land/fresh water/sea grabbed as La Via Campesina reports above.

+ **Ex:** showing the importance for us to have a clear time line of local + afar policy for our in time understanding + participation as in this;

<http://www.infowars.com/cfr-strategist-praises-al-qaeda-bombings-in-syria/>

Reality can co_evolve in micro seconds depending on whom is isolating what information for what reason. For our security?? so please lets be sensitive to respect life here + see how we can be real with support efficiently, vs. running with misinformation, etc.

We suggest what project osic can do but it is up to you to welcome it into your local community + take part in building this archive together.

We can change this now as we plug into our virtual tools, reach out to all + share eye to eye, respecting those not interested in computer, for all understanding requires sensitivity + skill to not be negatively affected by misuse/abuse.

We thank many for making virtual tools a **good open source**, while many have exploited it, so please know whom has done what + what working conditions they had/have, for there is a **lot of unfair trade**. People don't realize the monopoly Bill Gates created, when yet interchangeable parts could of saved many of us thousands of dollars over the years. + still now with my experiences with Microsoft software short cutting my time on a new starter, than to see hundreds to buy another, when we found Libre Office freely.

Or even Apple Computer as it is being built in unfair working conditions afar, which is wrong, so this list can go on if we address the reality of the computer/internet world as big business has produced a lot of money for a handful of people.

For **we all have some human error being worked at**, it is in our neuro processing range to leave us go to such extremes until we learn to center + maintain discipline over our self-sensory observations vs. chase belief, so having a backup cooperative community makes life good, not to mention virtual tools to network afar. Especially when we do it together. This **makes great pen pals + new story to share as we now travel + meet new personal guides sharing what we worked at + what we find interesting to go figure.**

For **we have been so over worked as this has come down** the way it has, to do this + so much error with computer + internet, yet i'm not skilled + am constantly having to learn + then my own senile moments still get me in trouble. Like yesterday in the heavy rains i was so busy + left leaving computer to find when i came home + it had been rained on from our tiny leak in port, which I knew needed fixing, for we had a kotex + masking tape on it before, great for leaks, but had forgotten this time.

+ i usually save my days work a few times in many places, but i had failed on my thumb drive so i was freaking, forgetting it would be just another day loss. Then i put the heater on it after fragmenting, with it not working right. For this week alone 2 days of work lost with Libre but it has something to do with transferring

this document originally in Microsoft format. i cannot belief how people like to control vs. adapt. i can't tell you how maurice, my mate, has helped me with so many errors + not all mine.

For me it will be a big relief to get this finished + out. Then continue to clean up the forum with your responses. As all continue to make this a good tool.

i owe maurice for all the support he has given me + us in this. **Sharing his great community country stories of what worked with his family in Russia + now thru out our life as we helped family the best we could.** Sadly to then have it taken away as they did back then in Russia, so he had the worst of what took place + the best of what people can be in the countryside as they bartered + where self-contained + had fun! Then after years of it, a knock on door + government would give 15 mins or so to pack up + move on then to leave the farm in their control. As many kept jumping.

But **never did anyone ever leave a homeless person without food, shelter or bath,** even when at times they themselves had little or non, waiting in lines for hours to buy milk or food. They always rotated 1 time a month or so, until the person found their space + healed or found the support etc..

So **people in US, we have yet to see many of these experiences,** but yes many still have struggled + this is all equal with different subject, so all deserve respect to rid this baggage + heal, as we go beyond + enjoy, yet not to leave others afar without.

But for many your distress **is a small price to pay considering how Syrians + others are experiencing such tragedy right now, so we have much to co_evolve with now + make it good, not to mention people in our local community with needs not met, maybe your self included.**

For **now we have the tools to understand how not to fuel those leaving negative effects to gain more + do more damage.** Rather we will welcome them to our tallies into the tapering transition if we can come together in this archive, for

they are dependent on us supporting them, + once we understand alternatives they either come aboard + rethink with our support or they will be left without..

Please lets starting sharing more of these people/products.

Not to mention the scams/viruses involved + unethical practice, that everyone should be aware of.

We need good science clarity that overrides expensive alternatives. To prioritize + define our true human potential for how we collect our information inter-personally + then apply accordingly for our well being, maintaining sharp sensors, vs. dulling our sensors leaving misuse/abuse to be left as unknown;

Ex: i`m seeking a person i heard on NPR, if any one heard him + knows of their contact, that was **researching an s7 molecule that transmits our thoughts thru the air**, how about that? With this clarity of research, we can support those with sharp sensors, + better guide our human understanding of how we work most efficiently in a science language;

+ **Rid the waste of so many in distress** with psychic phenomena/nightmares/inability to sleep/awake visions/people being influenced by deceased as they feel they interact, or those experiencing war trauma/misuse/abuse, yet not understand how to process, due to simply carrying past on behavior as normal + having no support in place to understand that there is another more efficient `way, etc.. These are issues that i think all should get clear on.

i would like to release this to you folks before election to trigger your thought, as well after to work at real issues, we all need to come together on to simplify as we help whomever wins to make changes. As i feel we have great tools to makes changes now as we restore our natural potential within as well with each other. As all take part in their local community cooperatively to make a better life for all to self-develop. To enjoy this process of natural restoration as you

reflect with those simply living in harmony as they retain hands on hands with what sustains them locally.

We don't like how Mitt Romney talks about building US military strength to prevent issues, increasing budget, which supposedly he is taking about Barack's reduction to not happen which is 1 trillion. + i continue to tell Barack what he is missing as i share with others.. for we need more story adding good math.

We don't believe that is the way to go. We believe in equality + think with the many good minds now we have, our **project osic** can gather like mind. So we can reflect with them to guide as real people share local stories as we **come together with our common denominators, knowing their truth as ours.** That bring us together as we share building our local communities + linking our genetic bio-diversity, so we work with our conservation services.

As we all share self-reliance working within nature's enhanced limits.

We can understand our true communication processes as many indigenous have. + What it takes to balance our health with all the life we house + that which lives on us + around us. As we become aware of how we as a living organism equally are dependent on local + global linking of our balanced genetic bio-diversity. Realizing we can share this earth + beyond peacefully as each community restores it's natural potential supporting each to walk their own path into their opening.

We can overcome the scars on this planet as we grip + recycle this war mode economy, bring ourselves to the moment while we celebrate with music filling the air.. With this **good sense of self** understood, we can maintain balance as we rid our baggage + bring our self present to the moment;

Which allows us to maintain discipline over our self-sensory observations vs. past/present/future belief preoccupying/distracting as it can remain as resistance in our physical being.

With identifying how to respond to these early signs we can calm + co_evolve, as we stay focused in our own self-control. This makes us more sensitive to our self + inter-relate with others, so as not to interfere in their ability to self-develop.

Take a look at your students/community/yourself at what age have you become aware of this. Look at the many still unaware, that now you can make a difference as we focus direct with students as they share in an exchange.

Many say kids are lost already in computers/games/friends, etc. space cadets. i can agree that many are preoccupied in stuff that may alter their potential, but only because of what many communities allow them to do or leave with no reflection, or ask them to do what they don't like, or ask them to join in with them as an equal or not. Showing their great potential to shift + be a great community participant.

Student's value their friendship + their good ways of communicating need to be acknowledged.

If we give this challenge to them to help us resolve + make changes on all levels, including school/community maintenance, co_evolving curriculum + inter-personally self-developing as they reflect giving hands on as they work with you restoring your local community as a local prerequisite.

Student's will excel with their energy redirected as we focus direct together, as well the space cadet in all of us will dissipate as energy is redirected as we rethink.

Given incentives to explore + develop ones` continued education as they go out in the world choosing their joy of interest.

Meanwhile along their path, they build their life, as they walk it into their opening. They then aid others to do the same. + **Starting with their choice to meet their pen pal that they enjoyed** sharing this process of building project osic as together they took part building their local communities. This now **becomes a**

meaningful personal experience much better than anticipated due to how nice it is to have a personal guide sharing like mind, along the struggles of inter-personal unfolding/building a cooperative community, + being in an area you want to explore. As together you exchange what both had worked on in their local communities, as they see each other eye to eye, seeing the results.

You may say with all the belief that is + has been there are many wacky ideals out there. Yes there are, but with our experience students with their community sharing a walkabout as they share hands on with all, can efficiently prevent distress;

To our young children, our old + aid the undeveloped in all to self-develop, as **all exchange `ways that work including that for their own transition.** In the gathering/balancing of these tallies, all compare with others locally + beyond with like ecosystem/subject + better define their own inter-personal path as all co_evolve.

Good **Ex:** is the Japan incorrectness of it`s true scope of reality of it`s tsunamis nuclear accident locally, afar + the radiation fears many have now. **Sharp good minds working together can create a better means to use alternative energy as a supplement** to good local natural resources, when people lower their volt usage. Cooperatively we can stay aware as locals remain in control with better gauges for natures limitations + tools to inform the early signs of resistance.

As our global local communities communicate.

This gives us much better technology, as we continue to observe as ancients have in **Ex:** the Indian cultures with medicine/natural living, etc.. **To then sharpen sensors as we perceive early signs from the natural world as microbial/insect/mammal life perceive our earthly changes much faster than us human species..**

Why did locals not listen to the early signs of the elephants in the Indonesian tsunami when they early on went to higher grounds??

We can seasonally `boon with our biomes/wilderness as our commons, to protect as we work it, supporting us to be more ER informed when a natural disaster/earth change takes place. Leaving us better prepared vs. fear based allowing others to profit from it, as some are exploiting it. As well create better gauges for early signs to cover the globe + beyond, as well channel our wasted resources + rethink this. + Clean up what already leaves much negative effects.

People, **we cannot transcend easily once a catastrophe happens when we are dependent on material stuff,** + never even experience living with our local ecosystems, knowing each independently yet how all are interdependent.

Imagine people dependent on their medicine/equipment then to have to survive in the bush for the 1st time, not to mention without their toilet + water. Or even to take a plastic bucket with supplies carried with them for the 1st time?? This does not have to be like this, when so much natural living gives us seasonal abundance with awareness of what truly can sustain us as a seasonal camp, with supplies left in place.

It is here where supposedly poor people in the world, as i told the UN Civil Society conference, that poor is not the word, rather many locals have valuable wilderness awareness skills. + It is the level of their sensors, whether dull or sharp or how ill is the question, as we can exchange our understanding of their skills with others, defining + ending our misuse/abuse. As i stated the many US folks + many others thru out the Pacific Ocean have no clue how to be comfortable alone in the wild, since they are so dependent on materialism, + even many without it, simply drug their time away, as they are not aware of what once was.

As they await the barge to bring in rotten low variety of fresh food. Meanwhile they had ecosystems where they could even today produce plenty of food. If a stable support system was in place for many live with corrupt governments selling out their natural resources as they have no ecological assessments required in many locations.

i know how un together the PEW Foundation supporting `Our Oceans, here in Oregon, wanting marine reserves as they interfered in the local fishing grounds without working with them, without good science. So i hate to see how many locals as in Asia where negatively effected by marine reserves put in. for local sustainable commercial small fisher folks are the 1st ones to be brought to the table + the way it is here, is too many over regulating when yet only 1 layer should sit down at the table + together they should make policy in real time.

We will see if the Maguson Stevens Act upcoming comment period in response to their changes, in response to locals 1st comments, can make a difference with our help.

EX: It is a **regular seasonal event in many countries around the world to go camp as they migrate + hunt mushrooms**, etc. do you even know what natural seasonal offerings you have??do you know your different ecosystems offerings?? well read on..

project osic can share this, as you invite those with wilderness awareness to show the local `ways as local students/community support those unable + **share the natural means for all to become aware before having to experience a natural earthy change** that many see only as a crises. Which yes it definitely has been when people suffer when they are unprepared as more get injured + die.

We have **beautiful experiences from our indigenous/locals/natives/people that have become sensitive to life** that can share how they live now, maybe not locally but seek them afar + invite them or go experience them in their turf that is familiar.

You want to go beyond this + see the beautiful new life producing cycles thereafter.

Wilderness awareness offers much sensitivity as many create upon or carry forward indigenous `ways that work as we now cooperatively share our natural community for each seasonal offering. Especially when we migrate, reach out to

our neighbors, support our small farmers/fisherfolks + gain insight of our biomes that support our sustainability for us + our local communities.

In our archive to build together, **Each local/global community will work with students` tallies as you share your story, for you to gain a gauge of life normalcy** to be common sense, as you sharpen your sensors that you have allowed to become dull.

We all share this at 1 time or another in different degrees.

Which **many of us never had, due to our inability to process + reflect with what we perceived within our surroundings in appropriate timing with application.**

Leaving us with a desire **knowing there is another `way, yet never reaching it** because our surroundings/behaviors kept us chasing our self. Never calm to build one as we walked our path into our opening.. why when yet loved ones offered? Because when internally you are not in sync with yourself, we carry mixed feelings that continue to build given us an uncomfortable feeling to self-express when asked. But with community support reflection helps us synch our energy, to come back into alignment so our feeling then can be touched, clarity then can be built as we take the time to understand each other.

+ **post these feelings, awakening self + others to go within** + take a look. via shared subcategories + add what is missing, giving all of us a reality of what you/community are experiencing;

Locals want to hold self-accountable locally + afar as this fuels us each too share. As a representative we invite you to log in + post your community contact info + story of process for your restoration + specifics with ecosystem type, subject, needs + offerings.

Be clear sharing as you stop supporting misuse/abuse + welcome those into your local tapering transition showing positive `ways for alternative solutions to trigger your/others thought.

Or say you are not clear.. + open to the many good `ways to work on your self..

We want to know what development did not work, why + what alternative was replaced or if undecided. Then as you open to the world in like ecosystems/subject for feedback + looked at work efficiently completed, share what triggered you. Or maybe it was an indigenous local that shared their `way. This is what we want to build this archive.

The **ecological assessments we want to archive are of sound use for good small developments that fit into natural communities best**, not interfering in any micro or large browsers trans-boundary migration, or people, leaving no one left behind.

For we are dependent on life to do their exchange for our life + these large browsers going into fields because they are no longer able to use their old paths + competing for food is not easy to deal with. Or land mines/toxic pollution is still abundant leaving all to have to relocate, as **many people are on the run due to having local land/fresh water/sea grabbed.**

La Via Campesina can share these realities globally. As well our depleted habitats contribute to global changes etc. Each of us in different modes can share valuable insight for all. + **We thank you for this.**

project osic is interested in each experience, but we know how all this can change once you decide to do it as a cooperative community, so it is these experiences as we come together with every local community + establish our common denominator. So together we address some long over do very serious high risk issues.

+ **share the harmony many are being left without,** that young children now can take part in, as together we all walk side by side..

it makes a big difference if everyone is equally participating leaving no one left behind, play music to suit all when play music, dance, share in celebration after

a hard days work with having hands on with what sustains our local communities, sharing + welcoming in all locally + afar.

Which all of these negative experiences can be overcome as we become aware of people doing what + where. While **good communications prioritize holding locals accountable locally + afar**. As locals need to reach out with feedback to do it efficiently, as we come together here + share a way so all can go figure..

It is best when in the **plan stage, when people come in from afar, are then welcomed to participate** + share. Knowing the local needs rather having to respond after they have devastated the local lands + then left. Which is what recently happened in Honduras. Please let us know in forum when you comment, **how you establish your interchangeable roles, to contact you for local plan details**.

We want bells + whistles to go off earlier with good communication. + Have understandings established when 1 abuses. **No non local should be able to just obtain land rights to deforest without local community knowing** it's ability to coincide with the plan for all. So when people even think of offering, the locals invite them in to share what is needed, what in excess, etc.

It does make a difference if your tallies are small or big + changing negative to positive with our networking. Leaving **some of us unable to offer solution while others are much more sensitive maintaining sharp sensors perceiving/transmitting with pure intent**;

Which also can be **clarified in a good science verbiage**, to be familiar as common sense, for us all to maintain discipline of our self-sensory observations vs. lost in belief that takes us away from our own flesh or dull from feeling the earth below our feet or the energy we can conserve. As we better redirect, rid our baggage + retain the sensitivity for all life that crosses our path.

Not just think we should do for them rather know when to do what for self, others locally + beyond vs. end up in distress truly leaving negative effects on those we did not intend to hurt, because we dulled our self, etc..

Cooperatively we can ASAP do best with early signs, which is within our human control. Once we share this awareness we become more sensitive to be in tune with our self. So

We suggest **take some time for you + your class/community to make notes along the way + customize it to the best of your potential**, defining what levels of students/community members will initiate what to those less experienced, etc.

+ Once come take part with all, you will open to the synergy from all, which gives yet another perspective for all to feel + work with as all co_evolve as each community may have different tallies, so we will let students customize this charting system for each community, yet find a way to talk to each other about similarities.

Please let it trigger your thought as you fine tune your self-reliance, as you reflect. So as to offer your sensitivities of choice, not just to give to another, but fulfill yourself in the exchange;

As in **volunteer** to support this start up with project osic with your local school/community. Or train another + go after that long overdue interest + seriously gain 1st hand experience. When you volunteer you can get clear with no long term commitment. Enabling you then to move on + satisfy your desire.. You may change your position or specialize a walkabout for what you are working at within yourself.

As **you reach out**, it gives amazing clarity from the experiences as you incorporate it into cooperatively sharing this information for all to build your local working community. Settling for nothing less than harmony, without leaving any footprints or negative effects on other life.

This is **amazing how our natural purpose shows itself as we become more natural**, fueled by the universe freely, yet many unaware. So don't commit anything long term, accept for getting clear + removing your baggage.

Globally **we can simplify peace for all**, by addressing 1 common denominator we all have, which is our interdependence on our living earth, leaving no ecological category isolated. Creating good science that we can network so all co_evolves within each human potential daily, speaking the same meaning, even though in different languages..

We are in this together, sharing this earth, so **please join in partnership** with **project osic** + open your school doors into + with your community as you share this with your local school board/students/community locally + afar;

It will **be up to you to come post appropriately on our forum** as you decide to work with us as a global, local community. Let us know you are aboard or with an interchangeable role, as each get to experience networking afar, as your community representative. So each learns to do their homework, for we cannot do it for anyone.

We all gain great personal security knowing we can gain self-reliance locally, as we survive alone in our wild. **This is a journey for each as it permeates the fabric of our everyday life, well said by many.**

We **become a good steward of our planet, when conservation produces environmental services that become our tools**, as we `boon with the natural world, with common sense;

As 1 universal science is integrated, art is applied in our daily chores as we co_evolve with a shared focus to heal + develop as we understand our misuse/abuse. We then gain energy to restore our genetic bio-diversity + actually **self-satisfy as we creatively develop.**

Music is a joy as art is lived as people are freed from their own enslavement or others.

This is different than some of the now environmentalists that want to protect all life/or person building a legacy, etc., yet have no reality gauge, letting certain species get out of hand. Vs. as in the oldies that lived with balance of all species as they kept them in check. We have managed hunt now in some species yet other ones run rampant yet to be managed, why? We have the skills as hunter/gathers to maintain this balance, so please rethink with your tallies.

When i was sharing this project with a homeless person that lives close, he said you mean build community like an ashram + i said no, **this is not a secluded community isolating for religious people;**

This is about every community having the opportunity to network + restore their local community as each develop mental clarity, physical strength, simple life respect + energy efficiency that is within all to pursue as a human potential. Which leaves no footprint.

If we **take a look at whom we work for + what their footprint is**, it will better give us fuel to go on to better our choice supporting those that support community.

This homeless person is very good with real feelings sharing with people in need. Yet those that hire him are in the feel good mode thinking they doing the right thing, meanwhile they have plans to buy an 80` pleasure boat to go play, so i just found this out + will share with my homeless friend, as he thought these people where so good to him. i`m sure they are for he does good to them. But what do they do for community?? They supported a free community meal which was nice.

i just know when people lessen their footprint they have a better life.

Do you get my point, i`m just not out to attack everyone that wants toys, especially when people like Mitt Romney does what he does for his 1%. **Isn` t this a shame that good minds if they don` t leave a footprint, could organize folks to self-satisfy + free all** from misuse/abuse.. So look into this folks, see what his 1% has done ecologically in their billions of dollars of investments? I personally am still awaiting IRS to give us non-profit status after almost a year awaiting application, after several years of misinformation. Yet how do they process all that they do. Some experts say their management did it illegally, so IRS would not speak on it today (8.28.2012).

We find it easiest once each understands our human obligation to live local in balance with the natural world. Which fuels us to network what works locally + afar. As all simply do an exchange as we share some prioritized focus, for each then to individualize + define their local enhanced community potential. For many are too emotional in the ideal of preserving all life. Respectfully they can be relocated or utilized for personal use the right ` way.

Orphan Community whom i`ve just met on twitter has fueled me to respond to them + share some thoughts;

If we all take a look at our local communities, many are not so fortunate to have all simply live `boon with the natural world. **Ex:** we get old or ill or displaced + then due to budgets or family issues, many further get more displaced from their likings unless they have an abundant of funds to self-sustain. For many communities are not organized + they think they need more funds, due to their wasteful inefficiency.

Which students coming into community will show these tallies + hopefully as with our experiences they will **all continue to co_evolve, as each gain harmony thru the exchange with community;**

Gaining/developing values, developing inner tools along with `booning with your local resources that can be recycled, stopping those that should not exist, with the awareness from sharing locally + afar.

So when **Orphan Community** shared what they are doing, it triggered a bell thinking well we already want to restore existing community as we recycle efficiently + many children now with parents are not communicating with them, + do better with each other, especially if given a role as we are offering here for them to equally take part in this community restoration locally + beyond, by simply starting to live local + share as they network.

This means as **we rehab the rehabs**+ we can utilize the rooms left empty in houses, + think co_housing for orphans vs. a quick placement, when yet many families themselves are dysfunctional. So together giving hands on from students as all do a walkabout , they can coordinate like matches, as each experience these interchangeable roles, taking responsibility to **introduce their community members to the next student filling their position.**

Then better match up with the professionals also joining in for extended education, as they together walk side by side as each community member self-develops with the community aid from all.

More **like a communal family like many cultures have as many share parenting** skills. Plus this way children can enjoy their own structured place + occasionally hand over with their friends until a very clear match comes about. This is much better for all then, so many negative experiences we hear about as people themselves do it for funds or unable to cope with own issues let alone child`s.

Yet if got counseling all could work thru it. + that support can be made more readily available.

So **everything we suggest is more + more positions being filled**, whether you change yours or take on a second or third working part time or volunteering as you work out of the unwanted. Doing our homework is well worth it. + When we do it cooperatively for our community as we do it for our self, it makes it more friendly vs. struggling on own.

Whom best to do what as each co_evolve the curriculum to now be in real time with the community/individual restoration. **Leaving no one left behind.** After all this is about not being imprisoned in your own bad behavior as you think you have freedom as you live alone, or with others that are unable to communicate.

So you as well become aware of own bad behaviors or riding on others wave, etc., as cooperatively all focus on not leaving community members housed yet not successfully fulfilling their true potential. As some feel mental patients/homeless gain from a space alone. When some gain more from focused balance of daily activities structured, that they themselves had a hard time doing on own. Now they experience harmony that they also can be part of. + As the students take part with their hands on, no one is left without experiencing community responsibility as all is supported to take part.

When **people stay with family they can fall into a rut complying vs. being honest just to prevent hassles.** So when aiding another we have to read the body language as people have talked themselves into thinking that is ok, when yet physical signs shows the stress building. This is not good. + With students help all family can make changes or a move can be searched + supported.

Here we utilize the entire local community as **people are freed from one`s own enslavement/misuse/abuse** by understanding. As students within us all merge, then serious changes start appearing. Now **people self-empowering thru positive reflections gain their own fueled path to walk into their opening..** Giving them yet more clarity + strength every day, + now in this exchange all are feeling it, as all are supported to come to the cloth/table settings to orchestrate the restoration of their local community to enable all to celebrate as many do daily. As all have hands on with what sustains them, no more baggage is holding them back from being present in the moment. For now all is worked on simultaneously, as space is found to do all. + **Creative energy surfaces** giving a reflection for all to go within + rethink..

Sure this takes time + **everyone has to do their own homework** but the process sure feels good, small community gardens rise, small farmers/fisher folks are supported, small markets fill with fresh local goods, school meals are prepared from students/community as they learn as a class in each of these unfolding, as local self-reliance is built. So much around local food sovereignty gives clarity + strength. People without food now can get meals delivered or if can, go to school for meals + participate.

Fresh local food potlucks are a true gauge to show how secure a community is. + starts a flow easily when without as a starting process that works.

People do amazing things when we have balanced fresh grown local variety of food at a price we all can afford. Along with markets/foraged areas/community shared resources, etc.

Meanwhile is this not the reality when people are without, that others have abundant. Pretty sad to see how if true, Mitt Romney has an IRA at low 20 million to 100 million, can you imagine?? He is good for the 1%. But **what negative effects inter personally + ecologically, where left** in this empire building for the 1%?? Many footprints exponentially running rapid as people/life was respected, this is the question?? This should not continue, if not, let alone allow it to continue. Then have Mitt as president continuing to fail to see this footprint that is huge from his 1%, wow, we need to all do this homework + speak up if aware of these local happenings.

Barack also needs some of this awareness for ecological assessment to be completed with good science, which presently i yet to see all. Please address this if have/or aware of one with such awareness + please let me know too. For he has spent **90 billion on his green agenda.** + Everyone i experienced working on issues was rushed to get it done by him for business to generate funds, + also the governor of Oregon for Oregon issues. Same with his OFA, always asking for 3 more dollars for campaign, in generalized letters, never an answer.

It is unbelievable to see so much funding transfer hands without thought of natural limits in people's ability as well natures. Forgive me for those of you also working hard to see this happen, or it is happening in fragments, but a should be covered with good science, without these disputes. Especially when majority of people have had to make due with less budget, same us.

You see how helpful students can be to help us stay in real time with all. + go beyond these modes + simplify, so they also can pursue their life of simple living, not just cleaning up this baggage from others.

project osic triggering each of us to rethink + cooperatively act building a good working community is better than to have people with issues walking the streets, vandalizing for survival. Which i personally know here locally they continue to come, 1 after another in need of work or help + if can't find, struggle a bit/some severely before getting aboard with structured existing community help which is fragmented + some never get it. As some are very dangerous causing problems.

With our **focus directed by all, school boards/teachers/students/community look at education a bit different as you all have the opportunity to develop ideas**, which until now has been difficult due to lack of this or that. Now due to the good fortune of those in patches` with plenty due to their simple natural living, can reflect with these pockets` without, they can help fill in this missing detail. When prior you were stuck with frustration, even though many of you knew there was another `way.

At 1st this may feel shaky when there is so much distress;

But the **loving energy people have, especially once their daily discomforts are relieved, soon moves stagnant energy in all.**+ Once given respect to participate as an equal in this exchange, addressing themselves 1st. **No matter what effects left, our tapering transition gives reflection**, so they go within + see options from all sharing their perception, appreciating the input from personal experiences. To rethink + respect each to heal, come back + make wrongs right locally + afar.

Each reflect, fulfill your obligation + then with the options locally all lay out as well from their networking afar, each can gain facts to either redo another `way or co_evolve with these lessons. **Even those that were upset seeing the negative effects, now is appreciating** + is relieved of this distress perceived + can go on.

Then we have everyone as a local participant **working for all to gain insight to be a local, global + beyond responsible participant** holding our self-accountable locally + afar at the end of our focus.. Having a pen pal/networking afar sharing ideals gives a lot of support when one could not find it locally. To now fully develop + explore, some find their place in another ecosystem or go back home, etc.

Which many are jumping at the ideal for energy independence, yet the large energy developments/economy is not the `way. **Only small developments can be sensitive to fit into the enhanced potential of our natural world** with respect to the migratory paths of all species;

Micro biomes, large browsers + us as a human species, it **makes more sense to recycle what we have, restore our paths + each house can have a solar panel.** As **EX:** Leaving each to remain focused to end the war mode economy Vs. the large solar developments, which are popping up intriguing many to invest in wrongly, which goes on to this false green economy, as many profit. Taking away from local`s ability to sustain control of a good working commons. Plus these structures are costly + over time not practical with repairs vs. small projects locals easily can maintain.

Do you see how this differs, when many are experiencing unhappiness in fragments that is truly not necessary once baggage starts to rid as people better communicate + start to understand our choices. Eliminating the anxiety, addressing early signs, **gaining self-satisfaction in their learning** experience of making their own choice, as each student is required to go thru their local community in all stages.

Giving more experiences to reflect from as they then gain a pen pal + network as issues are resolved by all as transitions become clear locally as they network farther.

This way we go beyond techies running with bad science, as many have been fearful if they speak out + don't comply with corporations interested in big development with big gain. So **this gives the natural engineer in all a chance to debate this process as we seek real live communities that work, living good science daily** in all chores as common sense is real when you stay in touch with what sustains you.

Comparisons via like ecosystem/subject, as they did their local community homework. + In this process going directly to those with hands on working the elements, where all start small cooperative thinking/linking direct. While all else is recycled, as all help define their role/position, come together + rethink whom to bring in to train so locals self-sustain. So now specialties are a desire as it fuels those to further their education, reach out + explore.

Please **always be aware of the effects left on self + another life, even as in the learning process**, come back ASAP, check in with self + situation + correct when could not adjust in real time..

Environmentalists/those of you that think negative of an environmentalist, **please be aware, for the goodness being done in many communities** that many think are good, is leaving negative effects on others, many green movements are not green, they are false or soon to be very costly if they interfere in the natural world, as in micro biomes being depleted of our genetic biodiversity or large browsers being pushed off their natural path, etc. or due to locals not knowing how to maintain, bank issues, relying on maintenance, variety of things can happen when another does for another vs. cooperative local control, etc.

Many are trying to work with their industry as they work the elements, leaving missing threads. So **now is the time to come to the cloth/table eye to eye**

+ **sort this detail out** + together use the good resources from all self-satisfying. Use local + afar experiences to reflect with.

This is the **bi`joy experiences** that fuel us to live good science as we share + welcome you to join in. Even though many locals working the elements never speak science verbiage, rather just simply have no layers between them + the natural world, which is a **very good science as all threads are connected + applied..**

As good behaviors are easily picked up as people feel this real energy in motion vs. just talk about it..

It is this **simple living that natives/indigenous/locals live with, which we want to attach science words to as we reach out** in a walkabout to introduce **project osic** but not turn people off due to so much bad science now. Students can integrate missing threads or rid + replace with simple solution.

Why, because it is more efficient to act positive, then to continue to disagree over the many idea`s people live with as they follow a belief, yet misusing/abused.

This 2012 campaign election reminds me of how much work is really needed. You folks that know it well, has it always been this bad??

For this is the 1st year i've been more aware of how it has negatively effected me yet i feel very positive that even though i try + maybe our tools are not the best, but i know if we network we will figure out a `way + **truly co_evolve this waste. So are you with us??**

Do you see good science can be simple to stay with us in the moment? We are not reinventing a wheel, + we just want to address what we integrate to perform harmony throughout the day in our local living, where ever we choose to be or fortunate to be. For **many are existing without basics met + not just from their own misuse, rather people are leaving negative effects locally + from afar**+ many still unknowingly due to tangled threads many have weaved.

Come talk as you build with the world, your community + share in this archive.

A good tool to add to every one's community shared tool shed locally. (We talk about this below more.)

our combined` effect can make this project much more efficient, as we share what already good folks have worked thru.. **The world offers great wealth, from our cultural experiences gained from `boon with the natural world, as well natives that are regaining their strength** from those that limited them;

A 2010 National Geographic has a nice story of TRIBAL LANDS, which Indian tribes are now coming together as good stewards of the earth + reflecting `ways that work, as they **restore wild lands to what they once were, so as for their children to experience** what they did.

Walking side by side with our children is the best `way to restore our many possibilities now. As students do hands on exchange after community/teachers/school board focus direct, preparing 1st in classroom. So community is aware of **project osic**.

We compare old + new `ways as old + young share offerings as we bring our focus to the present in a land/freshwater flow to sea use review + **make a community `plan after a focus of hands on caring for those in need are in place**.

We want you to **gather patches` that can reflect what works to those pockets` without**. Not just locally but understand how there is no isolation of ecological categories..

What you do locally resonates globally + beyond to some life somewhere. We want all too efficiently harness the positive effects so as to channel to those of you without, in an exchange so all understand what is wrong.

Fueling all part time to then come back as we target another without + the ball keeps rolling sharing `ways that work..

See

the next` move subcategory in forum we are building, please post when feel secure within yourself to help another do the same for if ill or stressed it is easy to interfere in another`s ability to self-develop because one may care too much.

For when we stress we dull our sensors + it takes more stimulus to feel good + sometimes we don`t catch this reality + adjust soon enough. Meanwhile we over give + then get hurt when another doesn`t give back, when yet only our self can nurture our self by sharpening our dull sensors. These early signs can be learned, as many feel yet then they do not know how to apply.

We acknowledge our wrong doing + **give credit to the natives/locals that live in harmony with the natural world** + these acts are what we encourage all to learn as they `boon with their wild biomes, working with these local folks sensitive + skilled working their local seasonal offerings.

In part 2 we share more of these examples, so as not to reinvent the wheel or redo when other good researchers have already done good studies in the many bad developments gone wrong on this planet as well a few lessons from people that worked the bush well..

We want each to produce same as all come together with understandings + restore efficiency, end the struggle for land/sea/water grabbing + develop human potential, that many are fortunate to reflect. + **Do it locally, not transfer goods from afar that can be produced locally. Rather help others produce it afar.**

See **Ex:** of what is being discussed + see what your students can write as they address what your community is restoring, share your tallies + solutions as well issues that government interferes/assists with or market, so good change can be made. Share it directly addressing appropriate subject/subcategories with specific

people, as well our forum. Be clear + see whom else share this issue, so together you can **contact entity + ask them to start a dialog** about the issue with you/rep for your community + follow thru to completion or for change/rid policy.

No longer leave issues hanging, as another preoccupies. These student experiences are important, not to mention helpful. Older students can guide this fact finding as good tallies are monitored on a regular bases + followed thru, as schools merge in **project osic**.

Now younger students gain experiences as they further define their interests;

May 8, 2012

Dear Friend:

Thank you for writing. I appreciate hearing from you, and I share the vision of millions of Americans who want to take control of our Nation's Energy Future. My Administration's all-of-the-above energy strategy is about developing every source of American energy—a strategy aimed at saving families and businesses money at the pump by reducing our reliance on foreign oil, expanding oil and gas production, and positioning the United States as the global leader in clean energy.

Just like last year, gas prices are climbing across our country, and we are experiencing another painful reminder of why developing new sources of energy is so critical to our future. When gas prices go up, everyone is impacted, and Americans have to stretch their paychecks even further.

The hard truth is there are no overnight solutions to our energy challenges. The only way to deal with this problem is through a sustained, serious, all-of-the-above approach. Under my Administration, American oil production is at its highest level in 8 years, and we are now less

reliant on foreign oil than in any of the past 16 years.

We have more working oil and gas rigs than the rest of the world combined, and we have opened up millions of new acres for oil and gas exploration where appropriate and where it can be done safely. My Administration has also approved dozens of new pipelines to move oil around, including from Canada, which will help create jobs and encourage more energy production.

Thanks to our Nation's booming oil production, more efficient vehicles, and a world-class Refining sector that last year was a net exporter for the first time in 60 years.

We cut net imports by 10 percent—or a million barrels a day—in the last year alone.

My Administration will continue to look for every way we can help consumers—from relieving distribution bottlenecks to ensuring speculators do not take advantage of volatility in the oil markets. To decrease our dependence on foreign oil, we established the toughest new efficiency standards for cars and trucks in history. These fuel economy standards will double the fuel efficiency of our cars and light trucks by the middle of the next decade, which means filling up your car every two weeks instead of every week.

But as a country that has 2 percent of the world's oil reserves but consumes 20 percent of the world's oil, we cannot just drill our way to lower gas prices. The United States leads the world in natural gas production, with reserves that can last nearly 100 years—a supply that can power our cars, homes, and factories in a cleaner and cheaper way, and one that experts believe will support more than 600,000 jobs by the end of the decade.

However, we must utilize this reserve without putting the health

and safety of Americans at risk. That is why, for the first time ever, I am requiring all companies drilling for gas on public lands to disclose the chemicals they use.

Thanks in part to my Administration's investments in clean energy—the largest in American history—the United States has nearly doubled renewable energy generation from wind, solar, and geothermal sources, and thousands of Americans now have jobs as a result. By cooperating with the private sector, we have positioned our country to be the world's leading manufacturer of the high-tech batteries that will power the next generation of American cars.

I have repeatedly called on Congress to stop giving away \$4 billion a year in oil subsidies to an industry that has never been more profitable, and instead to pass clean energy tax credits to cultivate a market for innovation in clean energy technology.

And I have directed the Department of the Interior to allow the development of enough clean energy on public lands to power three million homes.

The United States military—the largest energy consumer in the world—is also doing its part, making one of the largest commitments to clean energy in history. Securing our Nation's energy future is one of the major challenges of our time, and will require the efforts of our brightest scientists and most creative companies. Americans must summon the spirit of optimism and the willingness to tackle tough problems that led previous generations to meet the challenges of their times. My Administration is making a serious, sustained commitment to tackling these problems, and I encourage you to learn more about our efforts at

www.WhiteHouse.gov/energy.

Thank you, again, for writing.

Sincerely,

Barack Obama

Subject: Response to Barack`s Responce to my Message..

Date: Wed, 09 May 2012 13:18:38 -0400

From: our combined` effect <patchespocketstalk@icometotalkstory.net>

This replaces original with typo corrections. Emailed 5.16.2012.

To: Barack Obama, Senate, Congress + House of Representatives..

Folks, please review, for you are missing my point while yet satisfying many with their points. please review this again. this is what good science changes, the difference in facts vs. other`s values of belief. we want fact to make good science. not have a corporation buy a value or a regulatory board use old fragmented science.

rather i see your desire to help people get a job + free our self of energy dependence, but are you missing the reality that we need natural healthy biome(s) TO FUEL OUR HUMAN ENERGY, to think clear + have physical strength. those with lives that consume wastefully, as in thoughts of fragmenting, a job alone, consumes as you say the 20% over our 2% fuel reserve US offers. this leaves frustrations as people misuse/abuse unknowingly being trapped. which we can unravel this web + harness this disassociated energy that causes people to consume more than natures offerings below their feet.

people cannot continue on this path without becoming aware that they are not `booning with the natural world. so if you supply here their desire of their consumption that supersedes US reserves, than they will not become sensitive to their misuse/abuse causing high rise of medical job security for others, which is crazy.

they don`t need to go over their limit, if lived + reflect with natural sustainable communities. as we will show in **project osic**, so people self-develop as they feel the energy + then understand how they are misusing, etc..

we as people can become aware of lowering our amps, becoming sensitive to all life that sustains our natural environment. which only when our communities are in balance of genetic bio-diversity, + than link globally, will it sustain us..

energy development for millions of homes is too large, it interrupts micro/large browsers trans-boundary paths. your ideals are good on a small scale,+ i understand how your neuro- processing must be overloaded, for this position you have with all this dysfunction is stroke producing. unless you really have a good team.

i already see the lines between your eyes Barack, as oriental diagnoses them as stress on your organs. + i see Michelle`s eyes in some of her photos, which I have not taken time to study you both thru out your service, but see in her eyes her need to balance herself, so she is more happy in her own skin. perhaps just been busy to take the time this requires.

Not to mention as i`ve stated before your requirement of being housed in this bubble, which you should use your executive ability to end this. Such as move into a natural environment + work more from home or take time out for your staff to be close for you to go to work + put the White House into a museum. An education center or permacultured gardens to feed the local community as we state. To give your share as a local participant, so your children feel this awareness + are equally part of their local community as those that home school do so well.

Vs. the White House consuming so many resources just to guard you folks. + do this business that still is inadequate, as ex: aiding folks with food stamps yet not having the 2012 Farm Bill in order as i share Prof. Marion Nestle`s article. These are needed positions giving support, as nutrition/exercise/interrelating, building local sustainable natural food sovereign communities is every one`s obligation. required to self-develop efficient wholeness as a human species.

please welcome our **project osic** in the building to create this focus, making good science with gauges in place as with agro_ecology. than you will see how each local communities` ecosystems will define their energy ability/living communities

where people build their lives with mental clarity + physical strength, not just consume beyond nature`s limit, but rather become sensitive to their own life +those around them + harmonize;

Sensitive to the effects left on all life. Creating within it`s enhanced potential.

Our public lands where set aside wrong, originally, in thought of protecting the wild for the people. but there is no isolation of the human species with the ecological categories. we are dependent on seasonal migration `boon with the local natural world. + must decipher the many cognitive perceptions of this. they always should of included this awareness, feeling life, knowing how we all can be a local, global + beyond participant, by living local, then networking what works.

agro_ecology can set gauges in these public lands so we work seasonally in harmony restoring more wildlife. more genetic bio-diversity, more local natural grown food + medicine.

Where our balanced environment becomes our best medicine, as we interact creating our ability to sustain from it being sustainable.

this is good science that each community can co_evolve their curriculum too. as together we restore natural living as a living organism, which your email does not acknowledge.

i could of done this easier with the WASH For Life grant, but i got denied. they just now, after 4months have told us reasons. we cannot accept them all for we have had numerous amounts of controversy with 1 telling us 1 way + another other way. As well same with our non-profit application, it has been crazy how we have had to juggle this dysfunction.

So i have requested the ability to ask questions that i was told i could in the review as well than explain intents once we get answers. Vs. them judge us on incompleteness. i do agree i am inadequate with computer tech + writing with

good English grammar, but i feel we are addressing serious issues + have experiences for good solutions to be focused, so all can participate. We have had many scams, viruses, + computer breakdowns/repairs, new ones, etc. so we just continue to respect the virtual tool. But by no means do we suggest computers for all to be dependent on.

There is no way i can see the US making good international communications when US does not have own affairs in order with US people being so unaware of their own solutions to end misuse/abuse.. leaving so many in ill, diseased states in need of daily support. Which is what **project osic** also will do with hands on by students in a walkabout with their local community + network locally + afar.

we need to hold our self-responsible for this devastation in these poor countries, + in our local communities with people left behind, due to people fragmenting due to these large developments out of hand, where developers are land/sea/freshwater grabbing, leaving negative effects on locals everywhere.

as well the global market place, due to no good science controls integrating people with their natural world, for these individual local ecological assessments to be included in their `plans as they restore land/freshwater flow to sea use review.. that right now offer many position`s to do it right.

+ i don`t mean the incorrect ones from the environmentalists now, many are wrong also, with fragmented science. rather we need a healthy perspective from a balanced environment from old + young correcting some understandings as the old have lived with balance. plus the indigenous still are if lucky to not have lands grabbed or sea or fresh water. + we can show you results of this globally + locally. look at La Via Campesina.

we can restore our natural world to give us an abundant of conservation services, where nature supports nature, which includes us as a living organism.

we welcome **project osic** to all local communities, to aid the restoration of all

communities. it would be really good if you admit how wrong large development is as tally`s show good science results. + show how a tapering transition can make good changes, to build good lives not just jobs where people are over consuming, but jobs that are full careers of people`s choices as they self-develop + self-satisfy without leaving a footprint.

creating/exploring the goodness of the earth + beyond. cleaning up our mess. + see how only small unique development fits into the natural community, enhancing within natures limits producing more environmental services that truly are a bi`joy experience, mind boggling as we co_evolve with them.

Without this reflection of nature`s sensitivity, humans never would of progressed as we have. Chinese medicine is a good example of several thousand years of studying other species acts + behaviors with other plants + animals.

+ see the bigger picture of how this is what will co_evolve the human species.

without it we will remain more diseased + in a war mode economy, as unclear people control + interfere, leaving majority of public confused unable alone to stop their misuse/abuse. Meanwhile our service people get trapped, injured, disfigured, killed.

Than come home with difficulty to adjust.

large development is interfering in this genetic bio-diversity balance, badly needed in every community right now. plus it takes peoples responsibility to develop themselves away, as people afar do the work locals should do, in many cases.

we can balance wilderness to build species to balance bad pathogens, aid toxic air as people stop misuse. not to mention the large forest companies spraying toxic chemicals now as in Oregon, leaving deadly effects on microbial life in soil, plus ill effects on human life.

Which in some cases people are not even informed? Same with the reality of the nuclear radiation traveling thru out the world from Japans recent disaster..

if you add our equation from each community result from students with good science, you will see the difference + prevent more loss of a variety of species. not to mention people will become aware to stop misuse/abuse + use these tools + harmonize.

you people have great resources yet bad science is fragmented, when if you support us to build efficiently **project osic** locally + globally, than now facts will show itself + good development will follow from the tapering transition we suggest.

not to mention the movement globally that is living this soundness in patches` which we will link with, giving pockets` without, reflection to go rethink.

thank you for reconsidering how you can help us develop faster. i look forward to getting your detailed thought. not to mention the ecological assessment required before these

large developments start, showing small is more efficient in a variety of `ways. This should go along with your MOU form. which i think you will see once done correctly with good science, for many already need to be changed, as they are interfering negatively.

sincerely,
our combined` effect..

end..

begin.. one has a very difficult time taking part in this government in US, the letter above is a good example, after all i ask + then 6 months later I get another email duplicating this one.

Barack Obama cannot do this alone, no human can. He needs to hear from all community representatives as we make changes. For many don`t have the means

to continue when yet no response directly related. Please hold him in his responsible position accountable. As well those in Congress that resist, etc. as we co_evolve these roles to work within a healthy neuro processing for all. For students working with him could of given me a better recent update to my questions, then sending the same response 6 months later.

For those of you that don't keep up on the US White House updates on their website, i'd like to share these **Fellowship programs** below, in the building, starting 5.23.2012, looking for 15 people to go to Washington, while others as i have done, can communicate from afar..

i do believe it may not seem as though government listens as we try to hold them accountable, **i as well don't like the communication process.** But many work really hard at it as we inch along. So what do you think you can do or your local community with these projects. + Seriously work cooperatively with your community for self-reliance as you see how best to interact with tools that can be made here. Again focus direct your local students. As well suggest the reality of others that should be prioritized over these.

Same with any entity we or another may suggest, **hold your ground + see how it can be bettered or share what you are already do_in.**

If you/students can participate in personal/community issues, you/they will be better at helping others locally + afar, once you exchange some detail. + in every situation work what you have as far as what you are in need of + reach out + communicate what others are doing. + Come + post to trigger this thought.

This program below offers for you to receive updates once subscribe;

Wanted: A Few Good Women and Men to Serve as Presidential Innovation Fellows

Todd Park

May 23, 2012

10:11 AM EDT

Share This Post

Today, we are very excited to be launching the new **Presidential Innovation Fellows program**. This new initiative will bring top innovators from outside government for focused “tours of duty” with our best federal innovators on game-changing projects. Combining the know-how of citizen change agents and government change agents in small, agile teams that move at high speed, these projects aim to deliver significant results within six months.

We are kicking off the program with five projects that seek to save taxpayers money, fuel job creation, and improve the return government in delivering to the American people:

- **The Open Data Initiatives Program**: This program aims to stimulate a rising tide of entrepreneurship that uses data from governmental and non-governmental sources to create tools that can help Americans better navigate their world, such as by finding the right health care provider, identifying the college that provides the best value for their money, saving money on electricity bills through smarter energy shopping, keeping their families safe by knowing which products have been recalled, and much more. Building upon prior success stories in which entrepreneurial innovators built amazing products based on the release of weather, GPS, and health-related data, this program will speed and expand the release of government data and voluntarily-contributed private-sector data in machine-readable form in realms including health, education, energy, safety, the nonprofit sector, and personal finance. Through ideation workshops, codeathons, and “datapaloozas” that showcase the best innovations, the program will actively stimulate the creation of new apps and services by creative

entrepreneurs— improving the lives of Americans in many tangible ways and creating jobs of the future at the same time.

- **Blue Button for America:** This initiative will seek to expand nationwide adoption of Blue Button, a capability that enables consumers to securely download electronic copies of their own health information. It will create tools that make adoption and operation of Blue Button even easier by public-sector and private-sector organizations, and also stimulate the development of new apps and services by entrepreneurs that can help consumers use Blue Button data to improve their health and care.
- **MyGov:** This project will reimagine the relationship between the Federal Government and citizens by rapidly prototyping a streamlined, intuitive online system that Americans can use to easily access the right information and services for them from across the U.S. Government and also provide feedback about their interactive experience.
- **RFP-EZ:** This project will develop a process and a platform that makes it easier for the Federal Government to procure innovative technology solutions from small, high-growth companies. This will enable more startups to access the government marketplace, fueling job growth, and will also result in the adoption of lower-cost, higher-impact IT solutions by agencies, saving taxpayers money and improving results delivered.
- **The 20% Campaign:** This USAID-led initiative seeks to create a system that enables US Government programs to seamlessly move away from making cash payments to support foreign policy, development assistance, government operations, or commercial activities and transition to using electronic payment mechanisms such as mobile devices, smart cards, and other methods. Moving from cash to electronic payment promises to reduce waste and administrative costs while simultaneously improving outcomes significantly.
- We're looking for about 15 amazing innovators who are interested in coming to Washington, DC, for 6- to 12-month Fellowships, beginning in July, to work on these projects. We'd also like to connect with folks who may not be able to come to DC to be a Fellow, but who are interested in following the progress of these five projects and participating in them in some way – for example, entrepreneurs who

are interested in learning more about government data resources that are becoming available and developing innovative products that make use of these data.

You can express interest in being a Fellow or in following and participating in one of the five projects in another capacity at

www.whitehouse.gov/innovationfellows/

This is a terrific opportunity to sign up to create, and drive change for your country! If you are an accomplished innovator and if one of these five projects gets you fired up, we encourage you to throw your hat into the ring to join the team!

end Todd`s..

begin kara as fellow participant from afar..

i share my comment (made spelling changes here) + ideas with you that i posted 9.22.2012 in response to another idea of government becoming community;

i need to get an understanding as a new comber?

is **MyGov** going to be **Data.Gov** when finished? or is this a separate entity or will changes/clarity here be applied to several present/new entities?

+ will the government accept being guided by the people once organized as in the following below?

for if i can share your support in this, right now others knowing that this can co_evolve will perhaps calm the ones that are presently very frustrated feeling much waste is going in wrong directions leaving community unattended as people are left behind with no medical insurance or dental, unable to afford proper

community support for their interpersonal growth. + to find a job when people are ill + stressed by so much dysfunction of over regulation that is fragmented leave much misuse/abuse.

where we feel **project osic** if made aware thru the students for each local community as we suggest below, then people will have the hands on support while understanding these tools for their self-empowerment.

+ those that see their positions would be rid/modified no longer will just hang on to their programming or greed as many have. for now the world economy will reflect these modes + the market will regain the fuel from ethics restored + the ecological limits will be a good gauge so people feel life energy along with good tools, all take part in making/sharing.

so i ask is this appropriate to ask these questions here? or where best? as well share my idea below?

i hope people can call in + get same results as on computer, will their be parallel understanding in real time with **MyGov**? is this the name it will stay?

ex: hold ways vs new listed as **MyGov**? so people know it has been updated, vs. thinking they do + then will do again or maybe some where else their is a better way, or would they just go to **MyGov** 1st if aware? would their be both modes at same time?

right now is **MyGov** only a computer project or can people participate in another offering? i suggest you make it that way if not.

for many good minds have no interest in computer. + yes i agree all students should learn + than as adult have a choice so all information stays humane by what ever is done on computer will have same in eye to eye ability, even if another assists.

people are feeling like they need support but are not aware of what is offered. can

i suggest ideal here?

in our **project osic** i`m reediting to release, i know how hard to stay in the present when do_in virtual world vs. eye to eye, but we figured a `way.

we think we will email to schools this pdf as a trigger for thought to get this out faster. so students do a program in class to meet their community safely, as they introduce project osic;

do a hands on exchange as they create tallies as we focus direct, prioritizing whom needs what + connecting them to rehabs in need. prioritizing those without daily needs left between the cracks.

tallies will show who, what + where + why resisting, defining whom best to guide even in elections as hopefully the campaign/lobby modes will co_evolve to not exist.

look at all the resources wasted yet many people around the world are suffering/dying prematurely + if our thinking gets redirected we will see an abundance of fuel to resolve these issues for all, + even those beyond repair will be more comfortably cared for, as we suggest eastern skills, as western curriculum should open to the worlds ability to be simple + work within natural boundaries, that good science from this will be carried daily as good tools for us to co_evolve + to heal + maintain harmony + create. so all people can share + explore earth, not just some.

right here in this mode they could connect with **MyGov** for offerings, so they understand + those entities could reach out in a more friendly way or continue to work thru students as helpers. as each ecosystem/subject becomes a category that is no longer isolated.

for we have no ecological isolation, only in our cognitive perception + that we must change for it is not the truth of how humans work most efficiently.

we are living organism dependent on our natural wild biomes of genetic biodiversity to link globally for our human sustainability.

research can define this easily.

this gives students interpersonal reflection to define self/career/studies by hands on reflection.

ok now that all is matched with a rehab/or restore/or build new rehab connections, again students best to define community to fill positions, that does not require a lot of skills, rather simple respect for life, volunteer, get clear then go figure them self, but the transition can be more friendly to start if hands on, etc..

so now again **MyGov** is modifying perhaps for those that have been unable vs. those able?? + those able need **MyGov** for what?? lets continue lease.

ok now once these modes in place, more positions filled, more people healing, modifying behavior (many scare from earthly aggression)/stopping misuse/abuse as they self-develop independence with support systems in place/or aware on own.

good this brings all to the cloth/table for cooperative community building. seeing government as a tool or rid dysfunction vs pay for waste.

what about legislators that should be aware of local community as a participant + are not. + they cannot resolve local issues like many now. they them self say they cannot resolve with congress. this is not good.

do you see the layers we have? these legislators need to rid this baggage + come to present so when a local asks or many locals on same issue then issue gets resolved, vs. bipartisan stand still, etc. or not enough votes to win in congress. leaving people without as many now.

+ leaving many people feel right now they need to have a national peaceful

protest for any positive changes to be made, this is not as efficient as what we can do.

if students can connect them with means in government for self-reliance + not be trapped in the other mode of having a legislator attempt to resolve, with their layers? this is less efficient.

legislators are needed for their verbiage to be changed, to define a means to end parties + responsibly support locals as they become a local participant. or no longer offer a trapped situation. + involvements to mislead, that keep them unable to reach locals to aid solutions this way.

vs. locals connect with students to utilize resources, + not await, which is more efficient for all.

so now government may do more for their own rid of waste, plus establish new offerings for rehabs for healing support. as sensitive define + differentiate self healing from self training, etc.

now able people see clarity of these local positions opening within them self + for others as their community co_evolves. + people start to feel like government is needed to do above for a starter.

now with more transparency, more live energy evolving being felt, still a need for students to redirect their focus to sharpen their minds, to work with community members as a greater classroom then what is offered now. to see our realities of fragments + make connections as a good science does. no more bad fragmented science, rather change curriculum to change community + co_evolve together.

now community becomes self-reliant. but everyone knows ER issues happen, so they feel secure that gov is their for when unable or the tapering transitions to get back to independence or with support in place.

do legislators in place now want to continue to work for unable? or think they

should continue until their chaos is rid/clear/or interchangeable roles take place now + they transfer this simplicity/complexity, depending how each is programmed?

wow this in itself is great. imagine the changes in all aspects of people/community/government to catch up to here.

ok now the students tallies focus on prioritizing a `plan/land fresh water flow to sea + ecologically restore communities ecosystems potential's within nature`s enhanced limits. this is a lot of interpersonal co_evolving to understand this far, as well positions to do this.

so all fueled to pitch in + work into full careers locally + then explore afar, as local prerequisites are completed.

as well skilled professionals come into community + also do a walkabout with students reflecting on their patients/clients seeing their affect left, making changes. as all participate in corrections.

policy will change as people see errors, self reflect + hold self + others accountable. more people will heal + not be left behind.

ok now more harmony accept as a human family sharing earth + beyond as all responsibly live local + share what works, as all become local, global + beyond participants that harmonize.

ok now the war mode economy along with the false green developments both will show up in transparency + in tallies as not being efficient + local tapering transitions now knowing they can ecologically be restored can now stop the production of products that leave these negative affects afar, such as all weapons accept for personal hunt for food/clothing/shelter.

students within all now come alive + awaken to understanding the worn torn threads being replaced with efficiency as all learn early signs maintaining sharp

sensors as people understand how to maintain self sensory observation vs. belief.

as those dull now have support to sharpen. as the human spirit is freed from misuse/abuse more people want to be self-reliant + explore farther as sharp sensors perceive farther.

so now young + old can rid the mixed signals now many have from weapons effects left/aggressive acts, as people live local + share what works. in our **archive of project osic**, as well this process + many others, sharing the hurdles along the way, strategies + actual schematics via like ecosystem/subjects to trigger thought to bring home + make it work, as detail is logged in by a representative, etc..

+ this is our plan in **project osic**;

so we welcome all to share idea + i've seen government have data banks as tools, but never do i see support mechanism in place to see each layer of dysfunction + to have means to resolve accept for blind/physical disabilities etc. not covering the extent as i speak of people being lost in layers.

set me straight if this info should go elsewhere + i will follow up. for we have solutions, if you don't get lost in this present mouse maze that exists as many have.

it will be a bit for me to clean up my few hundred pages of sharing local + afar story from many, so we don't have to reinvent the wheel. but exponentially we do + can reach out to resolve so we stop suffering + enjoy how beautiful our natural world is. + what a joy when we understand our inner tools + use them correctly.

thank you + project osic has many ideas so please watch for it + our forum to set the path, as this archive builds.

it is nice to make good science from the many fragmented ways we have now + integrate so people can feel life energy as each engage with the natural world. for

the whole objective shared by us all is to go eye to eye, not stay in the computer mode, yet respect good tools + make them more friendly + open source, so simple is good.

thanks you for allowing me to share + please set me straight, for to make this easy for all we need to make story that applies real issues + resolves so people understand what people can do together.

so government becomes a friendly word. + people realize we all should know this interchangeable role + no one should be in any position so long that they them self fail their local, global + beyond responsible obligations.

i suggest as students collect + prioritize our focus direction together reducing tallies, they than aid those in congress as local participants to be;

for now they are unable to see all this as they perhaps could with their local tapering transition. giving them support to remove them self, or role or title or change policy + co_evolve with the reality of the local community being in control of itself as it directs the legislator, that becomes more of an interchangeable role.

so now old out dated does not take years, rather microseconds of processing to bring all to the local cloth/table for real time discussion + all co_evolve together.

thank you + good night! kara

end..

begin.. by triggering your thought for what you can do now for you + your community + always apply + have a student come back + post as you share..

This gives you a sense of where Barack Obama wants to go. Does it make sense to you? How can you/your community interrelate, as we each co_evolve into our/communities potential, utilizing efficiently all resources?? Address personal experiences that have been negative or a good idea you came up with, or

go eye to eye with your cooperative + define together, with shared issues. Now is the time to simplify.

We feel these above programs should be defined by you/community whether to efficiently expand on/define/delete/incorporate. If each community prioritizes to rid their needs + share their offerings as you restore your potential, you will awaken to some very efficient processes that many are doing in patches. Experiment thru **project osic** + start a dialect, if it can be helpful to you. It is important to stay in touch with our local government + make it work or rid the policy/position that is dysfunctional.

This `way we can clear space to get to some big issues now. Such as Barack says he is not going to bail out the bankers next time, Mitt says he will. Folks we all should follow closely Iceland, for they have put 78 as of 8.29.2012, bankers in jail + have hired a bounty hunter to continue to find the rest. As they have nationalized the banking industry so as to give back to the people + they have told IMF that they come 1st. this is unique + now Irish republic + Russia are following.

The market is showing some concern as people are taking their funds + not trusting others to invest as in their 401K.

It is **actually funny how all these years government has handled people`s savings** + they have organized to maintain our communities structure. Can you imagine if we get it right + come together as a team, where natural communities are made + the war mode economy is stopped.

War is a crime against humanity + it is up to each of us to not settle for it. Our neuro processing does take time for change, but amazing things can happen in micro seconds, right now as we open to the students + focus direct together your communities potential..

Most important is to see these legislators that you vote in, to be responsible local participants alongside us in their local community, interacting with students with **project osic** tallies as they work with you defining how best to simplify.

Define how + if you/community truly need government + be clear as you compare with other communities, then communicate most efficiently. Or if define a way that can replace something that is energy inefficient then suggest.

Vs. just in charge of our own life becoming shortsightedly aware thinking we are self-reliant. Which can easily take us on parallel short paths. As we allow waste to continue to eventually interfere in our path.

When we make local community + **responsibly interrelate**, then no one wastes resources. Yet each self-satisfies in the integration of our careers as we all rid waste + incorporate harmony with efficiency. This is when we then go on to the war mode economy + get real with how locally you/your community support it. + Start threading the connections that many have simply not been aware of. Now we can also stop the land/sea/freshwater grabbing as the world talks to each other + we hold our locals accountable locally + afar.

It has been easy in the past for many to abuse then run to another country where they are not regulated or organized to catch them easily, or to sell products as some run from FDA in US then to sell it elsewhere. As well the unfair trade building our products. This is time for all this to stop if we talk to each other.

This is true democracy at work, if we follow thru, apply + network..

Imagine clarity of **No more funds taken for war from anyone**, even government. Or no one makes funds off of war that will end it real quick. Then we have more resources to share goodness! Can you imagine what US would do with 60 billion dollars a year more if no nuclear weapons, + how much of the 700 billion per year in military to be tapered off. Not to mention all of you others in the world with your budgets, that is unheard of with all this paranoia.

No person that fights a war starts a war..

How about holding the person(s) accountable that wants to go to war. Not just harass or be disrespectful. We can get very detailed as students single this out + together use our power as we address early signs + break up the energy as it starts to build. Tallies will show these local threads of real people + how programmed they are + how we can build alternatives, for their security or for employment as we replace this old programmed thought + bring all to moment as we live local + build local tools to help us locally harmonize.

Once no good sense is happening **we can stop it before it builds to the disassociated energy that ends up producing the actual war events.** We have too many good folks in communities dealing with conflict as they intermediate understandings for each to get clear + resolve peacefully.

We can harness this + grip it early on.

It is always someone else that doesn't go to war that is pulling the strings to make war happen. For we have many issues needing attention + our objective is to set a precedence so efficiency simplifies common sense into 1 good science the world + beyond can share.

+ **Sadly we can't just address natural living, when we have an over abundance of dysfunction** in every community with threads worn, torn + intertwined with the government. When yet governments are not including this detail in their decisions always, as people get fragmented understandings. Well now we can with our students help.

Will they use our tallies? Yes if we all come together as a human family sharing this earth, considering those of us that care outnumber those that profit off us. They will have to listen if our tallies are of 1 good universal science, for this synergy will fuel us solutions.

i yet to read all the democide story of link above, so it will be interesting to see how many others had /have this idea for peace. Reasons of why so many people

killed. Many of you may be much more informed here than i, so help out here please.

Never have we had an ability as now to work together with our government, even though it is time delayed, how much no one truly knows the layers in between us, i don't think, how about you? As well the ease of working with each other with our virtual tools, even though we yet here to focus + market this amongst good people, so we ask all to help us share this locally + beyond.

Sure people had great amounts of underground happenings taking place. But for us all as the international community doing this, i think we can be efficient + sort this out. For we are talking large numbers if natural community's join heads + simply agree to say no + not accept anything less than good communications.

Our combined` effects idea is to start with local food sovereignty tallies, as we all restore local commons to be worked + controlled by locals for locals. To supply surrounding neighbors. The local `plan restoration will fuel us thru this process most efficiently to focus direct students for a real objective that each can experience. So please take a review of what locally is a priority to many now. How much is depleted/restricted, due to no easy access to natural sustainable food/fish/freshwater/good soil? How much is abundant, how far away, for these are the links to start with as we support them to reach out farther.

As we stop the idea of transporting food across the planet.

see **Professor Marion Nestle`**s 2012 US Farm Bill review link as she + her students have a hard time deciphering as well legislators for it is so outdated + to imaging how farmers get penalized for growing a balanced nutritious diversity of anything beyond commodities is prehistoric;

<http://i-come-to-talk-story.3220728.n2.nabble.com/can-t-think-of-a-better-way-than-to-sit-down-to-a-potluck-in-the-wild-with-local-grown-natural-foods-td7557157.html/>

see **Shiva Vandanya**'s Diary Blog, as she has great detail of Monsanto + the many experiences from her natives committing suicide as they are unable to self-sustain or use own seeds, etc.;

<http://www.navdanya.org/blog?p=636>

As of 10.2012 France, Russia + Now Germany have stopped using their products. + Russia is doing a study with 12 mice from same mother, separated in ½ with 6 being fed with Monsanto's GMO's + the other 6 without, to see how long before they get cancers.

Have students network online + apply locally, as they reflect with different insights of different story to conclude their own reasoning with good choices that are integrated locally, so your community is clear on these issues. As tallies show actual folks investing in this vs. those ill from it. + What people are doing to remove monoculture crops + Gmo's from their communities, as they work to save + exchange their own seeds..

See **Occupy Monsanto** + many more as uprising protestors come out in the streets. When yet we tell them to focus + not waste energy being negative, rather lets organize. Yet so many resources/energy is being wasted when **we can make good science that includes the ecological assessments as a known**. Where values backed by facts cannot be bought or rewarded to be accepted when it leaves negative impact..

Same with **globalNoise** on October 13, 2012 with Occupy Wallstreet structuring support for people to utilize resources to bring up your own local issues, as other's are misusing/abusing. To define how best to bring people together to resolve + creatively work for solution in a constructive process, as students network via like ecosystem/subject, whether local or afar.

+ **Bring alternative thought to the cloth/table platform** to trigger thought. Which we suggested welcoming those that leave negative effects to your local tapering transition as you follow thru with a `plan, knowing what limits to work within, as facts are laid out.

Please, take a look at your youth now, are they being productive as a local/global participant? So yes every organization has negative acts from irresponsible people. But the goodness here is truly appreciated for many of the skills these folks have completed in their coordinated effort for all locals to simply live + network solutions.

Preventing a lot of the negative issues that are real issues these folks are addressing, that are in need of addressing, in every local community;

Leaving no one confused by all the information + layers of misunderstanding that are out here, along with manipulation + fraud, so each **gain insight. Using virtual tools we can stay focused eye to eye with local + afar community that gives solutions to apply locally.**

+ Respond to early signs of negativity + follow thru to **welcome all into the local tapering transition** which we continue to explain thru out this document. Set up classroom debates then add community/networking to see the range of thought that needs further clarification. + Apply the local issues with it as all apply to resolve. WHICH GIVES A GREAT SENSE OF WELL BEING.. Not to mention students can always have a mode ready for good investors as they support locals to control the commons + protect them as they work them.

Leaving no more loose ends for another to ride on + take advantage. Review the **priority performance do_in** on forum if stumped + create a mime, motion performance to **truly awaken the sensors** to what can be + rethink, **even take a break + celebrate along the `way** + be fortunate for our many abilities now, recharge as you reflect in harmony, let music fill the air as smells of a fresh local potluck is enjoyed. Be sure to advertise your local events on your message board/post on forum here, so others afar passing in can take part;

<http://i-come-to-talk-story.3220728.n2.nabble.com/a-pri-performance-do-in-when-all-else-fails-go-to-mime-music-motion-f3732946.html/>

Than continue on to comeback to work being able to handle + sort thru efficiently, thru all of this material;

We have a world of negative effects left from monocultures + their toxic practices destroying life in the soil + leaving negative effects with run off as **Ex:** from Midwest farmers creating dead zones in the gulf, which we discuss later more. Yet we have people like Bill Gates/+ Foundation (not sure which one), that bought a large amount of shares in Monsanto + feel their values are real + this is how we feed the world. Then he tells investors that vaccines are profitable. Yes they can prevent more disease, but what about building community to restore/maintain their ill effects? As in what we discuss in **projectosic??**

People are whip lashed with fragmented bad science. + Many feel science is just another religion.

Which we disagree;

For simple common sense that people living natural lives, experience daily, is a vast variety of integrated science. That many carry forward from indigenous `ways + skilled people that have gained sensitivities from these sciences integrated, which some as in Masanobu Fukuoka did very well + Miguel Altieri continues to do + many other in permaculture, agro-forestry, etc...

Self -sustaining locals `boon with nature, with simple respect for all life. In return obtaining mental clarity + physical strength to maintain sharp sensors, as **life is simplified**. This always brings us to the present as we tune into our sensors knowing what we feel + then make responsible choice;

These behaviors shared with our grandparents/parents + now young are **fortunate experiences, to have more sensitivity** in all perspectives as we co_evolve. Vs. the mode many have where another does for an able person, etc. As we interfere in their sense of themselves to be developed without realizing. Yet to be aware that the misuse/abuse is contributed from taking these ways passed down from many generations before us, in their attempt to survive. Yet many took

it as normal behavior, which it is not.+ By **reflecting with so many aware people we are fortunate to have, we easily feel the energy to then self-adjust.**

We don't have to feed the world. We just **have to stop interfering so all local communities can network + exchange what it takes to sustain within their natural enhanced potential** as in using agro_ecology gauges that work well. To gain local economic + social self-reliance, vs. be aid dependent on outsiders across the world at a costly footprint.

Please review/use + help us build this archive as a tool for **project osic** by posting to trigger solution for you/community + others to do the same. Then check back into forum for updates/strategies, incomplete thoughts for others to trigger solution, schematics of what works + find your ecosystems + like subject + have students go figure + don't forget to explore new ones + come post in appropriate subcatagorie after 1st time reviewing all in sequence, + help us build this archive;

<http://i-come-to-talk-story-net.3220728.n2.nabble.com/>

i come to talk story

is a **virtual tool** to globally share, locally + afar.. Subcategories to build as all share offerings/rid needs in the process of building ecological sustainable working communities that harmonize with;

patches` virtual message board to link us eye-to-eye..

As ideals are posted, we reduce more words + develop better acts. See how you can bring them home for you, + your community. Let it fuel your cooperative part time sharing locally + afar.

Please come together in this exchange, define how best you want to interrelate. We are not settling for anything less than peace within us all. With this we end the war mode economy, which will end war, as we regain our self-power to take care of issues at hand.

We can **go beyond, Imagine**(as sounds of John Lennon fill our ears)

No more do we have to accept fragmentation/manipulation, failing to see the negative effects due to fine threads of worn/torn communications..

Peace is an option now if we share together in each step along this ` way that works 1st time around to make sure we get it. + As we are near, holler for some of this takes local support + even from afar, sharing is good to help us get thru some of these transitions. Not to mention our focus on some of these issues takes a steady calm focus from all of us.

Thank you! So don't give up please take a break, experience this, plug in your life/your community + share with loved ones + then come back to us + have 1 from community post. Or post for self.

Thank you for welcoming us to share this project with you. For us to fund raise in a variety of modes, we still await the US non-profit to confirm our 501.c3 status, which as of 7.2012 my agent passed file on to supervisor with his approval, so we waiting + either ` way we will continue supporting the continuance of this project, with options in these few ` ways;

Addressing your loose issues that are resisting, or welcoming you to bring aboard your positive offerings, as we share solutions for the many pockets` without, sharing patches` of soundness. Please rethink now, + share with yourself + your family/friends/neighbors in a walkabout within your local community, so as to understand + create together so all on same page. + Start with an issue you have yet to figure out. + Post for feedback if stumped or share when have solution.

We think funneling all thru **this mode with project osic will awaken the student within all to help out.**

This virtual tool brings you eye-to-eye with your local community, as you assist in this exchange + add threads of detail others are forgetting. **Nabble** offers as well for you to use the tool freely. (if don't want advertising then you can pay to eliminate it, we yet to do that here, so please note none of the advertising is ours)

As you see fit, you can make your own/community forum. But don't forget to add to our archive so we don't lose perspective of this focus. Which will continue to be a tool for yours.

Our goal is to **work thru the difficult process of not knowing by sharing reality of stage in, for others to trigger your thought for you to do your homework/add strategies/schematics that encumber sound thought** for local + afar sustainability to sustain each of us in self-development.

Share good innovation to `boon with it + become good science engineers, as easy as making a good recipe that tastes good, so don't fear it. Welcome this experience + share what stumps you along the `way to open for others feedback that share like ecosystem/subject that have been there done that;

Yet explore, sharing story of **ethnic ecology with amazing conservation tools**, as in the many cultural exchanges as indigenous interrelate as good stewards. Rewarded from the environmental services gained.

Define where your locals live with good science + integrate + define the bad + address it.

Lets` explain this in a little more common sense..

We feel local people should **truly enjoy living locally** without any separation with the natural world. Why? Because when we are allowed to only look or walk with others` limitations, without becoming aware our self on how to be sensitive to understand,

how we lose our human insight potential;

Propagation/touching/smelling/tasting/reproducing/managing/exchanging/plant pathology/histology, it`s effect on life around it, that which feeds from it, etc. with each particular species by using it, as our sensors/receptors log into our processing as we co_evolve with this experience for we/the life we house, are as

well a living organism dependent on this balance of genetic bio-diversity daily to sustain from.

Without it, prevents us from an energy exchange completely `boon with the natural world that fuels/feeds our healthy balance of microbes to sustain us/our cellular growth + repair, etc. Without them other microbes leaving toxic effects would rule, leaving many in ill, premature dying states as many now are experiencing.

Which we ask you to share these tallies that project osic will focus direct with locals as students do their homework as they reach out in a walkabout.

We don't expect anyone to go cold turkey unless very clear of negative effects left. Rather remain calm + try to gain understanding along the `way + our human nature has incredible tools to change in microseconds once we understand + instantly can redirect.

Which gives us the ability to self-reflect, not be influenced or over powered as when we multitask, fragmenting with business, due to not completing our homework or from the many communities unstable. **Humans have been learning from wildlife bio-diversity for centuries.**

Look at this **Ex:**

<http://www.ask.com/health/hlvideo-5min/how-to-cure-tooth-decay-2-of-3-145260329>

How many of you suffer from toothaches?? do you realize how ill you can get if you don't listen to these early signs. Ask yourself how many of you have dentists that have told you this..

As in **Natures` food/medicine from the world`s indigenous offerings;**

Chinese/India, Native Americans, **Natives everywhere are a good example**, how people gained simple respect for all life, seeing how each contributes to environmental services that we humans sustain from;

As **we observed what animals ate for food + medicine**, how plants grew in various soil in different seasons, how other species of insect/animals contributed to replanting plant/tree species, attracting what species that humans would hunt, what herb/plants did what for food/medicine + over time we have a great wealth of understanding of how different species sustain with different behaviors, + when used together can produce a great affect. This list goes on.....

Ex: When Calum Stevenson from Oregon Parks was kind to tell me in June of 2012, a review will be completed + most likely sea palm seaweed will no longer be free to forage for personal use. Due to having no resources for a good study, + they feel it does not come back as well as others. i said **no good science that is wrong**.

Where **presently the policies for conservation/preservation in place are incomplete**. So to focus on their role, due to seaweed being on their properties down to extreme low water, than they have to say no one can pick sea palm is better than to have it over picked.

In hearing this bells + whistles went off;

Not just my concern with no longer being able to pick a very nutritious local wild food, which we picked very carefully in respect to its sustainability. We do see that others pick patches of all, not picking correctly as in any subject when no awareness shared communally. But to see the farmed fish/processed food that is unhealthy, packed wastefully, traveling inefficiently **across the planet taking without fair trade, as locals go without as land/water/sea rights are grabbed, makes no sense to us**.

Plus i state, we don't have US/Oregon resources for good science;

To be written/equated/integrated/recreated, when yet we can define words from people not coming together with common sense. To than choose language that best protects + makes **people universally aware to use as good tools, with indigenous native local `ways that have experiences built upon over time from the beginning.** Which we can start on the forum.

So if this is not in place, as there are many land/sea/fresh water regulators that control each area, + i must say makes it very inefficient to work simply with the natural world, due to all these layers, + lack of communication to all. Calum states there will be another open public comment period after the Dept of Justice makes a decision.

How many of us are even aware of these rulings + open comment periods??

We truly need to better reach out to locals + those of us that come to town + try to live as a local. Not to mention the influence from those that just pass thru.. **project osic** with students coming into + with community **welcome newcomers + show them a `way as you introduce your community.** These natural experiences no one wants to miss as all are welcome as locals, no matter how long you stay. Preventing any kind of negative effect.

As a human species that co_evolves with these ongoing natural experiences, we can, maintain discipline with sharp sensors as we tune into our self - sensory observation in the moment +retain cognitive presence of our mind + body reaction vs. belief running off leaving our body behind or another regulating. Rather **we want to gain sensitivity to feel each life we are interacting with + to feel it`s limits + ours, as we can learn these early signs, adjust + stay calm..**

Where is this awareness shared?? Just look around you + once we change our mode of energy, we then more easily perceive it. For when on a role with stimulus, these light cues go right by us, as our hormones are out of balance, leaving us dull, if we pursue without bringing self to calm.

When we cannot self-develop locally, how can we even think that we can tell another or control others afar? This carries forward into all facets of our daily living, yet many pass on unbalanced behaviors from generations, while yet others are very in tune to each natural offering;

See post on Peace Action West + how these early signs lead to our ability to work thru serious issues. These folks offer good variety of thought + do their homework as they keep us informed of these missing, worn torn threads to share with Congress to support peaceful ways;

[OpEd: Americans ready for Obama to end Afghanistan war/](#)

May 2, 2012

<http://blog.peaceactionwest.org/>

Students can follow thru with community members aiding options to trigger thought for applying within them self + with community offerings/experiences locally + afar.

Do you see aggression is not in our human design, when maintaining a healthy balance, as a living organism on this living planet, if we are free to interact with the natural world which we are dependent on.

That means when any one is aggressive, they are interfering in another's ability to self-sustain + become aware of own responsibility;

to build one's life as each walk it in to their opening, which is what we want to support each to do.

To walk our life in a healthy state with mindbody in balance, we depend on our balanced environment, which all is interdependent on. This is our best medicine:

The earth will take care of itself, as it continues to co_evolve with the universal process. But we as humans seriously suffer or **we have a choice to harmonize + aid the choice for those unable** to free themselves from misuse/abuse. It does make a difference if we do it together as a human family.

We are dependent on the exchange of genetic bio-diversity, + that requires balanced wild ecosystems to sustain our local bio-spheres. So each than can fulfill our local + global obligation to than link. Which then will co_evolve the human species. Which local biospheres are not balanced for the amount of local people in some communities, as well many cannot work them. Which we as a human species require to interact seasonally with all life + do it sensitively. For **when unable we gain no awareness within our self or with each other, nor are our needs met.**

Plus i repeat **we cannot isolate ecological corridors.**

We feel it is **wiser to share awareness to be sensitive, gain skills to live + understand** our personal obligations to simply live, within our local species boundaries. To sustain their/our balanced behaviors + preserve, working with gauges such as agro-ecology as a base. As we restore our communities to small natural cooperatives, better suited to gain this natural balance `boon with, so our natural community can sustain itself, so as to sustain us in harmony..

Where you maintain discussion, bring early signs to your community cloth/table;

EX: [Rebecca Griffin](#) states at Peace Action West (PAW) in support for groups coming together for diplomacy with Iran. PAW folks do their homework on the great amount of detail that goes on in government, yet many are unaware of these processes;

Peace Action West joined a broad coalition of groups leaders to support diplomatic engagement with Iran and oppose a disastrous military intervention. The letter to Congress begins:

We are deeply concerned by the increasing prospects of a disastrous war between the United States and Iran. At a time of dangerously escalating tensions, we urge in the strongest possible terms that any legislation advanced by Congress support a diplomatic resolution to the standoff and make absolutely clear that there is no Congressional authorization for military force against Iran.

See link for full letter;

<http://blog.peaceactionwest.org/2012/04/05/peace-action-west-joins-groups-calling-for-diplomacy-with-iran/>

Do you realize how helpful students can be to help us stay in real time with all these realities that are now consuming our resources out of control??

Based on indigenous `ways that work translated into a good working science, we can harness this disassociated energy now. As we hold ourselves accountable, locally + afar. + Build this archive that all can trigger facts to bring home + apply as each work with their specific ecosystem/subject sharing this process for developing solutions.

So each local community reflects + than do their homework, as students are/+ focus direct + aid their people left behind. With good hands on until rehab organized, so, all equally come to cloth/table platform to make local decisions. Holding self- accountable locally + with effects left afar as each follow thru appropriately. Which truly requires a cooperative effort, in order to simplify making working, ecological sustaining+ harmonizing community`s.

To regain what was lost is not as important, we can't bite our elbows. **What is more efficient is to cooperatively assess what is now, as we bring our self to be present in the moment, tune within + understand if dull sensors. To then sharpen + ask for support. As others reflect solution a.s.a.p..** + Share in this restoration `plan for each community to go figure.

As with the several hundred tribes in US coming together, buying land to restore it back to the native `way is a good thing. No longer just talk of the `way it was, rather co_evolve it + bring it alive in the moment + `boon with it now.

Only this walking side by side with our children, will they learn to walk forward alone, as we admit the truth + together restore our potential. Realizing we are not alone + cannot just be concerned of our backyard.

For our sharp sensors allow us to perceive locally + afar, so we must all then responsibly apply, or many end up with mixed signals, unable to decipher as it steals from our present ability to comprehend. Leaving more baggage..

But many are with a tongue that has ideals that need deciphering into good science;

Many have lost the dialog + the `way of simple living with the natural world.. Many are confused with western ways that don`t work.. **Many bring forth the good + apply it now as they stay updated with acts without hung up on words or how it is titled..** Many are lost in fragmented science verbiage out of natural balance yet try to regulate..

See all the fragments?? Are you experiencing any of this??

It is **good for locals to network locally + afar,** for many locals as in John I met the other day fishing off the jetty as he always has done, had no clue of our restrictions soon to be on seaweed, nor conflict between commercial fisher folks + marine reserve or wave energy coming in locally. + Stated **why someone doesn`t post a sign, make this info more readily available** + thanked me for this work, for he says he is always looking around to stay on top of stuff.

In this walkabout all in each community can organize how best for sharing updates, post a simple message board;

The **forum/archive discusses a message board in detail** so please take a look to trigger your thought so all are aware of issues at hand, as they are prioritized + simplified for understanding. Not to take responsibility away from people, or do

homework for them, but to aid support while understanding + processing, while each rids baggage so as to be present + than act responsibly.

These decisions should fuel enrichment + self-empowerment, or they are incomplete + need to be edited..

Please don't let us mislead you. We share a lot of information to reflect with that we think can be very helpful. But no way can anyone just copy anything. For it takes each of us to do our homework as we apply it to our self/our community, for each is different. Everywhere we look in every community we have experienced, we get fragmentation of good + bad. This is why we felt this archive worked by all of us could put together some true application that makes common sense out of good science that can be used in like ecosystem/subject as it is fine tuned. It feels so good to make a connection even if it is afar, then to get clear to apply it locally.

Making it easier for you to bring home what can make your community more efficient. When it does then come back + share + we all will inch our way to harmony as many do.

Rebecca from Peace Action West, is right it is **not efficient to have street protests**, it is better to be clear + connect with specifics that are already on the board with legislatures, so we all get on the same page with the same shade of color. If we are to continue to **restore our government process as part of our community**, for us all to be part making democratic decisions thru this clearing process..

It is up to each of us to define these channels to organize support for local awareness, so **even with local foraging for personal use; it is our right + should not be stopped, due to other people's abuse. Yes we see others that over pick sea palm but that is an awareness + enforcement issue. So we can't confuse issues if we are too resolve them.**

Plus this is local wild nutritional food that has been growing for quite some time in abundance. We have a right to sustain from it;

The whole ideology of this **project osic** is to show how locals can correct misuse/expose what is unaware/stop abuse; educate all those around the board from people in all entities. Actually simplify removing layers. Showing how we can build working efficient sustainable communities that we migrate within each season, for natural offering, as students **show tallies of issues + show detail of whom is involved** resisting as well skilled with sensitivities. As they follow thru with what it takes for understanding, ridding the issues.

Do you see how helpful this archive can be? It will help each define to make own organized platform to link with.

To some it is **natural common sense** for a commercial fisher folk to look at their fish finder + not take them all, or the many other natural old `ways of observing before technical equipment designed or even made mandatory from regulators, which we don`t support all. For many have paid a lot when yet other cheaper means are available, or even download free open source on internet.

The commercial fishing industry did fine without technology + those `ways can be shared so that new combers aren`t allowed to fish until they become aware, same with a farmer or a politician or a doctor, etc.

The **present many curriculum`s are from bad science**, producing degrees without common sense to be self-reliant + to be applying as one interrelates with local community, exploring + networking afar. **US Education Dept. does not control each state`s curriculum; we all are free to co_evolve with what can work as a local community..**

This is what we can do now for ourselves, + for our children as we get involved to restore our local community`s potential.

Ex: email to (w/typo corrections) 5.14.2012 **addressing 2012 Farm Bill**

Dear Senator, Congress + Barack Obama,

When (should not be the question, rather it is your responsibility now to see that these issues are made clear + policy enacted, for it is long overdue) the Senate should consider the next Farm Bill ASAP, I urge you to defend progress made in the 2008 Farm Bill and to protect critical programs that we need to help farmers transition to organic production;

People see Wal-Mart **Ex: please go sit down + observe none of these ill people should get US aid without again more positions being filled for them to become aware of how they are producing their own illness.** Look at their shopping carts, already extremely overweight, some unable to walk, sores of diabetes, etc.

All food related, meanwhile every person with a degree/skilled or not/as in doctor, we invite to do a walkabout with students throughout their local community for extended education, as they/you then see your patients/students in their home turf. See the affects you leave on them.

With all our abilities to understand our misuse/abuse, No more should anyone continue to make funds on another person`s illness without them prescribing an understanding.

Professor Marion Nestle at NYU + her students deciphering the 2012 farm bill say it is totally incomprehensible to you legislators + her. They have been trying to decipher it;

The **farmers are penalized for growing vegetables + fruits, anything beyond the commodities**, which is wrong! A balanced healthy natural diet is not being made available in many communities as well their school lunch programs. Leaving people ill + expensive western medicine/pharmaceutical companies surge in profit as people gain at the loss of other`s ill health.

This is prehistoric, for the farmers/people in Port Townsend, WA + elsewhere are working with school administrators + students, to become aware as they interact with the local farmers. **Creating balanced natural grown school lunches, etc. with success.** Which all communities should have, without even questioning.

Not to mention **our international interrelations should be sharing what works;**

Supporting all to be self-reliant for their own local food sovereignty, economic development living local, not aid dependent from food being brought in from afar, or traveling around the world for packaging. **Professor Miguel Altieri of Berkeley, CA can show with his agro_ecology curriculum created as he works out in the world with indigenous `ways that work. He sees the world food crises very clearly + shares this insight on his web page.** i can't tell how much goodness this man has to offer, yet why is it people do not listen?

Patches` of very aware people live within nature`s limits, yet other pockets` are still without. **We welcome you to experience project osic,** as we continue to reach out for international school bulk emails, along with US community representatives without schools along with international. So we can do this mail out, putting all on same page as all restore sound ecological working communities that harmonize. Where people sit down eye to eye + make decision.

No matter how you obtained this information, please share with your local school board.

Folks this is long overdue. We can link as we build **project osic** to share archive of these strategies, transitions + schematics as you welcome your students to come out of schoolroom into + with you for your community.+ Restore together self-reliance by building your local community`s potential + networking sharing what works via like ecosystem/subject.

This gives us all the fuel to continue to explore as the student within all surfaces.

US Ed Dept has given us some their school emails, so please if have contacts for international + reps for those communities without, either share this, including US with them or please post school bulk/emails on our forum subcategory:

<http://i-come-to-talk-story.3220728.n2.nabble.com/place-bulk-school-email-list-community-representitive-with-no-school-link-here-f7473806.html/>

Students will aid people to not put another layer on top of layers, as presently are. Rather all of us please take off your hats + as a local community participant please rid your baggage + go within to see how your position/policy can aid this local efficiency now. For many people/other species are being negatively affected by others misuse/abuse locally + afar.

We don't want to leave anyone left behind.

This is a nightmare to see as in Midwest farms in US now proving fertilizers where over sold to them, thinking they needed it as they depleted all the natural grasses/wetlands leaving Nitrogen to run down the river into gulf producing dead zones for marine life. Now they see that + are replanting grasses + rebuilding wetlands to filter N even though using less.

Yet **why should they be able to even do large monocultures that are destructive vs. rotating small crops, using agro_ecology methods.**

US government/business/people, supported bio tech companies with bad science being paid for. This is wrong. + It keeps popping up in our document, in hopes of people coming together + putting an end to this issue.

We have bright minds that can focus as we share the negative with investors in a tapering transition as they stop supporting this wrong doing + more;

GMO seeds, inability to not save own seeds + stop sending foods back + forth to package around the planet. It is wrong that curriculum has to juggle these issues, for the students are already being cut short at school due to lack of

funding, meanwhile investors make a lot of funds off these ill practices. This list goes on.

What is good is to have local `plans where each community restores natural species + work wild to sustain/restore genetic bio-diversity, passing on the local seeds, not to mention fresh natural grown local foods/medicine + fish as in working with the commercial fisher folks to do a cooperative directly + only with the state as in F+W as they together sort out the regulations for sustainability. So equally all come to the table, eye to eye working efficiently with respect to all life. + Simplify the organic mode so it is not so costly, etc.

As i try to make sense of the Executive order from Barack Obama`s ocean policy + energy programs, **we still have layers of people`s values that interfere while more in marine reserves want to put another layer of regulation, yet commercial fisher folks are still not an equal voice** + layers over regulate interfering in their work now, making this complex, when it could be simple.

When yet these **cooperatives can simply be formed + supported by students/people locally as they supply them,** to rid the dysfunction.

What is happening here is people are fed up + tired + have no trust in legislators/regulators, meanwhile it appears Barack has tried to create a system where locals take part in making the reality, yet it is not happening for many won't take part due to being tired + disgusted, feeling they are not being listened too. + The few that do are without good sustainable science that was experienced yet not recorded. We need to rethink + make good science a tool that we live with as needed. So at any time an issue comes up, we decipher, transcribe + gauges in place will then resolve..

In many communities, there is not even a small farmers market;

Let alone foraged perennial patches or wild set aside spaces that are being worked or even a community shared garden. Rather in Florida their where many expensive homes with people living with air condition, curtains closed + having

food brought in. The local markets had no fresh natural grown food. Other patches` had farmers market. Yet over all US is fragmented leaving food deserts when yet others in abundant of lush fresh natural grown.. Vs. as once was done in China with small buggies going from house to house with fresh grown food. Which people in patches are creatively coming up with much good realty we all can do.

Maldivians lived off from what they acquired from the ocean. They respect the seas and nature itself. In turn, this has led to the **sustainability of fishing** and the wealth of the seas, which has been passed from generation to generation. To quote the words of a former president of Maldives here, “**fishing is the life blood of our nation**, it is inborn. From the soil on which we live, to the sea around us, it remains an integral part of our existence. Fishing, and our country and its people, (are) one and shall remain inseparable forever”. This emphasizes on how important fishing is to the people of the Maldives. Fishing is the **second biggest industry** in the Maldives, with a workforce of 22000.

Students can create modes of development for good market, good business as those leaving negative effects go thru the tapering transition with support from community that perceives solution, making a win win situation, turning wrongs into rights..

This **requires many positions that can be filled as people offer a helping hand + in that will become aware** + control them self for the respect of life. It can be simplified.

Producing large farms totally distorts the human mode of energy, destroying life giving principle for life we as a living organism is dependent on for our good health, to co_evolve, creating the many ill people, not to mention the processed foods still being sold. Coming from a long ways away, interfering with locals ability to self-sustain.

Local food sovereignty is the only way to protect the commons + to prevent land/sea from being grabbed. La Via Campesina can show what is happening

throughout the world negatively from US + other so called developed countries. Yet many local people are yet to be aware of their own misuse/abuse.

i`ve told this to Barack + he says study what they are doing with energy, + as i read i see this wrong doing continue. Then months later the same letter of same subject responds again..

Every house once define the house should remain, due to not being in a Trans boundary path + or if so could be supported by community to rid, + if local does not agree, then when move it could happen, etc. but each one could have a solar panel, vs. hundreds of them in 1 location interfering in life. Including the locals that aren't usually the ones do_in the work.

Our point is we must understand how we cannot just isolate a job without working to not fight our self, as many now are working against what sustains our life, working against our true ability to center with mindbody being in balance. For we must taper into what sustains us + we can restore + do it efficiently, once you understand + share.

Yes we can have complete self-satisfaction as we daily have our hands on what sustains us, working cooperatively, resolving negative effects that many of us have been part of unknowingly, locally + afar.

Wave energy put in interferes in natural life, as well those that have worked it efficiently now have to be burdened to have to ex: here locally in Charleston area, have their long lines go around it.. + Barack i personally experienced here in Oregon how you + governor rushed folks to lay out the land to lease, when it almost was given away. Yet you still miss the point it should be for locals if exist at all, + good science should be followed up??

Legislators are fragmenting bad science + many people being confused are not taking part, which is wrong. Our processes need to be simplified. We should not be buying food /fish from afar, we should be raising locally + naturally.

You people should not allow this + if you do, it only proves the dysfunction of existing government. Which we ask **what is your position? Why is it that you are not taking part of your local community** + seeing this not in place?

If you look at what US citizens are doing in ex; Honduras, it is very wrong, yet US does not hold locals accountable afar. The lands that are being grabbed + manipulated by the Honduran government, + are taking land from locals, raising animals/deforesting + than bring profits back to US. Same with other countries. This is very wrong.

This is very wrong for when Barack told India to put in a Wal-Mart for these reasons. It is bad enough our US is not living local in every community, let alone pushes these unethical practices on other farmers/people afar.

The **biotech industry/pharmaceuticals/false green movement + war mode economy is wrong.** History shows the earth should actually be hotter, so many have got a wrong perspective with global warming + response to it, as many are marketing upon it.

Everyone should be able to locally in a tapering transition remove large monocultures from their community, as well GMO`s + toxic fertilizers, toxic spraying of chemicals over fields + over new seed lands as in forestry replanting, when toxic chemicals blow into communities, stop asap.

We have better natural farming + an understanding of this transition for alternative support to have small farms/forage locally, vs. as in the Dept of Justice now defining supposedly by June of 2012 of the inability to forage for sea palm seaweed in Oregon for personal consumption which is wrong. Which we feel is fragmenting bad science in the `way it is reviewing, etc.

Due to as in i`ve been told no resources locally to study the sea palm + feel it does not come back that fast, due to their limited studies. This is not true, for people can learn to be sensitive to life + harvest it accordingly.

End part 1

although I have a lot of stuff unedited, + unable to get part 2 completed. i wanted to have this uploaded for 10.26.2012 due date. i do hope you can edit out for you + your community. To see the gest of this project + apply what can for the Civil Society Dialogue with the High-level Panel on the Post-2015 Development Agenda;

The UN Secretary-General's [High-level Panel of Eminent Persons on the Post-2015 Development Agenda](#) (#Post2015HLP) will meet in London from 31 October to 2 November 2012, and will focus on the issue of household poverty. This online consultation space provides the opportunity for civil society and other stakeholders to input directly into the conversation of the #Post2015HLP in London, as it addresses the same themes and questions the Panel will tackle at their meeting. **The deadline for contributions is Friday, 26 October.** A summary of substantive contributions will be produced by the [UN Non-Governmental Liaison Service \(UN-NGLS\)](#) to be provided to the #Post2015HLP for the London meeting and published online. A longer report will be disseminated by mid-November.

You can see the rest of this here;

<http://www.worldwewant2015.org/Post2015HLP>

please watch for **part 2** to be uploaded, for what is + what we can do about it, so we don't have to reinvent the wheel..

please post all comments in appropriate subcategory + if directed to us, please comment on talk talk subcategory;

<http://i-come-to-talk-story.3220728.n2.nabble.com/>

thank you, sincerely kara j lincoln speaking for our combined` effect..
